

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Python Developer with 7+ years in backend engineering, specializing in FastAPI, REST APIs, microservices, and scalable data-driven applications. Proven track record of designing efficient Python services, modeling data for both SQL and NoSQL databases, and deploying reliable production systems. Strong foundation in testing, API architecture, and agile delivery. Passionate about automation, code clarity, and cross-functional collaboration in dynamic startup environments.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, FastAPI, Flask, Pydantic, Node.js, JavaScript
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
- **Architecture:** RESTful APIs, Microservices, Event-driven systems
- **Testing & Quality:** Pytest, unittest, Coverage, Linters, Type hints
- **Tools & DevOps:** Docker, Git, GitHub Actions, CI/CD, Jenkins
- **Cloud Platforms:** AWS (Lambda, ECS, S3, CloudWatch), GCP (Cloud Run, Firestore)
- **Other:** SQL, NoSQL, Design Patterns, Agile/Scrum, Jira, Swagger/OpenAPI

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Developed robust RESTful APIs using FastAPI and Pydantic to streamline integration between internal microservices and external partner systems.
- Led the migration of legacy Flask codebases to FastAPI with improved response performance, type safety, and modularity.
- Engineered backend services handling high-volume data processing pipelines using MongoDB and PostgreSQL, achieving over 40% reduction in DB latency.
- Designed and documented complex API schemas using OpenAPI, enabling smoother front-end collaboration and third-party usage.
- Authored and maintained over 500 unit and integration tests using Pytest with >95% code coverage across microservices.
- Integrated CI/CD workflows with GitHub Actions and Docker to automate testing, linting, and deployments to AWS ECS.

- Collaborated with frontend, DevOps, and data engineering teams to solve end-to-end delivery challenges using agile sprints.
- Participated in regular architecture reviews, introducing design patterns that improved code reuse and reduced bug rates.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built scalable backend APIs and business logic in Python using Flask and transitioned services gradually to FastAPI for better modularity and validation.
- Designed data models for both relational and document-based storage using PostgreSQL and MongoDB, aligned to analytics and reporting needs.
- Automated regression test suites using Pytest and integrated with CI pipelines, cutting manual QA hours by 60%.
- Supported third-party service integrations (Twilio, Firebase, AWS SES) to expand marketing automation capabilities.
- Employed linters and static typing across Python codebases to ensure consistency, readability, and maintainability.
- Refactored monolithic components into microservices, resulting in improved scalability and fault isolation.
- Wrote documentation and API specs using Swagger, boosting internal onboarding and partner integrations.
- Applied agile principles in distributed teams, owning user stories from estimation through delivery and review.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Implemented business-critical backend logic for custom ERP platforms using Python and PostgreSQL, processing millions of records daily.
- Developed REST APIs and backend modules for logistics, accounting, and HR applications, optimizing endpoint performance by 35%.
- Led test-driven development practices with Pytest, building test coverage from scratch across multiple legacy modules.
- Modeled and indexed NoSQL structures using MongoDB to support flexible client requirements in metadata-heavy domains.
- Introduced version control with Git across teams and trained junior developers in clean coding standards and Git workflows.
- Contributed to devops practices by setting up Docker containers and staging environments for QA and product teams.
- Participated in biweekly sprint planning and retrospectives, delivering stable features aligned with product roadmap.
- Liaised with frontend teams to coordinate API contracts and enforce schema versioning protocols.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Developed RESTful services in Flask to support internal dashboard tools and real-time analytics integrations.
- Collaborated with the design team to structure backend routes supporting complex filtering and pagination in UI.
- Used Pydantic-like validators to enforce data structures before FastAPI was mainstream, ensuring robust service behavior.
- Connected MySQL databases with SQLAlchemy ORM, enabling easier querying and performance tuning.
- Wrote test scripts to simulate API usage across various edge cases and endpoints.
- Maintained codebase quality through adherence to PEP8, docstrings, and team-wide linter policies.
- Deployed staging environments and handled database migration scripts as part of feature delivery.
- Assisted in preparing technical documentation for internal stakeholders and product leads.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Built internal tools using Python and PostgreSQL to automate reporting tasks and CSV ingestion pipelines.
- Developed basic REST APIs using Flask and deployed prototypes to internal testing environments.
- Learned fundamental software architecture and data modeling principles under senior mentorship.
- Participated in code reviews and pair programming sessions to improve test-driven design habits.
- Integrated Excel and JSON file processors to support multiple import/export flows.
- Used Git for version control and JIRA for task tracking across sprints.
- Collaborated with QA to validate end-to-end business scenarios across multiple data sources.
- Documented code and test cases for future interns and junior devs.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- Python for Everybody Specialization – University of Michigan
 - Scalable Microservices with Kubernetes – Udacity
 - MongoDB for Developers – MongoDB University
 - AWS Certified Developer – Associate
 - Google Cloud Digital Leader
-

PROJECTS

- **ElectroAPI Engine**
Built a modular Python backend using FastAPI to deliver reusable component metadata and design logic to frontend systems. Optimized MongoDB indexing for fast component search.
- **CI Dashboard**
Developed a microservice-based dashboard with FastAPI + PostgreSQL, visualizing CI/CD pipeline health metrics for distributed teams.
- **DocParserAI**
Built a text extraction and classification backend using Pydantic and custom OCR models, supporting structured document ingestion for pharmaceutical clients.
