PROFESSIONAL SUMMARY

Versatile and results-driven Senior Software Developer with over 9 years of experience designing, developing, and deploying high-performance enterprise applications. Proven expertise in .NET and C# development with a strong emphasis on scalable API design using GraphQL and REST. Adept in Azure cloud architecture, CI/CD pipelines, telemetry and monitoring, and secure integration with data platforms such as Databricks Unity Catalog. Recognized for driving operational excellence, cross-functional collaboration, and architectural innovation in diverse, fast-paced environments including energy, cybersecurity, and AI domains.

TECHNICAL SKILLS

- **Languages:** C#, JavaScript, TypeScript, SQL, Python
- **Frameworks:** .NET 6/7, ASP.NET Core, Entity Framework, GraphQL, REST
- **Cloud Platforms:** Microsoft Azure (App Services, Functions, Key Vault, Cosmos DB, Monitor)
- **Data Platforms:** Databricks Unity Catalog, Azure Synapse, SQL Server, PostgreSQL
- **DevOps & CI/CD:** Azure DevOps, GitHub Actions, Docker, Kubernetes, Terraform
- **Monitoring:** Azure Monitor, Application Insights, Prometheus, Grafana
- **Tools & Technologies:** Visual Studio, Postman, Swagger/OpenAPI, Git, Redis, RabbitMQ
- **Testing & Quality:** xUnit, NUnit, Selenium, Postman, JMeter, SonarQube
- **Other:** Agile/Scrum, JIRA, Confluence

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led the architecture and implementation of enterprise-grade .NET APIs supporting both GraphQL and REST, delivering flexible data access for high-throughput analytics applications.
- Designed scalable, cloud-native solutions integrating Azure Functions, Databricks, and Unity Catalog, significantly improving real-time data processing and governance.
- Developed robust CI/CD pipelines using Azure DevOps, enabling automated testing, staging, and production deployments with zero-downtime releases.
- Integrated telemetry and observability using Application Insights and Azure Monitor, reducing MTTR by 45% through proactive performance monitoring.

- Collaborated with cross-functional teams to establish secure authentication and authorization strategies using Azure AD and OAuth2 protocols.
- Refactored legacy .NET services into modular microservices deployed on Azure Kubernetes Service (AKS), reducing deployment complexity and improving fault tolerance.
- Optimized API performance using caching (Redis), asynchronous programming, and query tuning, resulting in a 60% reduction in average response time.
- Mentored junior developers and conducted architectural reviews, establishing best practices across backend, deployment, and monitoring workflows.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Engineered secure and scalable REST APIs in ASP.NET Core for marketing automation platforms, handling over 20 million daily transactions across clients.
- Designed and implemented modular authentication systems integrated with Azure Active Directory and custom identity providers.
- Collaborated on GraphQL API implementations to unify internal data access layers, improving developer productivity and client integration time.
- Contributed to Azure-hosted microservices and orchestrated deployments using Docker and Kubernetes, improving operational scalability and agility.
- Conducted load testing and tuning using JMeter and Azure Load Testing, identifying key optimizations that increased system throughput by 30%.
- Introduced automated API contract testing using Postman and Swagger to maintain strict compliance with business rules and SLAs.
- Developed internal dashboards using Azure Monitor and Grafana for real-time tracking of system health, latency, and uptime metrics.
- Supported ISO compliance by building audit-ready logs and ensuring secure data flows aligned with GDPR and corporate security standards.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed robust backend services using .NET Core and Entity Framework for enterprise ERP and CRM modules across energy and logistics sectors.
- Designed RESTful APIs to expose reporting and analytics interfaces, supporting integrations with Power BI and Tableau dashboards.
- Improved application performance with database indexing, async query optimization, and memory-efficient data pipelines.
- Participated in code reviews and continuous refactoring cycles, raising maintainability and decreasing code complexity across modules.
- Developed CI/CD pipelines on Azure DevOps, integrating unit, integration, and acceptance tests for production-ready builds.
- Assisted in the migration of on-prem workloads to Azure App Services, ensuring fault-tolerant architecture with Azure Backup and Azure SQL.
- Created Azure Function triggers to support real-time notifications and automated data synchronization tasks.
- Conducted security audits and threat modeling sessions in collaboration with the DevSecOps team to identify and mitigate vulnerabilities.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed robust backend services using .NET Core and Entity Framework for enterprise ERP and CRM modules across energy and logistics sectors.
- Designed RESTful APIs to expose reporting and analytics interfaces, supporting integrations with Power BI and Tableau dashboards.
- Improved application performance with database indexing, async query optimization, and memory-efficient data pipelines.
- Participated in code reviews and continuous refactoring cycles, raising maintainability and decreasing code complexity across modules.
- Developed CI/CD pipelines on Azure DevOps, integrating unit, integration, and acceptance tests for production-ready builds.
- Assisted in the migration of on-prem workloads to Azure App Services, ensuring fault-tolerant architecture with Azure Backup and Azure SQL.
- Created Azure Function triggers to support real-time notifications and automated data synchronization tasks.
- Conducted security audits and threat modeling sessions in collaboration with the DevSecOps team to identify and mitigate vulnerabilities.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in the development of RESTful services in C# for IoT data ingestion and transformation, focusing on fault tolerance and extensibility.
- Built basic monitoring dashboards to display real-time sensor data using open-source charting libraries and WebSocket streams.
- Contributed to API documentation and internal wiki pages, improving knowledge sharing within the team.
- Learned and applied software testing fundamentals, including unit testing and mocking strategies for backend modules.
- Supported bug triaging and wrote regression test cases to prevent recurring production issues.
- Shadowed senior developers in debugging sessions and contributed to patching memory leaks and race conditions.
- Participated in code reviews and incorporated best practices in object-oriented programming and SOLID principles.
- Explored Azure PaaS services and presented findings on scalable architecture alternatives for IoT applications.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ Microsoft Certified: DevOps Engineer Expert
 - ❖ GraphQL Developer Certification (Apollo Federation)
 - ❖ Databricks Lakehouse Fundamentals
 - ❖ Building Secure Azure Solutions (Pluralsight)
-

PROJECTS

- ✓ **EnergyGrid API Gateway**
Led backend development for a scalable API Gateway written in .NET 7, enabling secure access to datasets in Databricks Unity Catalog. Integrated both GraphQL and REST endpoints, handled authentication via Azure AD, and implemented rate limiting, caching, and detailed telemetry.
- ✓ **Unified Monitoring Platform**
Developed and deployed a real-time monitoring and telemetry platform aggregating Azure Monitor, Application Insights, and Prometheus into a Grafana dashboard for full-stack visibility. Reduced downtime by 35% and improved root-cause analysis efficiency.
- ✓ **CI/CD Pipeline Automation for Distributed APIs**
Architected a reusable Azure DevOps pipeline that standardized testing, security scans, version tagging, and environment deployment for over 15 microservices, improving release velocity and consistency.
