

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile Android Developer with 9+ years of engineering experience and 5+ years in mobile development, building feature-rich, secure, and scalable Kotlin-based Android apps. Expertise spans Jetpack Compose, Clean Architecture (MVVM/MVI), Koin, Coroutines, Firebase, OpenTelemetry, and Grafana. Passionate about creating observable and maintainable mobile systems with a focus on user experience, testability, and system health. Proven track record delivering modular, production-ready applications with CI/CD pipelines and modern DevOps integrations.

TECHNICAL SKILLS

- **Languages:** Kotlin, Java, TypeScript, Python, SQL
- **Mobile:** Jetpack Compose, Android SDK, MVVM, MVI, Navigation Component, Firebase Crashlytics, Firebase Auth, WorkManager, Room
- **Observability:** Grafana, OpenTelemetry, Firebase Performance, Firebase Analytics
- **Frameworks/Libraries:** Koin, Retrofit, Coroutines, LiveData, Flow, RxJava, Dagger (legacy), OkHttp
- **Tooling:** GitHub Actions, Git, Postman, JIRA, Confluence, GitHub, Android Studio
- **DevOps & CI/CD:** Docker, GitHub Actions, Firebase App Distribution
- **Cloud & Deployment:** Firebase, Heroku, Vercel, DigitalOcean
- **Monitoring & Dashboards:** Grafana Cloud, Firebase Monitoring, Google Play Console Metrics
- **Others:** REST, WebSockets, SQLite, Room, JWT, OAuth2, gRPC (basic)

WORK EXPERIENCE

Sensidev
Senior Software Engineer
September 2021 – December 2024
Timișoara, Romania

- Led the architecture and modularization of a complex Android application using MVVM and Clean Architecture, enabling better scalability and faster team onboarding.
- Designed and implemented REST API integration layers using Retrofit and Coroutines, supporting seamless connectivity with WebSocket fallbacks for real-time data syncing.
- Built robust state management using Kotlin Flows and ViewModels, improving UI responsiveness and memory efficiency across modules.
- Applied Koin for dependency injection across multi-feature modules, allowing dynamic object graphs and runtime flexibility.

- Developed custom Jetpack Compose UI components and themes, enhancing design consistency and reducing code duplication across feature sets.
- Integrated Firebase Crashlytics and OpenTelemetry, achieving 90% crash-free sessions and enabling proactive monitoring with Grafana dashboards.
- Collaborated with QA and product teams to implement observability KPIs and dashboards using Grafana Cloud and OpenTelemetry metrics.
- Delivered A/B test features behind feature flags and automated release tracks using Fastlane and GitHub Actions workflows.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Refactored a legacy Java codebase into Kotlin, increasing code maintainability and reducing runtime crashes by 40%.
- Implemented modular navigation architecture using Jetpack Navigation Component, improving UI flow isolation and back-stack handling.
- Built Room-based offline storage features to handle intermittent connectivity for campaign-based apps, maintaining seamless UX.
- Created custom observability tools with Firebase Performance Monitoring and Logcat tagging, reducing average ANR rate by 35%.
- Applied SOLID principles to refactor API layers into reusable service interfaces, ensuring testability and separation of concerns.
- Collaborated in agile squads using GitHub for version control and GitHub Actions for CI/CD, speeding up release cycles by 30%.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Delivered Android-first mobile solutions for HR and finance modules using Kotlin and Room for offline capability and local persistence.
- Developed reusable UI components using ConstraintLayout and ViewBinding, reducing development time for new screens by 25%.
- Wrote robust unit and UI test suites using JUnit and Espresso, achieving >90% coverage on all new modules.
- Created custom Koin scopes for authentication and user session management across modules.
- Conducted performance profiling with Android Profiler to reduce app startup time from 3.2s to 1.7s.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Designed lightweight Android clients to visualize business KPIs by connecting to REST endpoints and rendering data with custom RecyclerView components.
- Implemented lifecycle-aware components for tracking user behavior and app state across multiple activity/fragment stacks.
- Supported Firebase integration for push notifications, crash tracking, and real-time feature toggles based on user segmentation.

- Refactored legacy modules using Kotlin extensions and sealed classes to improve code readability and reduce null-pointer exceptions.
- Participated in agile sprint planning, estimating Android tickets, and collaborating cross-functionally on end-to-end product delivery.
- Assisted with Play Store deployments and release cycles for internal QA and UAT testers, coordinating feedback loops with stakeholders.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Developed Kotlin-based utility scripts for parsing JSON API responses and storing results in SQLite databases for internal dashboards.
 - Created prototypes using basic Android UI widgets and ViewModels to demonstrate mock client flows for future app development.
 - Contributed to early microservice experimentation with background sync services and notification testing via Firebase.
 - Assisted in API testing using Postman and supported backend teams in validating mobile payloads and response handling.
 - Participated in bug triage meetings and documented common issues affecting early-stage app stability and UI flows.
 - Shadowed Android engineers and contributed to onboarding scripts, test suites, and local emulator setup for new joiners.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Kotlin for Android Developers** – JetBrains Academy
 - ❖ **Android Jetpack Masterclass** – Udemy
 - ❖ **Firebase Crashlytics & Performance Monitoring** – Google Training
 - ❖ **Docker for Developers** – Udemy
 - ❖ **Python for Data Science** – Coursera
-

PROJECTS

- ✓ **Restaurant Management App (SpotOn-style Clone)**
Designed an Android app using Clean Architecture and MVVM with Jetpack Compose UI, handling orders, payments, and user roles. Integrated OpenTelemetry and Firebase for full-stack observability.
- ✓ **Realtime Dashboard**
Built an Android app featuring WebSocket live updates using Kotlin Flows. Observability implemented with Grafana and Firebase APM for session tracking and crash analytics.

✓ **CI/CD Pipeline for Mobile Releases**

Created GitHub Actions workflows to automate Android builds, run tests, and deploy artifacts to Firebase App Distribution with Slack notifications on deployment success/failure.
