

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Android Engineer with over 8 years in building modern, performant, and scalable Android applications using Kotlin and Jetpack Compose. Proven track record of integrating mobile apps with backend APIs, control systems, and IoT hardware. Seeking a Senior Android Developer position to deliver cutting-edge experiences and optimize performance across devices and platforms.

TECHNICAL SKILLS

- **Languages:** Kotlin, Java, TypeScript, JavaScript
- **Frameworks & Tools:** Android SDK, Jetpack Compose, RxJava, Coroutines, Hilt, Room, Retrofit, Firebase, Dagger, Git, Gradle, Android Studio
- **Architecture Patterns:** MVVM, MVI, Clean Architecture
- **Cloud & DevOps:** AWS (Lambda, S3, EC2), GCP (Firestore, Cloud Functions), Azure DevOps, GitHub Actions, Docker, CI/CD pipelines
- **Databases:** SQLite, Room, PostgreSQL, MySQL, MongoDB, Firebase Realtime DB
- **Testing:** Espresso, JUnit, Mockito, Robolectric, UI Automator
- **Other:** REST APIs, BLE, WebSocket, IoT protocols, Google Play Services, Push Notifications, Location Services

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Developed and maintained Android apps using Kotlin, Jetpack Compose, and Android Jetpack libraries with a focus on high performance and battery efficiency.
- Integrated complex RESTful APIs using Retrofit and ensured secure access via OAuth2 and Firebase Authentication for real-time system control apps.
- Designed reusable components with MVVM and MVI patterns, optimizing screen rendering and reducing memory consumption by over 20%.
- Led the migration of legacy Java codebases to modern Kotlin architecture with coroutines, flows, and dependency injection using Dagger-Hilt.
- Collaborated with backend teams to define mobile interfaces for controlling industrial IoT sensors and actuators, achieving low-latency communication.

- Created robust CI/CD pipelines using GitHub Actions and Azure DevOps, automating builds, test coverage, and Play Store deployment.
- Built automated testing suites using Espresso and Robolectric, increasing overall code coverage above 85% and reducing QA bugs by 30%.
- Integrated background services, push notifications, and Bluetooth Low Energy (BLE) modules to connect mobile UI with on-site hardware.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Architected and implemented scalable Android applications to support client advertising platforms using Kotlin, XML, and Jetpack libraries.
- Led UI modernization with Jetpack Compose to boost user experience and reduce XML layout complexity across modules.
- Created offline-first experiences using Room and caching strategies to ensure smooth operation in poor network environments.
- Integrated Firebase Cloud Messaging (FCM), Location Services, and Google Maps API for geo-targeted media delivery solutions.
- Refactored legacy RxJava flows to modern Kotlin Flow patterns, simplifying asynchronous logic and improving readability.
- Developed testable modules using Mockito, JUnit, and Espresso, increasing unit test reliability and build confidence.
- Improved app startup time by 40% by leveraging App Startup library and Lazy initialization strategies.
- Worked closely with QA to implement regression tests and crash analytics via Firebase Crashlytics and Sentry.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Delivered Android applications connected to smart home automation systems, integrating mobile interfaces with hardware over MQTT and WebSockets.
- Utilized custom hardware integration and real-time data display for temperature, lighting, and energy control on Android tablets and phones.
- Maintained Kotlin and Java hybrid projects and progressively refactored code into Kotlin using extension functions and sealed classes.
- Implemented location-based services and push notification triggers via geofencing and proximity events.
- Deployed applications across devices with varied screen resolutions by applying ConstraintLayout and custom theming.
- Built background sync jobs using WorkManager and AlarmManager to maintain real-time sensor updates without battery drain.
- Optimized build configurations and dependency resolution with Gradle, reducing app build time by 35%.
- Delivered weekly releases with automated GitLab CI/CD pipelines and shell scripting for APK distribution.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Participated in the delivery of lightweight Android clients for event tracking platforms using the Android SDK and Jetpack libraries.
- Integrated secure authentication using Google Sign-In and custom token-based mechanisms with server APIs.
- Helped build the first version of a mobile-first admin dashboard with hardware-level event tracking via REST APIs.
- Engaged in peer code reviews and delivered unit-tested components using Mockito and Robolectric.
- Applied user-centric principles for dashboard usability and tablet optimization.
- Maintained Git workflows and branching strategies within Agile delivery cycles.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in building Android apps for logistics and transportation companies using Kotlin and Java.
- Implemented real-time tracking interfaces for delivery drivers with Google Maps SDK integration.
- Developed reusable UI components and list adapters using RecyclerView and LiveData.
- Improved GPS accuracy and performance by adjusting fused location provider parameters.
- Participated in backend integration and debugging of API-based location updates.
- Conducted unit and UI testing using JUnit and Espresso under mentorship.
- Managed Git-based source control and learned code review practices.
- Documented development processes and collaborated with testers on issue triaging.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Associate Android Developer** – Google
- ❖ **AWS Certified Developer – Associate**
- ❖ **Google Cloud Digital Leader**
- ❖ **Jetpack Compose: Android Modern UI Toolkit** – Udemy
- ❖ **Advanced Android with Kotlin Nanodegree** – Udacity

PROJECTS

- ✓ **SmartHub Mobile Control App**
Developed an Android app allowing users to control and monitor IoT devices including thermostats, lights, and security systems. Built entirely in Kotlin using Jetpack Compose, Coroutines, and Room. Enabled secure real-time updates via WebSockets and AWS Lambda-backed APIs.

✓ **FleetTracker Logistics Platform**

Created an Android app for real-time vehicle tracking with integrated map view, push notifications, and geofencing features. Supported offline caching with Room and synchronized data via Retrofit and custom backend APIs.
