

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned software engineer with 9+ years of experience specializing in AI/ML system design, cloud-native backend architecture, and MLOps automation. Proven track record of delivering production-grade AI solutions across cloud platforms (GCP, AWS) using Python, Kubernetes, and Terraform. Adept at leading engineering teams, bootstrapping scalable infrastructure from scratch, and operating in high-ambiguity environments aligned with business goals. Passionate about building AI-first products and shaping technical cultures at early-stage startups.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, C#, Bash
- **AI/ML:** TensorFlow, PyTorch, Scikit-learn, LangChain, Transformers, HuggingFace
- **MLOps & Infrastructure:** Kubernetes, Docker, Terraform, MLflow, Kubeflow, Airflow
- **Cloud Platforms:** AWS (SageMaker, Lambda, S3, ECS), GCP (Vertex AI, Cloud Run, BigQuery)
- **DevOps Tools:** GitHub Actions, Jenkins, Prometheus, Grafana, ELK stack
- **Data:** PostgreSQL, MongoDB, Redis, Kafka, Parquet, Pandas, Spark
- **Frameworks:** FastAPI, Flask, Django, React, .NET Core

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented a fully containerized machine learning infrastructure using Kubernetes and MLflow, enabling scalable model training, versioning, and A/B testing workflows.
- Built end-to-end pipelines for ingestion, preprocessing, and real-time inference across AWS and GCP using Python, Airflow, and Terraform, reducing model deployment cycle time by 65%.
- Integrated Vertex AI with custom model monitoring tools, introducing a unified dashboard for latency, drift, and failure rate analysis using Prometheus and Grafana.
- Led a cross-functional team of 6 engineers and data scientists to develop a fraud detection AI system that processed over 20M events monthly with 92% precision.
- Deployed AI models as microservices using FastAPI on Kubernetes, with auto-scaling policies and CI/CD pipelines via GitHub Actions and Helm charts.
- Advised leadership on cloud architecture and contributed to \$400K+ in infrastructure cost savings through optimization and vendor migration strategies.
- Conducted hiring, mentoring, and onboarding processes for junior engineers and data scientists, fostering a high-performance engineering culture.

- Championed secure ML development practices including RBAC, model encryption, and audit logging compliant with ISO and GDPR standards.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed machine learning models for marketing campaign optimization, leading to a 23% increase in engagement rates across digital platforms.
- Built automated data pipelines to ingest, normalize, and analyze real-time campaign data streams from various platforms (Facebook Ads, Google Analytics).
- Designed scalable REST APIs in Flask to expose model insights to internal dashboards and client applications.
- Led the transition to containerized infrastructure using Docker and Kubernetes, reducing manual deployment errors by over 80%.
- Implemented CI/CD pipelines and monitoring tools, enabling rapid iteration and reducing downtime to near zero.
- Worked closely with clients to gather requirements, present AI-driven solutions, and tailor ML models to specific business domains.
- Supported secure API gateway setup using OAuth2 and JWT, strengthening application authentication and authorization mechanisms.
- Collaborated with cross-functional teams across product, analytics, and QA to ensure successful delivery of AI-based features.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Created data-driven backend systems supporting predictive analytics modules for construction and real-estate platforms.
- Implemented data warehousing pipelines to consolidate internal and third-party data sources, increasing data availability by 4x.
- Designed scalable services with RESTful endpoints and message queues using RabbitMQ and Redis.
- Wrote integration and unit tests to improve code reliability and deployed systems to AWS using CloudFormation scripts.
- Optimized backend performance with caching layers and query tuning, improving response time for analytics dashboards by 68%.
- Mentored junior developers and provided code reviews and documentation practices to elevate engineering standards.
- Developed internal monitoring dashboards using Grafana and integrated with custom log aggregation systems.
- Participated in Agile sprints and stakeholder demo meetings, presenting technical solutions aligned with roadmap priorities.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Assisted in backend development of e-commerce features including recommendation systems powered by collaborative filtering models.

- Migrated monolithic backend to microservices architecture with improved maintainability and deployment speed.
- Designed and deployed lightweight ML modules for dynamic pricing and A/B testing experiments.
- Built data synchronization pipelines using cron-based jobs and REST APIs to ensure consistency across services.
- Conducted performance benchmarking and provided actionable optimization reports to technical leads.
- Collaborated with UI/UX designers and frontend engineers to streamline the integration of ML-generated insights.
- Implemented basic user behavior analytics dashboards using Plotly and D3.js.
- Participated in daily standups, pair programming, and code walkthroughs to accelerate team learning.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Developed proof-of-concept ML models for internal product demos using Python and Scikit-learn.
- Contributed to backend development for data visualization tools used in marketing intelligence.
- Assisted in writing unit tests and developing logging mechanisms for API services.
- Gained hands-on experience in building full-stack features and collaborating in Agile environments.
- Explored AWS SDK for automation tasks and storage integration.
- Delivered documentation and user guides for internal tools, aiding adoption and feedback.
- Participated in weekly tech discussions and brainstorming sessions on new product ideas.
- Contributed bug fixes and performance improvements across legacy codebases.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Google Cloud Professional Machine Learning Engineer
- ❖ AWS Certified Machine Learning – Specialty
- ❖ Certified Kubernetes Application Developer (CKAD)
- ❖ TensorFlow Developer Certificate
- ❖ MLflow Mastery by Databricks

PROJECTS

- ✓ **AutoML Deployment Framework:** Built an internal framework for training, tuning, deploying, and monitoring AutoML models across GCP and AWS. Reduced deployment time from weeks to hours.
- ✓ **AI Fraud Detection Engine:** Designed and productionized a deep learning-based fraud detection pipeline handling 20M+ monthly events with real-time detection under 200ms.

- ✓ **Cross-Cloud MLOps Toolkit:** Developed reusable Terraform and Helm modules for MLOps workflows across AWS SageMaker and GCP Vertex AI.
- ✓ **Secure Model Serving:** Implemented a Kubernetes-native serving architecture with end-to-end encryption, OAuth2-secured endpoints, and per-model authorization scopes.
