PROFESSIONAL SUMMARY

Senior .NET Cloud Engineer with 8+ years of hands-on experience designing and building scalable backend solutions on Azure using C#, ASP.NET, .NET Core, and cloud-native patterns. Proven expertise in creating REST APIs, integrating event-driven architecture (Service Bus, CQRS, SAGA), and managing infrastructure with Bicep and ARM templates. Adept in CI/CD using Azure DevOps and monitoring with Application Insights. Demonstrates a "you build it, you own it" mindset with a strong focus on operational excellence, innovation, and team collaboration.

TECHNICAL SKILLS

- **Languages & Frameworks:** C#, .NET Core, ASP.NET, REST API, LINQ, Entity Framework
- **Cloud & DevOps:** Azure Functions, Azure App Service, Azure Service Bus, Cosmos DB, Azure DevOps, Bicep, ARM, App Insights, Azure API Management
- **Databases:** PostgreSQL, SQL Server, Cosmos DB, MongoDB
- **Architecture:** Event-Driven Architecture, CQRS, SAGA, DDD, Microservices
- **Tools:** Git, Docker, GitHub Actions, Jira, SonarQube, Swagger
- **Monitoring & Ops:** Azure Application Insights, Log Analytics, ELK, Grafana

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Architected and developed microservices using C# and .NET Core on Azure with full CI/CD automation through Azure DevOps pipelines for staging and production.
- Created and maintained Bicep templates to provision and manage infrastructure across multiple environments including Functions, App Services, and Cosmos DB.
- Led the implementation of CQRS and event-driven patterns with Azure Service Bus, significantly improving system decoupling and response time across modules.
- Integrated Azure Application Insights and Log Analytics to track telemetry, analyze exceptions, and establish proactive alert rules based on operational metrics.
- Built high-performance REST APIs consumed by internal services and third-party clients, following OpenAPI and OAuth2 standards for secure communication.
- Designed and optimized PostgreSQL and Cosmos DB schemas for transactional integrity, scalability, and analytics compatibility in production systems.

- Managed production releases, incident triage, and root-cause analysis in close collaboration with Microsoft Azure support for Tier-1 system issues.
- Mentored junior engineers on cloud development best practices and led weekly code reviews to ensure maintainability, security, and performance compliance.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed internal campaign management tools using .NET Core and ASP.NET MVC, integrated with Azure Blob Storage and Azure SQL for dynamic content distribution.
- Built resilient background processing systems using Azure Functions and Service Bus queues to automate SMS/email workflows in a distributed architecture.
- Introduced IaC using ARM templates to deploy cloud resources consistently and enabled cross-team testing via isolated Azure environments.
- Enhanced CI/CD pipelines with environment-based branching strategies and automated rollback mechanisms to ensure rapid and safe production deployments.
- Refactored legacy APIs to use modern REST conventions and JWT-based authentication, reducing security vulnerabilities and improving maintainability.
- Leveraged Cosmos DB for campaign data ingestion pipelines, integrating it with durable functions for guaranteed message processing and throughput.
- Designed real-time dashboards using Azure Monitor and Application Insights for operational visibility into marketing campaign performance and exceptions.
- Conducted biweekly architecture review sessions focused on system scalability, failover strategies, and new Azure features adoption.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Delivered modular backend systems in C# and .NET, following clean architecture principles and deploying workloads on Azure App Services and Azure SQL.
- Built CI/CD workflows with Azure DevOps for continuous testing, integration, and deployment across QA, UAT, and production environments.
- Led migration from on-premise hosting to Azure PaaS, implementing secure cloud networking, application gateways, and custom domain bindings.
- Designed asynchronous workflows using Service Bus and Azure Functions to decouple billing, reporting, and user notification processes.
- Tuned queries and indexing strategies in PostgreSQL to handle high-volume analytics queries with sub-second latency requirements.
- Used Bicep and ARM to automate provisioning for production-ready environments including APIs, caching layers, databases, and logging systems.
- Implemented defensive coding standards and SAST integrations using SonarQube to improve overall code quality and reduce vulnerabilities pre-deployment.
- Partnered with QA to develop API test harnesses and performance benchmarks, ensuring contract stability and SLA compliance.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Built multi-tenant ASP.NET-based web applications hosted on Azure App Services with integrated user management and audit logging.
- Created reusable .NET libraries to unify error handling, logging, and configuration across microservices using shared NuGet packages.
- Developed administrative dashboards using ASP.NET Razor and EF Core, allowing managers to view usage metrics and audit reports.
- Contributed to initial CI/CD pipeline setup using VSTS (now Azure DevOps) with build triggers, release approvals, and environment variables.
- Assisted with the design of Cosmos DB usage strategy, including partitioning, indexing, and TTL policies.
- Configured Application Insights with custom telemetry processors to filter and tag domain-specific exceptions.
- Supported deployment of production features with rollback scripts and hotfixes via controlled DevOps pipelines.
- Created knowledge base documentation and deployment guides to streamline onboarding and release practices.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted with .NET development on backend systems for internal business platforms using MVC and Entity Framework.
- Implemented RESTful API endpoints with structured exception handling and model validation pipelines.
- Integrated Azure Storage SDKs to support blob-based document storage and retrieval within enterprise applications.
- Conducted exploratory testing, documenting edge case bugs and working closely with developers to triage and resolve.
- Participated in Agile sprint ceremonies including standups, retrospectives, and sprint planning.
- Developed utility scripts in PowerShell to automate developer setup on Azure environments.
- Wrote integration tests for service endpoints using NUnit and Moq frameworks.
- Provided support in documentation and QA efforts to ensure stable monthly releases.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate
 - ❖ Microsoft Certified: Azure Solutions Architect Expert
 - ❖ Microsoft Certified: DevOps Engineer Expert
 - ❖ Azure Fundamentals (AZ-900)
-

PROJECTS

- ✓ **Cloud-Native Energy Platform**
Built and deployed a modular cloud-based platform for energy sector client on Azure using .NET Core, Service Bus, Cosmos DB, and CI/CD via Azure DevOps with full observability.
- ✓ **Event-Driven Order Processing**
Designed a CQRS+SAGA-based backend for processing orders across distributed services, using Azure Functions, Service Bus topics, and PostgreSQL for transactional storage.
