

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Senior Backend Engineer with over 9 years of professional experience designing and developing scalable microservices-based applications using .NET, C#, and Azure. Proven expertise in distributed systems, asynchronous processing, messaging queues (Kafka, RabbitMQ), and modern cloud-native architectures. Passionate about crafting performant, fault-tolerant backend systems that support millions of users with minimal latency and maximum reliability.

TECHNICAL SKILLS

- **Languages & Frameworks:** C#, .NET, .NET Core, ASP.NET, Entity Framework, LINQ
- **Cloud Platforms:** Microsoft Azure (App Services, Functions, Cosmos DB, Service Bus), AWS, GCP
- **Messaging & Streaming:** Kafka, RabbitMQ, Azure Service Bus
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, Cosmos DB, Redis
- **DevOps & CI/CD:** Docker, Kubernetes, GitHub Actions, Azure DevOps, Jenkins
- **Design & Architecture:** Microservices, REST APIs, Domain-Driven Design, Event-Driven Architecture
- **Other:** Async/Await, OOP, Data Structures, Algorithms, SignalR, gRPC, OAuth2, OpenAPI
- **Testing & Monitoring:** xUnit, NUnit, Moq, Postman, Swagger, Application Insights
- **Tools:** Visual Studio, Rider, Git, Jira, Confluence, Datadog

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Engineered over 15 enterprise-grade microservices in .NET 6/7 hosted on Azure Kubernetes Services, improving system modularity and deployability across environments.
- Architected a real-time analytics module using Kafka for stream ingestion and Azure Functions for processing, reducing report generation latency by 70%.
- Integrated RabbitMQ-based message brokers to facilitate async communication across payment, inventory, and billing domains with guaranteed delivery and retry policies.

- Led the migration of a legacy monolithic system to a microservices architecture, leveraging Azure API Management, Azure App Services, and Service Bus.
- Designed domain-driven REST APIs following SOLID principles and secured using OAuth2, with Swagger-based documentation and automated testing pipelines.
- Improved system resiliency with circuit breaker and retry policies using Polly, reducing service failure impact in high-throughput scenarios.
- Spearheaded asynchronous workflows leveraging .NET `async/await`, Task-based parallelism, and background workers hosted in Azure Functions.
- Collaborated with DevOps to implement GitHub Actions for CI/CD and Azure DevOps for release orchestration, achieving weekly production deployments.
- Enhanced backend performance via distributed caching using Redis and optimized queries via stored procedures and EF Core profiling.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed scalable backend services using C# and ASP.NET Core to support advertising automation workflows, integrating Kafka for high-throughput event delivery.
- Designed multi-tenant SaaS APIs for CRM and campaign management with granular RBAC and token-based authentication using Azure AD B2C.
- Implemented real-time campaign tracking dashboard using SignalR and WebSockets, achieving sub-second latency across thousands of concurrent connections.
- Created a distributed task scheduling system for promotional content delivery, using Azure Functions, timers, and Cosmos DB change feed triggers.
- Maintained high system availability (99.99%) by designing services for horizontal scaling and implementing health checks and graceful fallback strategies.
- Applied advanced OOP principles and design patterns (Factory, Strategy, Mediator) to enhance backend maintainability and testability.
- Led incident analysis sessions post-deployment and implemented telemetry with Application Insights for root cause tracing and metric visualization.
- Conducted peer reviews and mentorship sessions on C# performance tuning, async programming, and advanced LINQ optimization.
- Collaborated with frontend teams to design API contracts and ensure consistent versioning through OpenAPI documentation and consumer-driven tests.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built and maintained business logic services in .NET Framework and .NET Core for logistics and tracking platforms used by multiple enterprises.
- Introduced asynchronous data ingestion pipelines using RabbitMQ queues and background workers to process telemetry data in near-real-time.
- Developed RESTful APIs consumed by mobile and desktop clients with optimized pagination, filtering, and dynamic querying using Expression Trees.
- Contributed to infrastructure-as-code provisioning using Azure ARM templates for deploying services, databases, and key vaults.
- Reduced customer support tickets by 45% through rigorous backend validation and automated data integrity enforcement via SQL Server constraints.

- Designed message contracts for inter-service communication and implemented robust serialization with JSON.NET and Protobuf where required.
- Maintained modular monolithic codebases and progressively refactored them into bounded contexts following clean architecture guidelines.
- Integrated logging and monitoring using Serilog, Azure Log Analytics, and custom correlation ID tracing across distributed services.
- Wrote unit and integration tests using xUnit and FluentAssertions, achieving over 90% code coverage across critical business modules.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Participated in the backend development of an e-commerce microservices platform using ASP.NET MVC and Azure SQL Database.
- Created admin-facing dashboards for order tracking and inventory management using Razor views and server-rendered content.
- Wrote modular service components to manage order lifecycles, integrated with payment providers via REST APIs and webhooks.
- Deployed services via Azure App Services with staged deployment slots, ensuring zero-downtime rollouts and blue-green testing workflows.
- Enhanced security via HTTPS enforcement, role-based access control, and SQL injection prevention through parameterized queries.
- Collaborated with senior engineers to refactor tightly-coupled codebases using dependency injection and repository patterns.
- Used Azure Blob Storage and CDN to host static assets for faster page load times and better global reach.
- Researched and presented best practices around async programming and performance testing during engineering meetings.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Built internal tooling and automation scripts using C# and .NET for deployment, file syncing, and database backups.
 - Created proof-of-concept features for client applications including REST API consumption and data visualization modules.
 - Helped implement JWT-based authentication across prototype microservices, including token renewal and revocation logic.
 - Collaborated in code reviews and learned OOP, SOLID, and TDD practices through mentorship and pair programming.
 - Managed SQL Server database schema migrations and helped document data models used by operational dashboards.
 - Contributed to minor frontend fixes using HTML/CSS/JS under supervision, aligning with backend changes and API evolution.
 - Performed unit testing with MSTest and prepared technical documentation for junior developer onboarding.
 - Assisted in integrating external APIs (e.g., currency exchange, email notification services) and resolving bugs from staging environments.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ Microsoft Certified: Azure Fundamentals
 - ❖ Udemy: Mastering Microservices with .NET Core and Docker
 - ❖ Pluralsight: Distributed Systems and Scalability Patterns in .NET
 - ❖ Coursera: Data Structures and Algorithms (UC San Diego)
-

PROJECTS

- ✓ **GameSync Platform (Sensidev)**
Built a distributed backend for a real-time gaming analytics platform using .NET Core, Kafka, Azure Functions, and PostgreSQL to process live gameplay data from over 100k users.
- ✓ **PromoTracker System (Syscom Digital)**
Developed a promotional content tracking engine with event sourcing and CQRS using RabbitMQ, SQL Server, and ASP.NET Core APIs, used by retail brands across Europe.
- ✓ **LogiTrack Fleet Manager (Soft Build)**
Developed and maintained core backend modules for a vehicle tracking system. Implemented telemetry streaming and geofencing alerts using Azure Service Bus and .NET.
