

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 8+ years of experience in architecting and delivering scalable backend systems and AI/ML-powered applications. Proficient in Python and cloud-native development, with a strong focus on integrating generative AI, classical ML models, and intelligent APIs into production systems. Proven expertise in Kubernetes, AWS Lambda, Docker, and CI/CD workflows. Adept at collaborating with cross-functional teams, driving backend innovation, and bridging research with engineering for real-world impact.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, FastAPI, Flask, JavaScript, Node.js, TypeScript, Bash
- **AI/ML Libraries:** scikit-learn, Hugging Face Transformers, OpenAI APIs, TensorFlow (basic)
- **Cloud & DevOps:** AWS (Lambda, ECS, S3, CloudWatch), GCP (Compute, Pub/Sub, Cloud Functions), Docker, Kubernetes, Terraform
- **Data & Storage:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Firebase, Elasticsearch
- **Tools & Platforms:** Git, GitHub Actions, Jenkins, CircleCI, Pytest, Postman, JIRA, VS Code
- **Other:** RESTful APIs, Microservices, CI/CD pipelines, NoSQL, SQL, Data Pipelines, Application Monitoring

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented cloud-native AI-powered backend services using FastAPI and Python to support real-time document intelligence and NLP classification tasks.
- Built and deployed scalable APIs integrating Hugging Face models and OpenAI services for generative document summarization and semantic matching.
- Architected and managed Kubernetes-based deployments on AWS EKS, with automated scaling and monitoring via Prometheus and CloudWatch.
- Developed and maintained CI/CD pipelines with GitHub Actions and Jenkins for continuous deployment of microservices into AWS Lambda and Docker environments.
- Integrated MongoDB and PostgreSQL with SQLAlchemy and Pydantic for high-performance structured/unstructured data processing in ML pipelines.

- Collaborated with research and data science teams to move experimental models into production, emphasizing compliance, monitoring, and fault tolerance.
- Designed asynchronous task queues using Celery and Redis to handle large-scale text data preprocessing and inference workloads.
- Spearheaded code quality initiatives with Pytest, Flake8, and black formatting, reducing bugs in production releases and improving onboarding speed.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed backend services using Flask and FastAPI to power intelligent marketing automation workflows, including behavior-triggered campaigns and chatbot interactions.
- Built cloud-native APIs hosted on AWS Lambda and integrated with S3 and API Gateway for scalable mobile and web platform connectivity.
- Maintained structured and unstructured data layers across MongoDB and Firebase Firestore, applying optimal indexing strategies to support high throughput.
- Led the integration of machine learning modules using scikit-learn for dynamic segmentation, churn prediction, and personalized content delivery.
- Automated CI/CD pipelines with GitLab CI and Dockerized microservices for zero-downtime releases across staging and production.
- Instrumented services with Sentry and custom health probes to improve error tracing and system observability in real-time environments.
- Mentored junior developers in writing maintainable Python code, REST API design, and scalable data flows.
- Partnered with UX teams to implement server-side analytics and optimize load times for marketing dashboards and campaign reports.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Created modular Python services that supported enterprise integration of product catalogs, search engines, and inventory management platforms.
- Designed and optimized PostgreSQL queries and indexes for multi-region data access, ensuring low-latency API responses and data consistency.
- Built real-time REST APIs consumed by Angular and React frontends, ensuring full-stack responsiveness and performance monitoring.
- Engineered internal tools for anomaly detection in data ingestion pipelines, leveraging pandas and basic ML classifiers.
- Used Docker Compose to simulate production environments locally, enabling robust testing and developer productivity.
- Automated backup and restore flows with AWS S3 lifecycle policies and Boto3 scripts to reduce manual error-prone workflows.
- Participated in regular architecture reviews to propose migration paths from monoliths to event-driven microservices.
- Collaborated across QA and PM teams to deliver feature-rich releases using Agile and continuous delivery practices.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Supported the development of e-commerce API platforms with integrations to payment gateways and external CRMs using Python and JavaScript.
- Designed custom backend services with Flask and PostgreSQL to serve high-volume product listing pages.
- Created scalable endpoints to support filtering, faceting, and product search over 100k+ SKUs.
- Refactored legacy monolithic endpoints into modular service layers to enhance maintainability and code coverage.
- Built unit and integration tests to increase backend coverage from 40% to 85% using Pytest.
- Participated in planning meetings to align API structure with frontend rendering requirements.
- Automated regression test cases using Selenium for web application workflows.
- Improved performance by optimizing database joins and limiting N+1 query patterns.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in building internal inventory tracking systems using Python and MySQL.
- Wrote Python scripts to automate report generation, data cleanup, and hardware status alerts.
- Supported REST API design and implementation for mobile device provisioning workflows.
- Built internal dashboards for monitoring devices and licenses using JavaScript and Chart.js.
- Improved performance of internal tools by rewriting logic-heavy routines in compiled C extensions.
- Integrated error logging via Sentry and email-based alerts to reduce system downtime.
- Gained exposure to Linux server administration and deployment scripting with Bash and cron jobs.
- Participated in daily standups and sprint planning to align project priorities and personal development goals.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2023)
 - Google Cloud Professional Cloud Developer (2024)
 - Hugging Face NLP Specialist Certification (2024)
 - DataCamp – Building AI Applications with Python (2023)
-

PROJECTS

AI-Powered Regulatory Document Analyzer

- Developed a Python-based pipeline to parse, classify, and summarize regulatory PDF documents using OpenAI GPT models, deployed on AWS Lambda and Step Functions.
- Leveraged Hugging Face Transformers and scikit-learn for hybrid classification and rule-based tagging of drug-related regulatory content.

Microservice Deployment Orchestrator (Kubernetes)

- Led the design of a Python-based internal tool to manage deployment of ML microservices into EKS clusters, with Helm-based templates and autoscaling logic.
- Included Sentry, Prometheus, and custom alert rules to support ops team observability.

Generative Content Engine

- Architected and deployed a RESTful service using FastAPI and OpenAI to generate personalized summaries and product listings.
- Used Celery with Redis and monitored job queues with Flower and Grafana dashboards.
