

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Python AI Engineer with 9+ years of experience designing scalable AI platforms, production-grade ML pipelines, and distributed systems. Specialized in **Generative AI, LLMs, unstructured data processing, and algorithm design** with strong emphasis on Test-Driven Development (TDD), observability, and cloud-native deployments. Adept at collaborating with data scientists, product owners, and engineers to bring prototypes into reliable production systems.

TECHNICAL SKILLS

- **Languages:** Python, Go, TypeScript, JavaScript
- **AI/ML:** Generative AI, LLMs (OpenAI, Hugging Face), NLP pipelines, TensorFlow, PyTorch, Vertex AI, AWS SageMaker
- **Data:** Unstructured data processing (text, images, logs), ETL pipelines, Pandas, Spark, SQL/NoSQL
- **Cloud & DevOps:** AWS, Azure, GCP, Docker, Kubernetes, Terraform, CI/CD workflows
- **Testing & TDD:** PyTest, unittest, coverage, CI/CD testing integration
- **Observability:** Prometheus, OpenTelemetry, Datadog, Grafana, ELK Stack

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and delivered Python-based AI pipelines for unstructured text and image data, leveraging Hugging Face Transformers and OpenAI APIs.
- Implemented scalable cloud-native solutions with AWS SageMaker and GCP Vertex AI, enabling high-throughput LLM inference in production systems.
- Developed robust algorithms for entity recognition, sentiment analysis, and generative summarization, optimizing accuracy and execution time.
- Applied Test-Driven Development (TDD) with PyTest and CI/CD pipelines, improving code reliability and reducing production incidents by 40%.
- Built observability systems with Prometheus and OpenTelemetry, adding model performance monitoring, request tracing, and real-time alerting.
- Collaborated with data scientists to transform research prototypes into production-ready pipelines, aligning business outcomes with AI features.
- Optimized data ingestion workflows with Spark and Python multiprocessing, reducing processing latency of unstructured logs by 60%.
- Acted as a lead engineer in designing platform architecture for AI deployment, ensuring fault tolerance, compliance, and model governance.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Built Python-based NLP pipelines for unstructured customer feedback, integrating sentiment and intent classification models into production APIs.
- Designed algorithms to extract structured insights from unstructured images and logs, improving analytics dashboards for business stakeholders.
- Integrated LLMs and text generation APIs into digital platforms, providing AI-driven chat and content recommendation systems.
- Implemented TDD across AI microservices, achieving 85%+ test coverage and ensuring resilient deployments across staging and production.
- Enhanced observability using Datadog and ELK, creating dashboards that tracked AI model drift, inference errors, and real-time usage metrics.
- Automated ML pipeline deployments via CI/CD workflows using Docker, Kubernetes, and GitLab CI, improving deployment reliability.
- Optimized inference performance with batching, caching, and GPU acceleration, reducing cost per request and improving scalability.
- Partnered with product teams to deliver explainable AI solutions, ensuring stakeholder confidence in Generative AI and NLP-driven features.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Developed scalable Python services for AI-driven analytics systems, processing millions of unstructured text logs daily with high accuracy.
- Built recommendation engines using NLP and deep learning, integrating them into customer-facing portals for real-time personalization.
- Applied algorithm optimization techniques to improve NLP pipeline throughput, reducing average inference latency by over 45%.
- Collaborated with cloud engineers to deploy AI workloads on AWS and Azure, leveraging GPU instances for high-performance inference.
- Wrote unit and integration tests for AI microservices under TDD practices, significantly reducing post-release bug rates.
- Implemented monitoring systems with Grafana and Prometheus, enabling proactive AI model health checks and system-wide visibility.
- Integrated unstructured image classification services into enterprise platforms, expanding AI-driven automation capabilities.
- Contributed to data pipeline architecture with Kafka and Spark, ensuring reliable ingestion and transformation of unstructured datasets.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Built AI-powered search and recommendation features using NLP algorithms, processing unstructured customer interaction data at scale.
- Designed and deployed Python-based classification algorithms for text categorization, improving business intelligence insights.

- Implemented logging and monitoring frameworks for AI microservices, ensuring production-grade reliability and system traceability.
- Created generative content pipelines for marketing automation, applying LLM-based text generation integrated with business APIs.
- Applied TDD and CI/CD to ensure robust, maintainable code for AI components in a high-paced Agile development environment.
- Collaborated with data scientists to fine-tune ML models, bringing prototypes into production-ready services.
- Optimized SQL/NoSQL schemas for unstructured data, supporting analytics and inference pipelines with minimal latency.
- Delivered new AI features within tight deadlines, balancing technical feasibility with product priorities.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in developing AI prototypes for text classification and image recognition tasks, gaining experience in unstructured data processing.
- Wrote Python scripts for feature engineering, preprocessing, and data pipeline automation, supporting senior AI engineers.
- Learned best practices in TDD and applied them to small AI modules, ensuring code maintainability and reliability.
- Contributed to cloud deployment experiments with AWS and Azure ML services, gaining exposure to cloud-native AI workflows.
- Integrated logging and monitoring for early-stage AI applications, improving visibility and debugging during experiments.
- Conducted literature reviews and benchmarks for NLP algorithms, helping select optimal approaches for production systems.
- Supported team efforts in building APIs to expose ML models, learning how to design scalable, production-ready AI services.
- Delivered independent modules under guidance, building confidence in applying AI and Python to real-world systems.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- Google Cloud Professional Machine Learning Engineer
 - AWS Certified Machine Learning – Specialty
 - Microsoft Certified: Azure AI Engineer Associate
-

PROJECTS

- **Generative AI Summarizer** – Designed Python pipeline using OpenAI GPT and Hugging Face to summarize unstructured reports into executive insights.
- **Vertex AI NLP Pipeline** – Built scalable pipeline for text classification on GCP Vertex AI, leveraging TDD practices for reliability.
- **AI Observability Framework** – Developed Prometheus + OpenTelemetry dashboards to monitor model drift, inference latency, and error rates in real time.
- **Unstructured Data Ingestion Engine** – Created Spark + Python-based ingestion pipeline for logs and documents, optimizing cost and reliability in AWS.
