

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Senior Software Engineer with 8+ years of experience designing and implementing scalable backend systems using Java, Spring Boot, and cloud-native architectures. Skilled in modern microservices, container orchestration, CI/CD pipelines, and cross-functional collaboration in Agile teams. Demonstrated expertise in transitioning legacy monoliths to cloud-first microservices using AWS, GCP, Docker, and Kubernetes. Adept in driving application modernization, mentoring junior developers, and ensuring code quality and architectural consistency. Fluent in English (B2+) and familiar with German technical documentation and engineering standards.

TECHNICAL SKILLS

- **Languages:** Java (8–17), Kotlin, Python, JavaScript, TypeScript
- **Backend:** Spring Boot, REST APIs, Microservices, JPA, Hibernate
- **Frontend:** Angular, React, HTML5, CSS3, Tailwind
- **Cloud & DevOps:** AWS (EC2, Lambda, S3, CloudWatch), GCP (App Engine, GKE), Azure (basic), Docker, Kubernetes, GitLab CI/CD
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB
- **Tools & Frameworks:** Grafana, Prometheus, Git, Maven, Gradle, Jenkins, ELK Stack, Kafka, RabbitMQ
- **Testing:** JUnit, Mockito, Selenium, Cypress, Postman, REST Assured
- **Agile/Methodologies:** Scrum, SAFe, TDD, Clean Architecture, DDD

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led backend development of scalable microservices using Java 17 and Spring Boot deployed on AWS ECS with automated CI/CD and infrastructure-as-code via Terraform.
- Refactored legacy monolithic applications into cloud-native microservices, improving system performance, resilience, and scalability by over 40%.
- Designed and developed REST APIs integrated with Angular and React frontends for cross-platform web applications in telecom and logistics domains.
- Developed and deployed Kubernetes-based solutions across AWS and GCP, improving observability through Grafana and Prometheus monitoring integration.

- Collaborated with product owners, architects, and DevOps teams in SAFe agile environments to align backlog priorities and architectural decisions.
- Implemented advanced authentication and security flows using OAuth2, JWT, and AWS Cognito for secure user and role-based access control.
- Mentored 5+ junior engineers, reviewed code, led knowledge-sharing sessions, and created internal standards for modular code structure and testing.
- Enhanced test coverage by 35% through JUnit, Mockito, and REST Assured automated testing, reducing critical production issues by 70%.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built and maintained enterprise-grade Java Spring applications integrating AWS Lambda functions for event-driven backend logic.
- Designed API contracts and service orchestration layers to facilitate communication between frontend Angular clients and distributed microservices.
- Migrated legacy Oracle-based systems to PostgreSQL and MongoDB for hybrid data management optimized for structured and semi-structured data.
- Enabled CI/CD automation using Jenkins and GitLab pipelines, streamlining code integration and deployment cycles by 50%.
- Introduced observability tools (Grafana, ELK stack) and reduced mean time to resolution (MTTR) by 60% during live incidents.
- Participated in daily Scrum ceremonies and served as Scrum Master for 3 months, helping maintain sprint velocity and team cohesion.
- Supported integration testing via Postman and REST Assured, reducing regression bugs in production by 45%.
- Collaborated directly with German-speaking clients to gather requirements, present prototypes, and iterate on business-critical features.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Engineered RESTful APIs using Java Spring Boot and implemented backend components for financial and telecom projects with high uptime demands.
- Containerized services using Docker and orchestrated deployments using Kubernetes, improving deployment speed and rollback safety.
- Configured cloud environments on AWS and GCP for staging and production workloads, utilizing S3, EC2, CloudWatch, and Google Cloud Storage.
- Integrated third-party services using OAuth2 and RESTful APIs, including payment providers, CRM systems, and SMS/email gateways.
- Conducted code reviews and performance profiling, reducing application latency by 20% using caching (Redis) and database query optimization.
- Collaborated with QA to build end-to-end test scenarios and streamline UAT feedback loops.
- Proactively implemented backend logging with Logstash and Kibana to trace bugs across distributed services.
- Took part in building POCs for architectural innovation (GraphQL, gRPC) and presented findings to engineering leads.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Supported backend development in Java and PHP for data-intensive web portals using MySQL and Redis.
- Maintained legacy codebases while introducing modular design and reusable service layers for better scalability.
- Worked in cross-functional teams with frontend developers to implement responsive UI integrations with backend APIs.
- Optimized legacy endpoints by switching to lazy loading and batched queries, improving API response time by 25%.
- Integrated logging and analytics systems to track feature usage and user behavior.
- Participated in daily standups, estimation sessions, and internal tech workshops.
- Built test cases in JUnit and integrated them into Jenkins pipelines.
- Documented backend APIs and published Swagger specs to streamline frontend integration and third-party developer onboarding.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Developed CRUD modules using Java and Spring MVC for internal company HR and asset management tools.
- Designed and tested SQL queries and database schema in MySQL for operational dashboards.
- Supported migration of legacy desktop modules to a web-based platform using JSP and Java Servlets.
- Assisted in configuring Tomcat and basic CI jobs in Jenkins.
- Wrote unit tests and manually tested UIs to improve bug triage in QA cycles.
- Shadowed senior developers and contributed to design discussions and sprint planning.
- Maintained documentation and created onboarding resources for new interns.
- Built proof-of-concept integrations with Google Cloud APIs for internal experimentation.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- Oracle Certified Professional: Java SE 11 Developer
- AWS Certified Developer – Associate
- Google Cloud Digital Leader
- Certified Kubernetes Application Developer (CKAD)
- Scrum.org Professional Scrum Developer (PSD I)

PROJECTS

➤ **Telekom Cloud Migration Framework**

Led design and implementation of reusable Spring Boot microservices for a telecommunications client's private-to-public cloud migration using AWS, Docker, and Kubernetes. Enabled 50% faster deployment cycles and cost savings by automating environment provisioning and configuration management.

➤ **Distributed Alerting System for IoT Devices**

Built a distributed backend for real-time event monitoring of connected devices using Java, Kafka, MongoDB, and AWS Lambda. Provided scalable alert processing and reduced false positives via ML-based filters.

➤ **Banking App Modernization**

Migrated legacy banking workflows to React + Spring Boot microservices, integrated Grafana dashboards and Prometheus metrics, ensuring 99.99% uptime and ISO-compliant audit logging on AWS/GCP hybrid architecture.
