

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Skilled Software Engineer with over 6 years of experience building secure, scalable, and interactive web applications. Strong backend expertise in **Python 3** and **FastAPI**, paired with advanced frontend development using **React** and modern frameworks like **Remix** and **Next.js**. Passionate about cybersecurity, with experience aligning software features with **EU regulations** such as **CRA** and **NIS2**. Adept in integrating **LLMs** and leveraging AI tools to enhance user functionality and product intelligence. Excels in startup environments, delivering end-to-end features within agile teams.

TECHNICAL SKILLS

- **Languages:** Python 3, JavaScript (ES6+), TypeScript, SQL, HTML/CSS
- **Frameworks/Libraries:** FastAPI, Next.js, Remix.js, React, D3.js, Three.js
- **AI/ML:** OpenAI APIs, LangChain, vector databases (e.g., Pinecone, Weaviate)
- **DevOps:** Docker, GitLab CI/CD, Git, JIRA, Confluence
- **Databases:** PostgreSQL, MongoDB, Neo4j
- **Tools:** GitLab Copilot, Cursor, RooCode, VS Code, Postman
- **Cloud:** AWS (EC2, Lambda), Azure

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and developed robust REST APIs using Python 3 and FastAPI, optimizing for performance, security, and scalability across high-throughput microservices.
- Led the frontend integration using React and Next.js, implementing interactive user interfaces and integrating LLM-driven features with contextual auto-suggestions.
- Integrated dynamic 2D and 3D data visualizations into admin dashboards using D3.js and Three.js to display complex relationships in real-time.
- Orchestrated Dockerized environments across development, staging, and production with GitLab CI/CD pipelines for rapid, reliable deployments.
- Implemented AI-driven features leveraging OpenAI and LangChain to automate documentation summaries and user input predictions across forms.
- Refined application security posture by introducing input sanitization, API rate-limiting, and token-based authentication in line with EU cybersecurity practices.
- Collaborated with product and design teams to define architecture for AI-enhanced modules that integrated external threat feeds and visual anomaly alerts.

- Mentored junior developers and introduced Copilot-powered workflows and internal code review automation tools to accelerate team productivity.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built RESTful services using Python with Flask and transitioned the codebase to FastAPI, reducing response times and simplifying validation logic.
- Developed high-performance frontend interfaces using React and Remix.js, enabling modular page transitions and real-time content previews.
- Created responsive visual components for analytics dashboards using D3.js, allowing users to interactively explore user engagement metrics.
- Integrated OpenAI's GPT-3 API to generate personalized content suggestions in digital campaigns, significantly improving conversion rates.
- Applied Docker-based development workflows and ensured environment parity using Compose across local and CI environments.
- Conducted in-depth threat modeling of data flows in digital campaign tools, helping the business align with NIS2 requirements.
- Contributed to the creation of a custom internal CMS with advanced permissioning and session auditing, aligning with cybersecurity best practices.
- Supported QA and deployment teams in automating test pipelines using GitLab runners and integrating error-reporting dashboards.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed backend services using Python and Django, optimizing ORM queries and integrating PostgreSQL with full-text search capabilities.
- Transitioned legacy UIs to React, implementing reusable components and integrating real-time data updates via WebSocket channels.
- Contributed to the implementation of graph visualization modules using D3.js to depict network relationships and data lineage.
- Created modular Docker environments that facilitated reproducible local development and automated end-to-end testing.
- Coordinated with security specialists to implement encrypted data transfer pipelines for sensitive customer records.
- Introduced automated CI workflows with GitLab CI/CD for consistent testing, linting, and deployment to staging environments.
- Authored internal documentation templates enhanced with AI-generated explanations for junior onboarding via Copilot.
- Collaborated with UI/UX designers to create interactive graphs for user navigation heatmaps using React and Three.js.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Implemented backend APIs in Python to support internal admin tools, later enhanced with FastAPI for improved developer experience.
- Built dynamic React-based interfaces using Redux and modular design patterns for state management and reusable UI components.
- Created backend logging utilities for monitoring user behavior, feeding into interactive analytics dashboards.
- Deployed Docker containers to AWS EC2 instances, configuring custom AMIs and automating environment setup.
- Participated in agile sprint planning and code reviews, focusing on optimizing web application response times.
- Integrated with third-party APIs for geolocation and secure data fetching using asynchronous job queues.
- Led internal workshops to introduce unit testing frameworks and best practices for test coverage improvement.
- Worked closely with designers to align component libraries with mobile-first principles and accessibility standards.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Assisted in building Python-based scripts for log processing and automated report generation for cybersecurity alerts.
- Supported development of frontend features using vanilla JavaScript and jQuery, later migrated to React prototypes.
- Participated in developing internal tools that visualized data pipelines and user sessions using D3.js charts.
- Helped containerize legacy applications and improve consistency in builds using Docker and shell automation scripts.
- Conducted performance benchmarks on REST endpoints and proposed schema optimizations in PostgreSQL.
- Integrated basic AI features by calling early LLM APIs to analyze log patterns and detect anomalies.
- Supported team efforts in migrating on-prem infrastructure toward containerized, modular solutions.
- Created internal wikis and tutorials for automating project setup using Git, Docker, and Python virtual environments.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AI-Powered Developer Tools: Copilot, Cursor, & Beyond** – DevTool Academy, 2024
- ❖ **FastAPI Advanced Development** – Udemy, 2023
- ❖ **Graph and Vector Databases for Developers** – Neo4j + Pinecone Labs, 2023
- ❖ **Introduction to Cybersecurity Tools & Cyber Attacks** – Coursera (IBM), 2022

PROJECTS

- ✓ **CRA-AI Compliance Dashboard (Concept)**
Built a full-stack prototype platform simulating CRA-AI requirements. Backend in FastAPI, frontend in React/Remix, 2D graphs with D3.js showing threat surfaces. LLM integration suggests remediation actions based on anomaly types.
- ✓ **GraphSec Visualizer**
Python + React + Three.js app to visualize security threats and network relationships in 3D. Integrated GPT-4 for real-time vulnerability explanation.
- ✓ **AI Issue Triage System**
Integrated OpenAI API with GitLab issues to auto-tag, summarize, and route bugs and features using embeddings stored in a vector database (Weaviate).
