

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced and versatile Senior Software Engineer with over 9 years of experience designing and delivering scalable .NET applications with a strong focus on cross-platform development using C# and MAUI. Proven track record of integrating cloud services and IoT devices into secure, high-performance applications for smart ecosystems. Passionate about intuitive UX, performance optimization, and driving innovation in connected home technology.

TECHNICAL SKILLS

- **Languages:** C#, .NET, TypeScript, JavaScript, SQL, HTML5, CSS3
- **Frameworks:** .NET MAUI, Xamarin, ASP.NET Core, Blazor, Entity Framework, Angular, React
- **Cloud & DevOps:** Azure (IoT Hub, Functions, App Services), Docker, GitHub Actions, CI/CD, Azure DevOps
- **Databases:** Microsoft SQL Server, SQLite, MongoDB
- **Tools:** Visual Studio, Rider, Fiddler, Postman, Swagger, Jira, Figma
- **Protocols:** MQTT, REST, WebSocket, gRPC
- **Testing:** xUnit, NUnit, Selenium, Jest

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Architected and implemented a .NET MAUI-based cross-platform app that allowed seamless control and monitoring of smart home devices across Android, iOS, and desktop environments.
- Integrated Azure IoT Hub and device twin logic to manage real-time state synchronization between mobile apps and a cloud-hosted smart device fleet.
- Led a team of five in the design and implementation of device provisioning workflows and secure authentication protocols using Azure Active Directory and OAuth 2.0.
- Created scalable APIs using ASP.NET Core Web API with SignalR to provide real-time data updates and system event tracking for home automation dashboards.
- Improved application responsiveness by optimizing local caching and utilizing SQLite for offline storage with intelligent sync strategies when connectivity resumed.
- Mentored junior developers and conducted bi-weekly code reviews, enforcing clean architecture, SOLID principles, and efficient component reuse.
- Built CI/CD pipelines using Azure DevOps to deploy .NET MAUI apps to internal testing environments and Microsoft App Center for production deployment.

- Integrated mobile notification services (Firebase, Apple Push Notification Service) for real-time alerts on security breaches, device malfunctions, or energy usage spikes.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed mobile and desktop user interfaces with Xamarin.Forms and later migrated functionality to .NET MAUI as part of a strategic modernization project.
- Built end-to-end IoT-based campaign monitoring system, leveraging Azure Functions, Event Grid, and Cosmos DB to handle and visualize telemetry data in real-time.
- Collaborated with UX designers to improve UI responsiveness, accessibility, and adherence to material design guidelines for a smart retail ecosystem.
- Created reusable components and services using .NET Standard for integration into both marketing and industrial automation interfaces.
- Implemented encrypted communication layers using TLS and integrated certificate pinning on client apps to prevent MITM attacks on remote IoT device commands.
- Used Entity Framework Core for complex data models involving device logs, user preferences, and automation triggers with versioned schema migrations.
- Optimized SQL queries and introduced asynchronous programming models to improve the app startup time and responsiveness under concurrent operations.
- Led efforts to implement automated end-to-end test suites using Appium and Azure Test Plans to validate app reliability across form factors and network conditions.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

1. Developed enterprise-grade desktop and web applications in C# and WPF, gradually transitioning features into UWP and cross-platform MAUI architectures.
2. Engineered multi-layer application structures with IoC containers (Autofac) and MediatR to streamline command handling and reduce code coupling.
3. Integrated RFID readers and smart meters into building automation interfaces using serial protocols and custom driver layers.
4. Designed and implemented dynamic dashboards with real-time charts for displaying energy consumption, temperature tracking, and HVAC control.
5. Collaborated with data engineers to build ETL pipelines feeding telemetry from local networks to Azure Data Lake for analytics and anomaly detection.
6. Conducted technical workshops and wrote documentation for system integration teams to support deployment in multi-site smart buildings.
7. Refactored legacy WinForms modules into modular WPF and later into MAUI-compatible views for long-term platform alignment.
8. Assisted DevOps in containerizing services with Docker and setting up ARM templates for Azure resource provisioning during automated deployments.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Delivered custom C# Windows-based tools for smart lighting control integrated with BACnet/IP and KNX protocols.

- Built REST API connectors and synchronized device states with cloud-hosted control interfaces in early versions of Azure App Services.
- Created a simulation suite for testing and debugging smart devices in virtual rooms using mocked sensor feedback and user interaction modeling.
- Prototyped MAUI interface elements for field testing UI layouts on tablets used by installation teams.
- Automated internal testing using NUnit and integrated code coverage analysis into CI workflows to ensure maintainability across toolchains.
- Collaborated with external consultants to assess cybersecurity risks and mitigate attack surfaces in physical and software interfaces.
- Participated in codebase migration from .NET Framework to .NET Core for future-proofing and improved cross-platform compatibility.
- Developed PowerShell scripts to automate app packaging and installer creation for enterprise clients.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in developing a desktop client for controlling smart thermostats and lighting systems using C# and MVVM Light Toolkit.
- Implemented mock services to simulate cloud interaction and test API resilience during offline operation scenarios.
- Built a set of reusable XAML controls for user interfaces adaptable to kiosk and tablet layouts.
- Conducted QA testing on embedded systems software that communicated via Zigbee and BLE to Windows hosts.
- Wrote unit and integration tests using MSTest and participated in defect triage sessions alongside senior developers.
- Documented technical specifications for internal use, improving onboarding time for new engineering team members.
- Contributed to research exploring user interaction models for gesture-based smart home interfaces.
- Supported DevOps with manual deployment and configuration of internal test environments and development sandboxes.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ Microsoft Certified: .NET MAUI Developer (Unofficial – Internal Training & Certification Path)
 - ❖ Azure IoT Developer Specialty (AZ-220) – In Progress
 - ❖ Xamarin Certified Mobile Developer – Completed 2020
-

PROJECTS

- ✓ **SmartHomeX MAUI App** – Designed and led development of a cross-platform mobile app to control lighting, HVAC, security, and cameras via a unified .NET MAUI interface with offline sync.
- ✓ **IoT CloudBridge** – Built an Azure-based backend system to process and visualize telemetry from hundreds of connected devices using Azure IoT Hub, Functions, and SignalR.
- ✓ **EnergySaver Dashboard** – Created a responsive web dashboard that connects to smart meters and displays power consumption analytics with alerting via MQTT.
