

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven full-stack engineer with 8+ years of experience developing scalable web systems, cloud-native microservices, and integration layers. Passionate about building extensible SaaS platforms that bridge IoT and enterprise systems. Seeking to join a dynamic IoT-centric team to architect resilient C# services, extend API capabilities, and drive platform extensibility.

TECHNICAL SKILLS

- **Languages:** C#, TypeScript, JavaScript, Python, HTML5, SCSS, SQL
- **Frameworks:** .NET Core, ASP.NET, Entity Framework, Angular, Blazor, React
- **Cloud Platforms:** AWS (EC2, Lambda, S3, API Gateway, CloudWatch), Azure, Firebase
- **DevOps Tools:** Docker, Kubernetes, GitHub Actions, Terraform, Jenkins
- **CI/CD:** GitLab CI, GitHub Actions, CircleCI
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- **APIs:** REST, GraphQL, WebSockets
- **Other:** Microservices, Clean Architecture, Test Automation, IoT Data Processing

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented .NET Core microservices to power scalable features across logistics and mobility SaaS products integrated with IoT telemetry.
- Led the development of modular backend APIs enabling seamless third-party integrations via GraphQL and REST specifications.
- Migrated core services to AWS using ECS, API Gateway, and CloudWatch, achieving cost-optimized scalability and reduced latency by 35%.
- Contributed to custom SDK development in C# for partners to extend platform capabilities and automate real-time data consumption.
- Built Angular-based interfaces for integration UI components and contributed reusable web components to the shared UI library.
- Collaborated across product and platform teams to develop extensibility interfaces for data ingestion, system orchestration, and user-configured rules.

- Introduced CI/CD pipelines with GitHub Actions and integrated automated test coverage, improving deploy frequency by 50%.
- Refactored data processing modules to use event-driven patterns (Kafka) to enable high-throughput IoT event ingestion.
- Authored infrastructure-as-code templates using Terraform to automate environment provisioning across staging and production.
- Reviewed and contributed to partner onboarding documentation, SDK usage guides, and public API reference materials.
- Built performance dashboards with CloudWatch and Prometheus to monitor extensibility services and integration endpoints.
- Conducted security reviews and implemented API access controls to protect data integrations and enforce tenant-level isolation.
- Mentored junior engineers in scalable design principles, test automation, and platform extensibility best practices.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built and maintained C# backend APIs and Blazor-based components to power marketing automation and digital customer experiences.
- Developed integration adapters to connect platform services with external CRMs and analytics pipelines.
- Implemented Azure-based deployments with containerization, enabling automated scaling of campaign analytics services.
- Built custom REST APIs for telemetry data collection and integrated analytics dashboards for digital out-of-home (DOOH) systems.
- Contributed to the frontend development of a modular dashboard using Angular and integrated real-time web socket updates.
- Integrated CI/CD pipelines with GitLab and Docker to support frequent deployments and rollback strategies.
- Built an SDK for partners to programmatically trigger campaigns and submit analytics events to internal systems.
- Assisted in GDPR-compliant data workflows for user consent tracking and system opt-outs.
- Participated in daily stand-ups, sprint planning, and QA cycles under an agile delivery model.
- Created reusable GraphQL schema fragments and queries for campaign data analytics modules.
- Built and documented API reference guides for third-party integrators.
- Conducted performance tuning for API endpoints processing large-scale ad event payloads.
- Developed internal tools for campaign managers to visualize success metrics, click-through rates, and user journeys.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built backend modules in .NET Core to support enterprise asset tracking, routing, and inventory control.
- Developed Angular UI components with role-based access controls and responsive design elements.
- Implemented GraphQL interfaces for querying asset metadata and change history.
- Maintained CI/CD workflows via Jenkins and Docker for multi-environment deployment automation.

- Contributed to the IoT ingestion module to collect telemetry from RFID and GPS sensors.
- Collaborated with QA team to write integration and load tests for asset reconciliation workflows.
- Refactored existing RESTful APIs to improve payload compression and response times.
- Supported cross-platform API clients with a lightweight C# SDK wrapper.
- Delivered business-critical reports through dynamic PDF generation and embedded charting tools.
- Built data pipelines for asset usage forecasting and anomaly detection.
- Ensured services passed security audits and implemented OWASP guidelines for API hardening.
- Contributed to monthly sprint demos, code reviews, and architectural documentation.
- Worked closely with supply chain partners to define real-time sync and error recovery strategies.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed custom modules for CMS systems and ecommerce storefronts using ASP.NET and MVC.
- Integrated third-party APIs (payment, CRM) for bespoke web solutions for small businesses.
- Designed and deployed front-end pages in AngularJS with dynamic routing and state management.
- Created modular back-office interfaces for admin teams to manage transactions and inventory.
- Participated in API-first redesign of major client platform to enable mobile-friendly integration.
- Created reusable form components with built-in validation and localization.
- Maintained legacy PHP integrations while gradually porting them to C#.
- Optimized frontend rendering and bundling to improve time-to-interactive.
- Contributed bug fixes and enhancements across full stack components.
- Helped establish continuous deployment strategy using Bitbucket Pipelines.
- Documented integration patterns and technical guides for internal dev onboarding.
- Worked closely with QA to automate test coverage for order and checkout flows.
- Presented technical choices and trade-offs in client meetings.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Developed initial prototypes for an IoT-based logistics monitoring system.
- Assisted in implementing data processing logic for GPS and temperature sensor streams.
- Helped build a web dashboard using Angular and ASP.NET for live tracking of goods.
- Designed and tested early version of data sync protocol between local edge nodes and cloud.
- Participated in code reviews and learned version control practices with Git.
- Developed simple reporting tools to analyze sensor data patterns and failures.
- Experimented with integrating external APIs (e.g., weather, traffic) into routing decisions.
- Created test cases to validate data integrity across ingestion pipeline.
- Wrote technical blog articles to document engineering learnings during internship.
- Collaborated with senior devs to refactor early monolithic backend into service-based components.
- Presented weekly progress updates and participated in sprint retrospectives.
- Took initiative in proposing improvements to error handling and alerting mechanisms.
- Learned basic DevOps techniques such as log aggregation and container setup.

EDUCATION

Tallinn University

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
 - ❖ Microsoft Certified: Azure Developer Associate
 - ❖ Certified Kubernetes Application Developer (CKAD)
 - ❖ REST API Design by Microsoft (edX)
 - ❖ Advanced C# Programming (Pluralsight)
 - ❖ CI/CD Pipelines with GitHub Actions (Udemy)
-

PROJECTS

- ✓ **IoT Partner Integration SDK**
Developed a C# SDK to allow partners to plug into IoT telemetry streams, trigger webhooks, and submit event-based data to internal processing systems.
- ✓ **Add-On Marketplace UI**
Contributed reusable components and API integration logic for Angular-based marketplace to allow customers to install and manage extensions.
- ✓ **Cross-Cloud Deployment Toolkit**
Created IaC templates and deployment blueprints to automate service setup on AWS and Azure for clients using hybrid models.
- ✓ **API Monitoring & Alerts System**
Built an internal observability dashboard to track API usage metrics, integration health checks, and service uptime SLAs.
