

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile and security-conscious software developer with 9+ years of experience in server-side engineering using C#, .NET, Entity Framework Core, and PostgreSQL. Demonstrated expertise in building performant REST APIs, browser automation, and microservices in secure and containerized environments. Passionate about evolving complex systems, improving performance, and writing robust, testable code for scalable enterprise applications.

TECHNICAL SKILLS

- **Languages:** C#, .NET 6/7/9, JavaScript (ES6+), TypeScript, SQL, Python
- **Frameworks/Libraries:** Entity Framework Core, Vue.js, ASP.NET Core, D3.js, GraphQL, REST APIs, StoryBook
- **DevOps & Deployment:** Docker, Kubernetes, GitHub Actions, GitLab CI/CD, Kestrel, NGINX, AWS EC2, AWS RDS
- **Database:** PostgreSQL, Microsoft SQL Server, MongoDB, MySQL
- **Tools & Platforms:** Git, Jira, Linux CLI, Redis, RabbitMQ, NATS, Azure DevOps
- **Security:** XSS/SQLi mitigation, OWASP Top 10, Authentication flows (OAuth2, Azure B2C), HTTPS, JWT
- **Testing:** xUnit, NUnit, Moq, Postman, Swagger, Playwright, Cypress
- **Other:** Agile/Scrum, Clean Architecture, SOLID, Domain-Driven Design

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Developed scalable .NET 7 microservices deployed in Docker and orchestrated via Kubernetes, improving CI/CD and deployment speed across multiple environments by 40%.
- Designed secure RESTful APIs with Entity Framework Core and PostgreSQL, leveraging code-first migrations and writing complex LINQ queries optimized for performance.
- Implemented end-to-end integration with third-party services using OAuth2 and custom JWT authentication flows to meet enterprise security requirements.
- Enhanced frontend using Vue.js with TypeScript, implementing StoryBook-driven component development and integrating real-time UI updates using websockets.
- Spearheaded transition to Kestrel-based .NET hosting over IIS, reducing memory usage by 25% and increasing throughput for security scan services.
- Built and maintained GraphQL endpoints for dynamic data retrieval while enforcing strict schema validation and access control policies.

- Applied DevSecOps principles including container scanning and vulnerability auditing across CI/CD pipelines to ensure hardened deployments.
- Mentored junior developers in code reviews, architectural decisions, and debugging sessions to foster continuous learning and code quality.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Led the development of REST APIs using .NET Core and PostgreSQL for managing marketing campaign automation used by 50+ enterprise clients.
- Rewrote legacy components in C# to support multithreaded processing of campaign metrics, decreasing processing time by 60% during peak loads.
- Designed a secure internal API gateway with token-based authentication to manage API throttling, IP whitelisting, and client-specific access rules.
- Built modular Vue.js interfaces integrated with RESTful services and WebSocket updates, improving frontend responsiveness and user interaction.
- Refactored database schema and implemented Entity Framework migrations to ensure seamless updates and backward compatibility across releases.
- Containerized microservices using Docker and deployed on AWS ECS with automated CI/CD using GitLab, enabling blue/green deployment strategies.
- Integrated logging and monitoring tools like Serilog and ELK Stack, helping to detect and resolve production issues faster through traceability.
- Documented API contracts using Swagger/OpenAPI and implemented automated tests for all major endpoints using xUnit and Moq.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built full-stack applications using ASP.NET MVC and Vue.js, managing complex workflows such as invoice reconciliation and vendor management.
- Implemented PostgreSQL functions and triggers to enforce data consistency and support batch operations over large datasets.
- Developed custom middleware for centralized error handling and request logging across all APIs, improving traceability and exception management.
- Enhanced data security by introducing input validation, anti-XSS filters, and parameterized queries to prevent SQL injection attacks.
- Led frontend component development using Vue.js and Tailwind CSS, ensuring cross-browser compatibility and accessibility compliance.
- Participated in sprint planning, grooming sessions, and daily standups, contributing to increased team velocity and improved delivery estimation.
- Built a CI pipeline using Jenkins and Git, automating builds and test suites across multiple development branches.
- Actively participated in client demos and requirement workshops to refine features and align implementation with customer needs.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Maintained and enhanced internal tools used for document parsing and classification in regulated environments using C# and Windows Services.
- Developed REST APIs for document lifecycle tracking and access control enforcement, enabling compliance with GDPR data retention policies.
- Migrated parts of the backend from .NET Framework to .NET Core, reducing dependency bloat and modernizing code structure for future scalability.
- Wrote unit tests and conducted smoke testing prior to releases, contributing to over 95% issue-free deployment success rate.
- Designed basic frontend features with Vue.js to manage data visualization and report downloads for internal users.
- Improved runtime performance of key workflows by restructuring nested loops and optimizing database queries.
- Worked closely with QA to develop automation scripts for regression testing using Postman and SoapUI.
- Participated in cross-functional team discussions to recommend architecture improvements and help roadmap upcoming technical initiatives.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Contributed to the development of an internal tool for processing compliance documents in regulated environments using C# and SQL Server.
- Assisted in writing SQL procedures and designing relational schemas to support efficient indexing and referential integrity.
- Created internal dashboards using JavaScript and D3.js for visualizing data patterns and operational KPIs.
- Built custom form validations using JavaScript and server-side logic to enforce input security standards.
- Shadowed senior developers and actively contributed to debugging sessions, learning software testing and version control techniques.
- Wrote documentation for internal APIs and participated in daily scrum meetings as part of an Agile development cycle.
- Supported migration of old codebase from VB.NET to C#, enhancing maintainability and consistency.
- Developed basic REST endpoints to support mobile application backend for file uploads and search functionality.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate (AZ-204)
- ❖ Secure Coding Practices – OWASP Academy

PROJECTS

✓ **Security Engine Refactor – Sensidev**

Led a company-wide initiative to refactor the legacy scanning engine into modular microservices using .NET 7 and PostgreSQL, enabling real-time parallel scanning and reducing time-to-scan by 40%.

✓ **API Gateway for AuthN/AuthZ – Syscom Digital**

Designed and implemented a centralized API gateway with rate-limiting, JWT validation, and IP filtering to secure client integrations and maintain SLA compliance.
