

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Senior Android Developer with over 9 years of experience delivering scalable, high-performance native applications in Kotlin. Specialized in Test-Driven Development, CI/CD pipelines, and collaborative agile methodologies including XP and pair programming. Passionate about building intuitive UI and robust systems for high-stakes industries such as fintech, crypto, and commodities trading. Open to B2B opportunities across the European Union.

TECHNICAL SKILLS

- **Languages:** Kotlin, Java, Dart, TypeScript, JavaScript, XML
- **Mobile:** Android SDK, Jetpack Compose, ViewModels, LiveData, Room, DataStore
- **Testing:** JUnit, Espresso, Mockito, TDD, red-green-refactor flow
- **DevOps:** Jenkins, GitHub Actions, Bitrise, Fastlane, Docker, CI/CD
- **Architecture:** MVVM, Clean Architecture, Dagger/Hilt, Retrofit, Coroutines, Flow
- **Cloud:** AWS, GCP, Firebase, App Distribution
- **Databases:** PostgreSQL, MongoDB, SQLite, Realm, Room (SQL & NoSQL)
- **Collaboration:** XP Practices, Pair Programming, Agile, Jira, Git
- **Tools:** Android Studio, Gradle, Postman, Charles Proxy, Figma, GitLab CI

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Delivered native Kotlin apps from scratch focused on secure financial data processing and real-time transactions, supporting trading logic for assets including crypto and commodities
- Led the design and integration of highly customizable UI components following Material Design 3 and Jetpack Compose for performance-critical mobile workflows
- Championed TDD across the Android team, enforcing red-green-refactor practices with JUnit and Espresso on all new features
- Built automated CI/CD pipelines using GitHub Actions and Fastlane to enable rapid deployment cycles and reduce release overhead by over 70%
- Actively participated in daily pair programming (minimum 5 hours/day) with senior engineers to maintain XP quality standards and improve team velocity

- Reduced critical crash rates by implementing defensive programming, improved observability with Firebase Crashlytics and integrated custom performance logs
- Oversaw full release lifecycle management including beta testing, feature toggles, A/B testing and Play Store optimization
- Worked closely with cloud infrastructure teams to securely integrate with GCP-hosted microservices and real-time sockets for live price feeds
- Delivered a greenfield stock and forex trading platform for enterprise clients, supporting multi-currency environments, and secure onboarding flows
- Refactored legacy codebases to modern Kotlin idioms, enabling full test coverage and improving developer experience
- Built internal development tools to support QA automation and staging environment provisioning on AWS and Firebase
- Maintained high performance by tuning Room DB queries, lazy loading, and custom paging strategies for market data APIs
- Provided mentorship for junior Android developers and participated in code reviews focused on architecture, testability, and consistency

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed and maintained business-oriented Android applications supporting ad-tech and marketing automation features
- Built modular UI components in Kotlin with ViewBinding and lifecycle-aware architecture for brand-customizable campaigns
- Implemented test-driven development using JUnit and Mockito to enable safe refactoring and reduce regression issues
- Collaborated via pair programming on core modules and helped establish CI/CD with Jenkins for nightly builds and QA automation
- Integrated mobile apps with REST APIs using Retrofit with custom interceptors and dynamic caching for low-latency UX
- Monitored production performance and crash metrics with Firebase and adjusted release cadence accordingly
- Participated in architecture meetings to introduce MVVM pattern and enforce separation of concerns
- Worked with analytics SDKs to measure funnel conversions, enabling data-driven iteration on product features

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed Android apps from concept to release for multiple enterprise clients with strong UI/UX and domain logic
- Refactored Java codebases into Kotlin to support modern Android practices and improve maintainability
- Maintained a robust CI/CD system using Bitrise with pre-merge checks, UI testing, and artifact delivery
- Practiced test-first development and collaborated with testers for continuous test plan refinement
- Engaged in extensive pair programming with distributed teams to align architecture and feature rollout plans

Software Developer

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Assisted in Android app prototyping and functional proof-of-concepts for startup MVPs in various domains
- Built reusable Kotlin components and documented onboarding steps for internal engineering handoffs
- Integrated Google Maps SDK and location services for logistics and real-time route tracking features

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Participated in Android and backend REST service development under close mentorship
- Developed UI flows for e-commerce app prototypes and integrated payments through third-party SDKs

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- **Associate Android Developer** – Google (2020)
- **Kotlin for Android Developers** – JetBrains Academy (2021)
- **Android Jetpack Masterclass** – Udemy (2022)
- **AWS Certified Cloud Practitioner** – Amazon Web Services (2023)
- **Google Cloud Fundamentals: Core Infrastructure** – Coursera (2024)

PROJECTS

TradingX Android Platform

Built a white-label Android app for institutional stock, forex, and crypto trading with secure OAuth onboarding, multi-language support, real-time tickers, and visual charting powered by WebSockets. Delivered under extreme pair programming and XP constraints. Integrated TDD and CI/CD from day one.

Tech Stack: Kotlin, Jetpack Compose, Firebase, Retrofit, GCP, GitHub Actions, WebSockets

MobileWallet Pro

Engineered a multi-currency wallet app supporting crypto and fiat assets. Enabled secure backups, biometric logins, and price alerts. Used Room for offline support and DataStore for encrypted preferences.

Tech Stack: Kotlin, Hilt, Room, Jetpack Navigation, Firebase Auth, AWS Cognito
