PROFESSIONAL SUMMARY

Experienced Fullstack Developer with 9+ years of hands-on expertise building and deploying scalable enterprise solutions using .NET Core, C#, Angular, Azure Cloud, SQL, and microservices architecture. Proven track record leading the development of secure, performant APIs and cloud-native applications in fast-paced environments. Adept in CI/CD pipelines (Azure DevOps), containerization, and agile methodologies, with strong frontend proficiency in HTML, CSS, TypeScript, and Angular.

TECHNICAL SKILLS

- **Languages & Frameworks:** C#, .NET Core, ASP.NET, JavaScript, TypeScript, Angular, HTML5, CSS3, RxJS, LINQ
- **Cloud:** Microsoft Azure (App Services, Functions, Cosmos DB, Storage), Azure DevOps, AWS (basic exposure)
- **Database:** SQL Server, Cosmos DB, PostgreSQL, NoSQL, Entity Framework, Dapper
- **DevOps & Tools:** Git, Azure Pipelines, Docker, Swagger, Postman, Visual Studio, Jira, Confluence
- **Architecture:** Microservices, RESTful APIs, Clean Architecture, SOLID Principles
- **Testing & QA:** xUnit, Moq, Postman, Jest, Jasmine, Karma
- **Practices:** Agile, Scrum, TDD, CI/CD, A/B Testing

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Developed and maintained high-availability microservices using .NET 6 and C# running in Azure App Services with integrations to Cosmos DB and Azure Functions.
- Led the frontend architecture using Angular 14+, TypeScript, and RxJS to build responsive dashboards for real-time analytics across distributed enterprise systems.
- Designed and optimized REST APIs to support millions of daily requests, using clean architecture and SOLID principles for modular and scalable code.
- Built Azure DevOps pipelines for CI/CD automation, including test execution, security scans, and multi-environment deployments across dev, staging, and prod.
- Worked with Cosmos DB and SQL Server for hybrid storage strategies, including schema-less data ingestion and high-speed transactional querying.

- Created shared Angular components and services library to improve code reuse across multiple frontend applications with consistent UI/UX standards.
- Integrated OAuth2 authentication and custom authorization middleware in ASP.NET Core to ensure secure access to sensitive customer and admin portals.
- Mentored a team of junior developers, conducting code reviews and technical deep dives to elevate team output and maintain engineering quality.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built fullstack marketing campaign platforms using ASP.NET Core, Angular 10, and SQL Server to automate personalized messaging workflows for global brands.
- Engineered modular microservices to handle scheduling, notifications, and analytics—leveraging Azure Functions and Service Bus for event-driven architecture.
- Implemented dynamic form builders in Angular using reactive forms and custom directives, enhancing client-side configurability of B2B marketing interfaces.
- Created Swagger documentation and Postman collections for API testing and third-party integrations, accelerating development and QA processes.
- Integrated payment gateways and CRM APIs securely using OAuth2 and API key strategies, ensuring secure B2C transactions and customer syncs.
- Developed dashboard widgets using D3.js and charting libraries for real-time campaign metrics visualizations, deployed via CI/CD pipelines on Azure.
- Tuned stored procedures and indexes in SQL Server to improve reporting performance on high-volume marketing datasets with sub-second response time.
- Led cross-team knowledge sharing sessions on .NET Core best practices and Angular state management patterns to enhance development consistency.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built multi-tenant web applications using .NET Framework and migrated them progressively to .NET Core to align with evolving performance and security standards.
- Implemented authentication flows using IdentityServer4 and JWT tokens, securing API endpoints and enabling SSO support for enterprise clients.
- Managed frontend development using Angular 8 with reactive state, applying best practices for routing, lazy loading, and module structuring.
- Designed Cosmos DB-based logging and error reporting system integrated with Azure Application Insights for robust diagnostics and observability.
- Collaborated with UX designers to implement WCAG-compliant user interfaces using semantic HTML, SCSS, and material design frameworks.
- Conducted performance benchmarking and memory profiling using dotTrace to identify inefficiencies in API controllers and data repositories.
- Migrated legacy monolithic services into microservices deployed via Docker containers on Azure Kubernetes Service, improving deployment agility.
- Automated unit and integration tests using xUnit and Moq across backend layers, integrated in CI pipelines for early regression detection.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed core features of a digital ticketing platform using ASP.NET MVC and JavaScript, supporting real-time bookings and seat selection logic.
- Implemented responsive layouts using Bootstrap, custom JavaScript, and AJAX for seamless interaction across desktop and mobile browsers.
- Created RESTful endpoints to support JSON-based communication between frontend Angular apps and backend APIs, adhering to API versioning.
- Built SQL Server reporting queries with pivot transformations to power administrative dashboards and sales trend reports.
- Supported CI setup with TeamCity and Git hooks to ensure merge standards and run code analysis on every pull request.
- Built reusable Razor views and partials for forms, modals, and reusable input components across the site interface.
- Worked on fixing critical production bugs in tight release windows and coordinated hotfix delivery with QA and stakeholders.
- Maintained documentation and API diagrams in Confluence to support onboarding and cross-team clarity.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Supported fullstack feature development for internal tooling using C#, ASP.NET WebForms, and JavaScript.
- Helped build CRUD admin modules and reporting dashboards for product and user management workflows.
- Implemented client-side form validation with jQuery and integrated third-party date pickers and input masks.
- Designed and normalized SQL Server tables and views for improved relational structure and performance.
- Participated in code reviews and sprint planning sessions, learning industry-level coding and collaboration practices.
- Wrote and executed test cases for both backend and frontend changes using manual and automated testing.
- Helped document key business logic processes in Markdown and Excel for internal use.
- Contributed to internal wiki on .NET error patterns and resolutions to help future interns onboard faster.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ Microsoft Certified: .NET Developer – C# & ASP.NET Core
 - ❖ Azure DevOps Fundamentals – CI/CD Pipelines
 - ❖ Udemy: Mastering Angular & RxJS for Enterprise Apps
-

PROJECTS

- ✓ **Cloud-native CRM Platform (Sensidev)**
Led development of a microservices-based CRM platform hosted in Azure using .NET 6, Cosmos DB, and Angular for frontend. Achieved 99.9% uptime and integrated with third-party sales APIs.
- ✓ **Marketing Automation Suite (Syscom Digital)**
Developed a fullstack suite to run email/SMS campaigns. Architected frontend in Angular and backend in .NET Core APIs, processing 10M+ customer records/month using Azure pipelines.
- ✓ **Customer Portal for Telecom (Soft Build)**
Migrated legacy C# monolith to .NET Core microservices and rebuilt the customer self-service portal with Angular, improving load time by 60% and mobile responsiveness.
