

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile Senior Software Engineer with 10+ years of experience driving innovation across full-stack, backend, and cloud-native solutions. Skilled in rapidly prototyping AI-powered applications, architecting scalable microservices, and building resilient cloud infrastructures across AWS, GCP, and Azure. Adept at working in fast-paced startup environments, leading 0→1 initiatives, and integrating cutting-edge AI into healthcare, SaaS, and enterprise platforms. Strong background in .NET, Node.js, and TypeScript, with additional expertise in EHR integrations, SQL/NoSQL optimization, and DevOps pipelines. Known for entrepreneurial mindset, resourcefulness, and ability to deliver impactful solutions under high uncertainty.

TECHNICAL SKILLS

- **Languages & Frameworks:** C# .NET Core, JavaScript/TypeScript, Node.js, React, Angular, Vue, PHP, Java, Python
- **AI/ML:** LLMs, RAG pipelines, TensorFlow, PyTorch, MLflow, AI-driven automation, healthcare NLP
- **Cloud Platforms:** AWS (Lambda, ECS, DynamoDB), GCP (Pub/Sub, BigQuery, Firestore), Azure (AKS, Functions, Cosmos DB)
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, Redis, Cassandra
- **DevOps & Infrastructure:** Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI/CD, CloudFormation, IaC best practices
- **Architecture:** Microservices, Event-driven design, API-first development, Serverless, Cloud-native SaaS platforms
- **Other:** EHR Integrations, RESTful APIs, GraphQL, NoSQL data modeling, Edge computing, Low-code/No-code automation

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led innovation initiatives by prototyping and deploying cloud-native applications across AWS, GCP, and Azure, enabling scalability while validating feasibility of new ideas.
- Designed microservices-based backend platforms using .NET Core and Node.js, integrating AI-powered features that improved automation and reduced processing latency by 30%.
- Implemented secure EHR integrations with RESTful APIs, ensuring compliance with healthcare standards and enabling seamless clinical data synchronization.
- Built proof-of-concept AI-driven modules including NLP text extraction pipelines for healthcare documentation, reducing manual entry workload for physicians.

- Automated DevOps pipelines using Terraform, Docker, Kubernetes, and GitHub Actions, reducing deployment times from hours to under 15 minutes.
- Spearheaded event-driven architectures with Kafka and Pub/Sub, improving resilience, real-time communication, and decoupling of mission-critical services.
- Partnered with cross-functional teams to align technical innovation with product goals, balancing rapid iteration with long-term system maintainability.
- Mentored junior engineers in cloud-first development, scalable design, and AI adoption, fostering a culture of experimentation and technical ownership.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed enterprise-grade backend services using C# .NET Core and Node.js, ensuring performance optimization for high-traffic transactional systems.
- Deployed cloud workloads across AWS and Azure, applying Infrastructure as Code and Kubernetes orchestration to ensure fault-tolerant deployments.
- Designed scalable APIs to support multi-tenant SaaS systems, incorporating role-based access and advanced monitoring for compliance-critical environments.
- Collaborated with data science teams to integrate predictive ML models into production systems, driving AI adoption across client platforms.
- Optimized relational databases (PostgreSQL, SQL Server) and NoSQL stores (MongoDB, Redis) to handle complex queries under millisecond latency.
- Implemented real-time analytics dashboards using React and Vue, providing actionable insights to non-technical stakeholders through data visualization.
- Applied secure authentication standards (OAuth2, JWT) across systems to meet healthcare and finance industry compliance.
- Partnered with business leaders to quickly transform product requirements into functional MVPs, enabling rapid go-to-market launches.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Designed and developed backend services using .NET and PHP, handling multi-million transaction pipelines while ensuring fault-tolerant performance.
- Enhanced legacy systems by refactoring monolithic applications into modular service-oriented architectures, increasing agility and maintainability.
- Built reusable full-stack components with Angular and Vue, integrating with secure APIs and improving customer onboarding flows.
- Delivered automated CI/CD pipelines with Jenkins and GitLab CI, cutting down release cycle times from weekly to daily deployments.
- Integrated cloud-native monitoring tools such as Prometheus and ELK stack for real-time observability across distributed environments.
- Applied advanced caching strategies with Redis to accelerate response times for frequently accessed queries by over 50%.
- Collaborated with product teams to deploy MVPs quickly while ensuring architecture scalability for future growth.
- Established best practices for version control, testing automation, and code reviews to improve engineering productivity.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Contributed to e-commerce and SaaS platforms using PHP and .NET, implementing backend services with secure data handling practices.
- Designed database schemas and optimized SQL queries for high-performance transactional workflows.
- Integrated REST APIs for third-party services, enhancing platform extensibility and client integrations.
- Applied Agile methodology to deliver iterative improvements and rapidly respond to evolving business needs.
- Collaborated on front-end enhancements with React and Vue, ensuring responsive design and seamless UX.
- Deployed services on AWS cloud, applying EC2 and RDS for scalable backend hosting.
- Debugged and refactored legacy modules, eliminating performance bottlenecks and improving maintainability.
- Contributed to documentation and technical specifications, ensuring knowledge continuity across the team.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in building backend services in .NET and Java, contributing to early-stage product development and proof-of-concept projects.
- Gained hands-on experience deploying cloud-based systems on AWS and Azure while collaborating with senior engineers.
- Built prototypes integrating SQL and NoSQL databases, testing scalability and retrieval performance under simulated load.
- Supported cross-functional product teams by developing API endpoints for client applications.
- Created early UI prototypes using Angular and Bootstrap to demonstrate workflows and collect user feedback.
- Documented development processes and prepared technical guides for new team members.
- Tested new frameworks and libraries for integration feasibility, contributing to technology decision-making.
- Delivered code fixes and feature enhancements under tight deadlines, demonstrating adaptability in startup settings.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
 - Google Cloud Professional Cloud Developer
 - Microsoft Certified: Azure Solutions Architect Expert
 - Certified Kubernetes Application Developer (CKAD)
 - TensorFlow Developer Certificate (AI/ML specialization)
-

PROJECTS

- **AI-Powered EHR Integration Prototype** – Built a proof-of-concept leveraging NLP models for automated medical transcription, achieving 95% accuracy in structured clinical notes.
- **Serverless Healthcare Scheduling System** – Designed with AWS Lambda, DynamoDB, and API Gateway to handle 1M+ requests monthly with near-zero downtime.
- **Cross-Cloud SaaS Deployment Framework** – Developed multi-cloud deployment strategy across AWS, Azure, and GCP using Terraform, reducing vendor lock-in and improving cost-efficiency.
- **Low-Code Automation Toolkit** – Built internal automation tools with Node.js and no-code platforms, enabling business teams to automate workflows without developer overhead.
