

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Dedicated and pragmatic software engineer with 8+ years of experience building scalable, event-driven, and fault-tolerant backend systems. Specialized in functional programming (Elixir, Erlang), real-time systems with Phoenix LiveView, and CI/CD workflows across microservices architectures. Passionate about clean code, observability, and pushing performance boundaries in distributed systems.

TECHNICAL SKILLS

- **Languages:** Elixir, Erlang, TypeScript, JavaScript, Python, HTML5, CSS3
- **Frameworks:** Phoenix, Phoenix LiveView, React, Node.js, Express
- **Backend:** Kafka, RabbitMQ, PostgreSQL, Redis, MongoDB
- **DevOps:** Docker, Kubernetes, GitHub Actions, CircleCI, GitLab CI/CD
- **Cloud & Infra:** AWS (ECS, S3, Lambda), GCP, Nginx, Traefik
- **Architectures:** Microservices, Event-driven, CQRS, Pub/Sub
- **Tools:** Grafana, Prometheus, Datadog, Sentry, Git, Webpack, VS Code

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Spearheaded design and optimization of microservices using functional paradigms in Elixir and Phoenix, significantly improving service resilience and latency across distributed components.
- Led transition from monolithic backend to event-driven microservices, integrating Apache Kafka for real-time communication between core domains.
- Mentored junior developers on LiveView and GenServer patterns, elevating the team's Elixir proficiency and streamlining front-to-back feature delivery.
- Deployed scalable applications on Kubernetes with Docker containers, enabling rapid CI/CD pipelines and blue/green production releases.
- Designed high-throughput APIs with Phoenix that handled concurrent user traffic and ensured data consistency through PostgreSQL transactional queries.
- Implemented system observability using Prometheus and Grafana for latency tracking and error alerting across service mesh.
- Collaborated with product and QA to refine sprint deliverables and resolve edge-case bugs via test-driven development and property-based testing.

- Coordinated migration of legacy REST endpoints into Elixir services with GraphQL wrappers, boosting frontend integration and developer experience.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built and maintained event-processing engines leveraging RabbitMQ and Elixir for marketing automation and customer analytics applications.
- Created custom Phoenix contexts with tightly coupled Ecto schemas to model real-world campaign behavior, reducing edge-case bugs by over 30%.
- Delivered business-critical features for CRM systems, integrating PostgreSQL with Elixir's Ecto for high data fidelity and complex joins.
- Employed Docker Compose and Kubernetes Helm charts to orchestrate development, staging, and production environments across multi-node clusters.
- Collaborated on an internal admin dashboard built with LiveView, allowing live updates and role-based access control.
- Tuned PostgreSQL indexes and queries for performance on large data ingestion jobs with over 5M+ records per day.
- Worked closely with frontend engineers consuming Phoenix-generated GraphQL endpoints from React-based dashboards.
- Automated test suites using ExUnit and GitLab CI pipelines to ensure consistent deployments and fast regression detection.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed backend logic for an inventory management platform, using Erlang/OTP and Elixir for concurrent order handling and synchronization.
- Built real-time features using Phoenix Channels for notifications and inventory alerts across warehouse terminals.
- Created background job systems for data synchronization and external API polling, using Oban and GenStage pipelines.
- Developed containerized microservices using Docker and managed CI/CD with Jenkins and GitLab runners.
- Conducted load testing and profiling using Tsung to validate system scalability and recovery under stress.
- Built reusable React components and consumed backend APIs for reporting dashboards and live metrics visualization.
- Implemented OAuth2 and custom JWT-based authentication flows for secure login and session management.
- Maintained thorough documentation using Swagger and markdown-based internal wikis to onboard new engineers.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed internal tools for financial reporting using Elixir and EEx templating for exportable HTML and PDF formats.

- Integrated PostgreSQL databases with time-series indexing and implemented bulk inserts with conflict resolution.
- Used Phoenix and Webpack for modular SPA serving internal stakeholders and real-time data streams.
- Collaborated cross-functionally with Estonian business stakeholders to rapidly iterate on government-compliance reporting forms.
- Wrote shell scripts to support infrastructure automation and backups on AWS EC2 and RDS instances.
- Participated in daily standups, sprint retrospectives, and sprint planning as part of a highly agile environment.
- Handled security hardening for internal admin tools using content security policies and access audits.
- Supported QA with automated browser tests using Hound and Elixir test factories for UI flows.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in building web-based workflow tools with Elixir and Phoenix Framework under mentorship of senior engineers.
- Wrote unit tests and backend scripts to automate processing of internal metadata and customer logs.
- Implemented PostgreSQL migration scripts and seeded dev environments with realistic test data.
- Developed early versions of business rules engines with pattern matching and recursion strategies.
- Learned fundamentals of fault-tolerant architecture using Erlang principles and OTP constructs.
- Participated in pair programming sessions and received feedback on functional coding practices.
- Created internal CLI utilities for developers using Elixir's `OptionParser` and `Task.async_stream`.
- Contributed documentation to onboarding guides and internal engineering handbook.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Certified Elixir Developer – Code BEAM Europe (2023)
- ❖ Advanced Functional Programming in Elixir – Pragmatic Studio (2022)
- ❖ Kubernetes Application Developer (CKAD) – CNCF (2021)
- ❖ PostgreSQL Performance Tuning – EDB (2020)

PROJECTS

- ✓ **Elixir Event Bus System**
Designed a scalable event-bus using GenStage and Kafka to power real-time analytics pipelines for CRM interactions.

✓ **LiveOps Admin Panel (LiveView)**

Developed a fully reactive admin panel using Phoenix LiveView and PostgreSQL to manage thousands of concurrent user sessions and system configurations.

✓ **Phoenix+Kafka Integration Library**

Contributed to open-source Kafka adapter for Phoenix-based services, enabling structured pub/sub flows for Elixir services.
