

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Customer-centric and technically adept Full Stack Engineer with a strong passion for support, observability, and improving platform reliability. Bringing over 8 years of experience in full stack development, distributed system troubleshooting, and cloud-native operations. Seeking to contribute to CoverGo's mission in transforming the insurance landscape by delivering highly scalable, observable, and resilient digital platforms.

TECHNICAL SKILLS

- **Languages & Frameworks:** .NET, C#, Node.js, Java, TypeScript, JavaScript, Vue.js, React, HTML5, CSS3
- **Observability & Monitoring:** Prometheus, Grafana, New Relic, ELK Stack, OpenTelemetry, Jaeger, Loki, DataDog
- **Cloud & Infrastructure:** AWS, Azure, GCP, Kubernetes, Docker, Dapr, Terraform, Temporal.io
- **Databases:** PostgreSQL, MongoDB, SQL Server, MySQL, Redis, DynamoDB
- **DevOps & CI/CD:** GitHub Actions, Jenkins, GitLab CI/CD, Helm, ArgoCD
- **Tools:** Jira, Zendesk, Confluence, Postman, VSCode, IntelliJ, Git, Bitbucket
- **Testing:** NUnit, xUnit, Mocha, Jest, Cypress, Selenium
- **Other:** Microservices, REST, GraphQL, NoSQL, TDD, BDD, Agile/Scrum, API Gateway, OAuth2, JWT

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led the technical support triage process for complex multi-service systems deployed on Kubernetes across AWS and GCP environments, reducing average incident resolution time by 37%.
- Configured distributed tracing and log aggregation tools (Jaeger, Prometheus, ELK) to enhance root cause analysis efficiency for production incidents in microservices.
- Contributed code fixes in C# (.NET Core) and Node.js for production issues, proactively identifying edge cases and proposing test coverage expansions.
- Implemented infrastructure-as-code using Terraform to deploy and manage multi-cloud observability stacks, ensuring consistent environments across projects.

- Automated recovery scripts and created operational runbooks to streamline common support workflows and decrease Level 1 intervention by 45%.
- Collaborated with customer support teams using Jira and Zendesk, producing knowledge base content and improving feedback loops to engineering.
- Delivered observability dashboards with Grafana for business-critical KPIs, enabling real-time visibility into latency, error rates, and throughput.
- Conducted post-mortem reviews and led blameless incident analysis sessions that drove 18 documented process improvements across projects.
- Participated in the night shift rotation covering global client support, ensuring 24/7 uptime and continuity of services for enterprise applications.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Designed and built microservices in .NET Core and Node.js to support CRM, analytics, and campaign platforms serving telecom and insurance sectors.
- Integrated GraphQL APIs and optimized query efficiency to support real-time campaign tracking and user personalization use cases.
- Diagnosed complex data inconsistencies using SQL Server logs and traces, developing diagnostic tooling that cut issue detection time by over 60%.
- Deployed services on Azure Kubernetes Service (AKS) and set up monitoring with Azure Monitor and Application Insights for application health metrics.
- Developed Vue.js-based dashboards with dynamic charting components powered by Chart.js and Highcharts, enabling clients to visualize campaign KPIs.
- Built reusable CI/CD pipelines using GitHub Actions and GitLab CI to standardize delivery processes across teams.
- Worked closely with QA and DevOps teams to integrate performance profiling and chaos testing tools into staging environments.
- Delivered code fixes and hot patches based on real-time logs and customer escalations with minimal service disruption.
- Assisted in creating support triage guides and technical documentation tailored for Level 1 and 2 support staff.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built and maintained distributed backend services with .NET and ASP.NET for document processing and archival platforms.
- Migrated legacy SOAP APIs to RESTful microservices improving performance, maintainability, and documentation standards.
- Integrated PostgreSQL and MongoDB to support structured and semi-structured data workflows for enterprise clients.
- Led Kubernetes adoption for containerizing legacy applications and configured CI/CD pipelines using Jenkins and Helm.
- Instrumented backend systems with Prometheus metrics and alerts to identify application bottlenecks and memory issues.
- Designed frontend components in React and Vue.js to enable better error messaging and status indicators for user portals.
- Maintained 99.99% uptime by leading weekend and night shift on-call duties and coordinating with SRE teams on incident resolution.

- Participated in customer feedback sessions and used insights to drive improvements in support tools and feature prioritization.
- Mentored junior developers and support engineers, organizing code reviews and debugging workshops focused on distributed systems.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built internal tools for monitoring service availability and created plugins to collect and forward metrics to centralized dashboards.
- Helped improve logging hygiene across backend services by standardizing structured logging formats.
- Built RESTful APIs with Node.js and Express to replace outdated PHP interfaces in operational dashboards.
- Contributed to the creation of test suites for legacy applications using Mocha and Chai, improving regression test coverage.
- Worked on front-end refactor initiatives using Vue.js to increase maintainability and load performance on low-spec devices.
- Collaborated across remote teams to manage deployment timelines and rollback plans.
- Refined system alerts to reduce noise and helped introduce a severity-based escalation policy for incidents.
- Implemented scripts for automated log rotation and cleanup to prevent disk usage alerts in production environments.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Developed internal documentation platforms and knowledge base tools using PHP and JavaScript.
- Participated in debugging and profiling efforts on .NET-based inventory management software.
- Introduced code linting and formatters to improve collaboration among junior devs.
- Built shell scripts to automate backups and alerts for Windows-based servers.
- Implemented SQL Server stored procedures to streamline daily data sync tasks.
- Created incident reporting workflows for client systems using email integrations and webhooks.
- Shadowed senior engineers during support calls to better understand troubleshooting workflows.
- Participated in security audit preparations by cataloging sensitive endpoints and improving authentication flows.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ AWS Certified Developer – Associate
 - ❖ Google Cloud Professional Cloud Developer
 - ❖ Certified Kubernetes Administrator (CKA)
 - ❖ Terraform Associate by HashiCorp
 - ❖ New Relic Performance Pro Certification
-

PROJECTS

- ✓ **Observability Toolkit for Microservices:** Led development of a centralized observability toolkit for .NET and Node.js services including tracing wrappers, metric adapters, and alerting guidelines used across 15+ microservices.
- ✓ **Incident Intelligence Dashboard:** Built a Vue.js-based interface that integrates with Prometheus, Alertmanager, and custom APIs to visualize incident clusters, MTTR trends, and escalation paths.
- ✓ **Insurance Claim Triage Engine:** Collaborated with cross-functional teams to develop a rule-based decision engine for automating claim triage using Node.js, MongoDB, and Azure Functions, reducing manual case handling by 55%.
- ✓ **Cross-Cloud Logging Aggregator:** Designed and deployed a system that normalized log data across AWS and Azure services using Fluent Bit and OpenTelemetry exporters for centralized indexing in Elasticsearch.
