

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Senior .NET Software Engineer with 8+ years of hands-on experience designing scalable backend services, complex third-party API integrations, and high-performance data pipelines in fintech and SaaS environments. Deep expertise in .NET Core, Entity Framework, SQL optimization, multithreaded programming, and clean architecture. Adept at building transaction-heavy systems, integrating payment providers, and deploying containerized services using Docker. Proven track record delivering robust features independently in agile remote teams. Passionate about engineering reliable platforms that power CRM, compliance, and financial applications.

TECHNICAL SKILLS

- ❖ **Languages:** C#, .NET Core, ASP.NET, JavaScript, TypeScript, T-SQL, Python
- ❖ **Frameworks:** Entity Framework Core, Dapper, MediatR, SignalR, AutoMapper
- ❖ **Database:** SQL Server, PostgreSQL, MySQL, Redis, MongoDB
- ❖ **Cloud & DevOps:** Docker, Kubernetes, GitHub Actions, Azure DevOps
- ❖ **Tools:** Visual Studio, Postman, Swagger, Git, Fiddler, ELK Stack, Seq
- ❖ **Concepts:** Multithreading, Async Programming, SOLID, Clean Architecture,DDD
- ❖ **APIs:** REST, WebSocket, OAuth2, Payment Gateways (Stripe, Braintree, Nuvei)
- ❖ **CI/CD & Monitoring:** GitLab CI, Grafana, Prometheus, Sentry

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led backend development for a fintech CRM product, delivering over 30 high-impact features built in .NET Core with modular service architecture and robust REST APIs.
- Developed scalable microservices processing up to 500k daily financial transactions with Entity Framework Core, PostgreSQL, and Redis for caching and concurrency.
- Integrated third-party APIs including Nuvei and Braintree for real-time payment processing, chargebacks, and settlement reconciliation across EU and US markets.
- Designed multithreaded modules handling asynchronous KYC verification flows and identity validation using parallel data pipelines with minimal latency.
- Refactored legacy ORM queries improving execution time from 7s to under 400ms by applying composite indexing, pagination strategies, and optimized joins.

- Automated CI/CD workflows via GitHub Actions and Docker containers, enabling zero-downtime deployment and rollbacks for over 15 production services.
- Collaborated with cross-functional agile teams across Europe to ensure smooth sprint delivery, backlog grooming, and architectural planning.
- Performed in-depth performance profiling using dotTrace and SQL Profiler, eliminating bottlenecks in data-heavy modules under peak load.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Engineered RESTful backend systems for a transaction-heavy loyalty platform using ASP.NET Core, handling over 1 million user accounts and concurrent redemptions.
- Developed CRM modules for campaign and rewards management with PostgreSQL, dynamic data models, and secure access controls integrated via OAuth2.
- Collaborated with front-end engineers and designers to enable seamless customer workflows and mobile API integrations.
- Built integrations with marketing platforms and SMS/email providers to automate notifications, user targeting, and campaign analytics pipelines.
- Applied CQRS and repository patterns to enforce modularity and codebase separation, reducing tech debt and onboarding time.
- Integrated ELK stack for production logging, reducing debugging time by 40% through custom filters and trace identifiers.
- Deployed Dockerized applications to AWS ECS and managed infrastructure via Terraform modules under DevOps supervision.
- Introduced automated load testing strategies with k6, identifying and resolving a 28% throughput bottleneck in promotional campaign endpoints.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built a cloud-based invoicing and accounting platform using C#, .NET, and MySQL, processing recurring billing events and dynamic tax computations.
- Integrated fraud detection and audit tracking modules that logged suspicious activities and anomalous billing behavior using ELK and ML flag rules.
- Collaborated with banking partners to implement SEPA payment gateway APIs, implementing strong error handling, retries, and response validation.
- Implemented multithreaded components for real-time balance reconciliation and ledger synchronization across financial endpoints.
- Applied Clean Architecture and DDD principles, significantly reducing module coupling and allowing independent deployment of critical components.
- Optimized batch data jobs and stored procedures that previously took hours down to 10–15 minutes by rewriting join-heavy queries and indexing strategies.
- Led internal code reviews and hosted .NET best practices workshops, improving team adoption of design patterns and unit testing.
- Worked with the QA team to integrate test automation for backend API endpoints using Postman and custom assertion scripts.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Developed custom e-commerce CRM features in .NET MVC5, enabling dynamic product listings, tiered pricing rules, and customer segmentation tools.
- Integrated PayPal and Adyen payment modules, handling webhooks, refunds, and dispute resolution flows with secure token authentication.
- Contributed to full lifecycle delivery, including ticket estimation, sprint planning, and post-release monitoring with Grafana.
- Participated in architecture modernization efforts by replacing tightly coupled business logic with service-layer abstractions and factory patterns.
- Migrated existing XML-based reporting system to a JSON-based asynchronous report engine using WebAPI.
- Improved application test coverage to 85% by writing xUnit test cases for core services and mocking external dependencies.
- Introduced CI pipeline using TeamCity for staging deployments and nightly test runs across environments.
- Resolved performance bottlenecks in product listing pages by implementing lazy loading and pagination for API requests.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in building a CRM for small banks using C# and Windows Forms, contributing to backend modules for user permissions and activity logging.
- Created automated scripts for data import/export between SQL Server and Excel to support client migrations and back-office operations.
- Designed a multi-user dashboard with real-time event updates using SignalR and JSON push notifications.
- Implemented role-based authentication and session timeouts to increase security for internal tools used by compliance staff.
- Participated in daily stand-ups and sprint planning as part of the agile team contributing to weekly release cycles.
- Reviewed legacy code for memory leaks and improved garbage collection behavior across several services.
- Wrote internal documentation for deployment procedures, testing steps, and API schemas for onboarding new devs.
- Built proof-of-concept components for a planned web-based version using ASP.NET MVC and Bootstrap.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- 🚦 Microsoft Certified: Azure Developer Associate
 - 🚦 .NET Microservices: Architecture for Containerized .NET Applications (Microsoft eBook Certification)
 - 🚦 C# Advanced Topics – Delegates, LINQ, Events (Udemy)
-

PROJECTS

- ✓ **FinCRM Platform** (2022–2023)
Built and maintained a high-load CRM used by fintech clients to manage KYC, transactions, and customer messaging. Key features included data syncing, real-time event pipelines, and multi-provider payment integration.
- ✓ **MicroPay Gateway** (2020)
Engineered a .NET-based microservice for processing payments via Stripe, Nuvei, and PayPal. Focused on failover support, fraud scoring, and webhook security.
- ✓ **KYC Identity Service** (2021)
Built a C# service with multithreading for document OCR, validation, and provider integrations (SumSub, IDnow). Reduced user onboarding time by 50%.
