PROFESSIONAL SUMMARY

Hands-on Senior .NET Engineer with over 9 years of backend development and team leadership experience delivering scalable enterprise systems across finance, marketing, and digital platforms. Proven track record in leading distributed teams, architecting robust APIs, and deploying cloud-native applications on Azure, AWS, and GCP. Deep expertise in C#, .NET Core, RESTful services, SQL/NoSQL databases, Docker/Kubernetes, CI/CD, and Agile delivery. Adept at translating complex business requirements into maintainable, performant backend solutions with clean architecture principles.

TECHNICAL SKILLS

- **Languages & Frameworks:** C#, .NET 6/7/8, ASP.NET Core, Web API, LINQ, Entity Framework Core, TypeScript
- **Frontend (Exposure):** React, Angular, Blazor (Integration-level)
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & DevOps:** Azure (Functions, App Service, Storage), AWS (Lambda, ECS), GCP (Cloud Run, Firestore), Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI
- **Architecture & Patterns:** Microservices, Clean Architecture, Event-driven design, CQRS, Domain-Driven Design
- **Testing:** xUnit, NUnit, Moq, Playwright, Cypress
- **Other:** REST, gRPC, OAuth2, OpenAPI/Swagger, E2E Automation, Agile/Scrum, Jira

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led a team of 6 engineers in building .NET 7 microservices using ASP.NET Core and Azure Functions, improving scalability of financial APIs by 40%.
- Designed and implemented secure RESTful APIs and background services for B2B clients, integrating CI/CD via GitHub Actions and Terraform for cloud provisioning.
- Collaborated directly with enterprise architects and product stakeholders to deliver event-driven messaging architecture using Azure Service Bus and NServiceBus.
- Mentored junior and mid-level developers through code reviews, pair programming, and architectural guidance, increasing team delivery quality and consistency.

- Migrated legacy monoliths to cloud-native microservices hosted in Docker containers on Azure Kubernetes Service, resulting in 50% reduction in deployment friction.
- Integrated authentication and role-based access using OAuth2 with Azure AD B2C for secure user identity management across services.
- Created scalable reporting modules backed by PostgreSQL and optimized complex queries for performance-critical endpoints handling thousands of requests per second.
- Applied Clean Architecture and SOLID principles to ensure modular, testable, and easily maintainable codebase adopted company-wide.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed robust backend systems using .NET Core and SQL Server to support marketing campaign automation across multiple enterprise clients.
- Designed and maintained CI/CD pipelines in Azure DevOps and GitLab CI, reducing deployment lead time from days to under 2 hours.
- Implemented Redis-based caching strategies and async processing for time-sensitive workflows, improving request throughput by 3x during peak loads.
- Built secure internal APIs using ASP.NET Core Web API for integrations with CRM platforms and Google/Facebook Ads APIs.
- Collaborated closely with frontend developers on API contracts and integrated features with Angular and React clients.
- Used Docker Compose and custom scripts to simulate real-time production-like environments in local development.
- Enhanced system observability using Application Insights and Prometheus/Grafana for backend service monitoring.
- Championed code quality and process improvement through regular retrospectives and the introduction of TDD across backend modules.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built and maintained ASP.NET MVC and Web API systems for real estate and booking platforms with integrations to third-party vendors.
- Designed SQL Server schemas and stored procedures to support dynamic filtering, reporting, and multi-language content delivery.
- Collaborated with business analysts and UI designers to develop clean, responsive interfaces with integrated backend logic.
- Conducted regular performance profiling using JetBrains dotTrace and optimized LINQ-heavy services.
- Introduced background job handling using Hangfire to decouple long-running tasks from main request threads.
- Managed Azure deployments and maintained staging environments for QA validation.
- Supported multi-region data handling and GDPR compliance for customer data workflows.
- Built REST APIs consumed by Android/iOS apps with JWT-based authentication and custom rate-limiting mechanisms.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Worked on internal ERP modules using .NET Framework and Windows Services to automate supply chain operations.
- Created and consumed SOAP and REST APIs to sync inventory and financial data between business units and external vendors.
- Led the refactoring of legacy modules into loosely coupled service-oriented components.
- Optimized SQL queries and indexes in high-load environments involving millions of rows per table.
- Delivered enhancements that reduced error rates in invoicing pipelines by 70%.
- Participated in Agile sprints and daily standups with stakeholders across different time zones.
- Created detailed system documentation and support handoff guides for future maintainers.
- Contributed to setting up a Jenkins CI pipeline for nightly builds and automated regression tests.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Supported the development of inventory and POS applications using ASP.NET Web Forms and SQL Server.
- Wrote unit and integration tests to validate pricing and discount engine logic.
- Developed internal tooling scripts to automate product data entry and Excel imports, saving hours of manual work weekly.
- Enhanced UI responsiveness using AJAX, Bootstrap, and JavaScript.
- Participated in team code reviews and version control management using Git and Bitbucket.
- Built a prototype dashboard for real-time sales monitoring, integrating Highcharts and SignalR.
- Created API documentation using Swagger and Postman collections for QA handoff.
- Gained foundational experience with Agile ceremonies, story estimation, and backlog grooming.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ AWS Certified Developer – Associate
 - ❖ Google Cloud Digital Leader
 - ❖ SQL Server 2019 Performance Tuning and Optimization
 - ❖ Docker and Kubernetes: The Complete Guide
-

PROJECTS

Cloud-Based Financial Analytics Platform

- Built scalable backend APIs with .NET Core and Azure Functions; integrated Azure Event Grid for eventing and Cosmos DB for NoSQL document storage.
- Led the infrastructure setup with Terraform and GitHub Actions for infrastructure-as-code provisioning and CI/CD.

Enterprise Lead Management System

- Designed microservice architecture for high-load campaign orchestration engine using .NET 6, RabbitMQ, and PostgreSQL.
- Developed RESTful API consumed by Angular frontend; secured using OAuth2 and Azure Key Vault.

DevOps Accelerator Toolkit

- Created a CLI-based internal tool in C# to manage Docker environments, simplify Kubernetes deployments, and run local tests against test databases.
- Supported integration with AWS ECS and GCP Cloud Run for multi-cloud deployments.
