

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile and solution-oriented AI and software engineer with 10+ years of experience in delivering scalable, high-impact software across diverse sectors including digital marketing, telecommunications, and product innovation. Proven track record in leading cross-functional teams, architecting AI/ML solutions, and deploying LLM-based systems to solve real-world business problems. Skilled in stakeholder engagement, full-cycle project ownership, and fostering collaborative environments to drive value. Passionate about translating AI advancements into responsible, practical applications that maximize ROI.

TECHNICAL SKILLS

- **AI/ML:** PyTorch, TensorFlow, Hugging Face Transformers, Scikit-learn, LangChain, OpenAI API, LLM fine-tuning, NLP, classification, regression, embeddings, vector databases
- **Programming:** Python, TypeScript, JavaScript, C#, C++, Bash, SQL, NoSQL, Java (basic)
- **Cloud & DevOps:** Docker, Kubernetes, GitHub Actions, GitLab CI, Azure, GCP, AWS (EC2, S3), REST APIs
- **Frontend & Visualization:** React, Next.js, Redux, HTML5, CSS3, D3.js, TailwindCSS, Chart.js
- **Backend & Data:** Node.js, Express.js, PostgreSQL, MongoDB, Redis, Elasticsearch, RabbitMQ, Kafka
- **Tools & Frameworks:** FastAPI, Flask, .NET Core, Jira, Confluence, Notion, VSCode, Postman
- **Soft Skills:** Technical Leadership, Agile/Scrum, Mentorship, Client Communication, Documentation

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Spearheaded the architecture and delivery of an LLM-based customer support agent, enabling automated ticket resolution and intelligent routing across multiple domains including healthcare and telecom.
- Led AI/ML feature squads across forecasting, recommendation systems, and NLP pipelines, delivering measurable business outcomes through experimentation and iterative design.
- Mentored 5+ mid-level engineers, conducting weekly knowledge shares and technical workshops focused on responsible AI and MLOps best practices.

- Designed and implemented retrieval-augmented generation (RAG) pipelines integrating OpenAI, LangChain, and Weaviate for real-time knowledge synthesis.
- Partnered with business analysts and domain experts to define use cases and transform ambiguous goals into concrete AI delivery plans.
- Owned architecture decisions for real-time analytics systems deployed on Azure, leveraging Kubernetes for scaling NLP services.
- Maintained 98% uptime for AI-enabled systems through robust monitoring, alerting, and incident response frameworks.
- Guided code reviews, pair programming sessions, and architectural retrospectives to upskill the team and ensure clean, testable code.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Delivered full-stack SaaS platforms powered by Python (Flask, FastAPI) and React, enabling media clients to automate content tagging using pre-trained NLP models.
- Contributed to internal forecasting tools that optimized advertising inventory pricing using time series regression and Bayesian optimization.
- Integrated Elasticsearch and MongoDB for semantic product search systems, improving relevance scoring using custom TF-IDF and vector embeddings.
- Developed and deployed containerized AI microservices using Docker and GitHub Actions, ensuring high maintainability and reproducibility.
- Collaborated closely with designers and PMs to scope technical feasibility of AI features and prototype experimental functionality.
- Participated in bi-weekly architectural syncs focused on modularization, scaling patterns, and evolving best practices.
- Championed accessibility-first frontends and performance budgets, aligning user experience goals with efficient backend services.
- Delivered projects across domains including education, retail, and marketing tech.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built AI data pipelines for customer churn prediction and sentiment analysis in the hospitality industry using NLP classification and clustering techniques.
- Delivered an internal tool to summarize customer feedback from multi-lingual reviews using transformer-based summarization (BERT/GPT-2).
- Implemented recommendation engines for B2B product discovery platforms using collaborative filtering and matrix factorization models.
- Managed CI/CD workflows in Azure DevOps, ensuring reliable deployments of data products to production.
- Delivered presentations on ethical AI and explainability tools (LIME, SHAP) to leadership teams.
- Optimized database queries in PostgreSQL, reducing average data fetch latency by 35%.
- Introduced automated unit and integration testing frameworks, increasing coverage to 90% across services.
- Enabled GDPR-compliant data handling pipelines through metadata versioning and masking systems.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed Kafka-enabled microservices for real-time communication between CRM and external email automation systems.
- Applied Protobuf-based serialization techniques to optimize stream payload transmission and ensure type safety.
- Collaborated with UI team to integrate streaming status updates into web-based dashboards, improving client transparency and SLAs.
- Designed test harnesses to validate Kafka consumer groups under variable throughput conditions and assess lag behavior.
- Developed Python scripts for monitoring topic health and tracking consumer performance metrics over time.
- Assisted in migrating legacy services to event-driven architecture to enable reactive workflows for marketing triggers.
- Participated in agile cycles, delivering MVP increments and contributing to sprint demos for stakeholders.
- Worked closely with DevOps to containerize services and implement log aggregation for end-to-end observability.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Built internal dashboards using JavaScript and Python to visualize Kafka metrics, including consumer lag, partition balance, and throughput.
- Created small-scale LLM evaluation tools to assess summarization quality of internal document processing scripts.
- Participated in experimental AI pipelines integrating sensor data into decision-making frameworks for facility management.
- Explored unsupervised clustering algorithms to categorize large sets of sensor readings from IoT devices.
- Documented workflows and wrote onboarding guides for future interns, reducing ramp-up time by 40%.
- Attended and contributed to architectural discussions around scalability and failover strategies.
- Implemented monitoring tools for backend services using Prometheus and Grafana, enabling threshold-based alerts.
- Conducted proof-of-concept studies for using MQTT and Kafka in hybrid sensor streaming setups.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

❖ **ConversioAI**

An AI-powered feedback assistant integrating GPT-4 via LangChain to summarize customer complaints and recommend support resolutions. Deployed as a Slack bot for real-time B2B use.

❖ **OptiFlow Forecasting**

Built a modular forecasting engine using Prophet and XGBoost for marketing spend and inventory prediction across 3 different verticals. Enabled via a web interface with historical backtesting.

❖ **Semantic Search POC**

Developed a prototype search engine leveraging OpenAI embeddings, Pinecone vector store, and FastAPI for contextual document retrieval in legal and education use cases.

PROJECTS

- ✓ TensorFlow Developer Certificate – Google AI (2023)
- ✓ MLOps Specialization – Coursera/DeepLearning.AI (2023)
- ✓ Building Systems with the ChatGPT API – OpenAI (2024)
- ✓ Azure AI Fundamentals (AI-900) – Microsoft (2022)
