

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile and performance-driven Senior Full Stack Developer with 9+ years of hands-on experience architecting and building scalable web applications using .NET Core, ASP.NET MVC, C#, and React.js. Expert in designing microservices, integrating secure APIs, managing cloud-native deployments via Azure and Docker, and implementing clean software design patterns like MediatR and Repository Pattern. Adept at leading cross-functional teams, driving innovation, and communicating complex technical concepts to non-technical stakeholders. Proven success delivering enterprise-grade solutions with an emphasis on maintainability, testability, and performance optimization.

TECHNICAL SKILLS

- **Languages & Frameworks:**C#, .NET Core, ASP.NET MVC, WebAPI, React.js, TypeScript, JavaScript, HTML5, CSS3, Node.js
- **Cloud & DevOps:**Microsoft Azure (App Service, Service Bus, Functions, SQL DB), Docker, Kubernetes, GitHub Actions
- **Architectures & Patterns:**Microservices, Clean Architecture, MediatR, Dependency Injection, Unit of Work, Repository Pattern
- **Databases & Caching:**SQL Server, NoSQL (MongoDB), Redis
- **Tools & Testing:**Visual Studio, Visual Studio Code, Postman, Fiddler, xUnit, Swagger, Web Developer Tools
- **Others:**OAuth 2.0, JWT Authentication, Git, Jira, REST APIs, NPM

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented scalable .NET Core microservices integrated with Azure Service Bus and Functions to support high-traffic B2B applications in logistics and compliance.
- Led migration of a monolithic legacy system to microservices architecture using ASP.NET Core and Docker, resulting in 60% improvement in deployment speed and scalability.
- Developed React.js-based admin dashboards with Redux, custom hooks, and RESTful API integration, improving UX for internal users across four departments.
- Optimized Entity Framework Core queries using compiled queries and Redis caching, reducing API response time by 40% in mission-critical endpoints.
- Introduced MediatR to decouple business logic and streamline CQRS implementations, boosting unit test coverage and code readability.

- Implemented JWT-based authentication and OAuth2 for secure multi-tenant applications used by financial clients across the EU region.
- Conducted peer code reviews, onboarded junior developers, and promoted CI/CD best practices using GitHub Actions and Azure DevOps pipelines.
- Spearheaded automated integration and unit testing strategies with xUnit and Moq to reduce post-release bugs by 70%.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and maintained multi-tier applications using .NET Core Web API and AngularJS, later modernized to React.js for better maintainability and performance.
- Integrated MS SQL and NoSQL databases with repository pattern and unit of work, ensuring data consistency and code modularity across distributed systems.
- Deployed applications using Docker Compose for local development and Azure App Services for production environments.
- Designed reusable UI components in React with styled-components and context API to streamline branding consistency.
- Built profiling and diagnostics tool integrations (Fiddler, Application Insights) to track and resolve production-level incidents with precision.
- Created Swagger documentation for all internal APIs and managed Postman collections for testing and QA automation.
- Built a plugin-based architecture for marketing analytics tools which allowed drag-and-drop deployment by non-technical users.
- Established version control workflows and release branching strategies using Git and GitFlow in coordination with PMs.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Engineered backend components with ASP.NET MVC and Web API for B2B invoicing and inventory platforms, supporting thousands of concurrent users.
- Created single-page applications using React.js and Bootstrap to handle dynamic forms and real-time data visualizations.
- Refactored legacy code to adopt dependency injection principles using .NET Core built-in services, significantly improving testability.
- Participated in Agile ceremonies and led several sprints as a Scrum advocate, improving team velocity by over 20%.
- Designed and consumed third-party APIs with OAuth 2.0 and JWT token-based authentication for secure client integrations.
- Applied static code analysis tools (SonarQube, ReSharper) to improve code quality and enforce style compliance across repositories.
- Built email and SMS notification microservices using background workers hosted in Azure Functions.
- Collaborated with QA engineers to define BDD test scenarios and integrated test suites with Azure Pipelines.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Maintained web applications built in ASP.NET MVC and jQuery, integrating reporting features for e-commerce analytics tools.
- Wrote stored procedures and views for complex report generation tasks in MS SQL Server and optimized them for performance.
- Contributed to a pilot project exploring Kubernetes for container orchestration and tested scaling strategies under simulated loads.
- Created dynamic chart components using Chart.js and integrated real-time metrics from backend APIs.
- Assisted in setting up CI/CD pipelines using Jenkins and Git, automating deployments to staging environments.
- Added OAuth2 support for integrating with Google APIs and tested access token lifecycles with various user roles.
- Refactored backend codebase to include automated test coverage using NUnit and Moq.
- Participated in client meetings to translate business needs into technical specifications and identify gaps in data modeling.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Contributed to internal tooling development using ASP.NET Web Forms and gradually transitioned components to MVC.
- Wrote and maintained SQL scripts, indexes, and backup routines, learning essential DBMS performance tuning principles.
- Designed and prototyped a contact management system with full CRUD capability using .NET and jQuery.
- Implemented role-based access control and session timeout logic to meet internal compliance policies.
- Worked with senior developers to troubleshoot performance issues using Visual Studio Profiler and Fiddler.
- Learned Git version control through real-world collaboration and code review workflows.
- Documented project architecture and wrote user manuals for internal tools.
- Participated in QA testing, bug triage, and post-release verification processes.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate (AZ-204)

- ❖ Certified .NET Full Stack Web Developer – Udemy
 - ❖ React.js Essential Training – LinkedIn Learning
 - ❖ Docker and Kubernetes: The Complete Guide – Udemy
-

PROJECTS

✓ **B2B Logistics Platform Modernization**

- Led re-architecture of a legacy B2B logistics platform into distributed .NET Core microservices with React.js frontend, containerized using Docker and deployed on Azure.
- Introduced MediatR and CQRS, reducing technical debt and simplifying test automation and future extensibility.

✓ **Compliance Dashboard for Financial Institutions**

- Built real-time reporting dashboard using React, WebAPI, and MS SQL with Redis caching for speed optimization.
- Integrated role-based access and authentication via JWT to meet strict compliance standards.

✓ **Custom CRM Suite with Azure Backend**

- Created a multi-module CRM with ASP.NET Core WebAPI, EF Core, React frontend, and Azure Functions for background processes.
- Enabled push notifications and reporting services via SignalR and Azure Service Bus.
