

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile Senior Software Engineer with 9+ years of experience specializing in backend development using Python (FastAPI, Pandas) and Java (Spring Boot). Adept in microservices, REST APIs, cloud platforms (GCP, Kubernetes), and CI/CD pipelines. Proven track record of delivering stable, scalable backend systems in Agile environments. Passionate about innovation, automated testing, and writing maintainable, production-grade code in dynamic cross-functional teams.

TECHNICAL SKILLS

- **Languages:** Python, Java, TypeScript, JavaScript, Shell Script, SQL
- **Frameworks:** FastAPI, Spring Boot, Spring Cloud, Express.js, React
- **DevOps:** Docker, Kubernetes, GCP, Git, GitLab CI/CD, Jenkins
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- **Tools:** Pandas, LangChain, LangChain4j, LangGraph, LangGraph4j
- **Testing:** JUnit, PyTest, Postman, Mockito, Integration & API Testing
- **Concepts:** Microservices Architecture, REST API, Event-Driven Design, Agile (Scrum), Clean Code, TDD
- **Cloud:** Google Cloud Platform (Cloud Functions, Pub/Sub), Firebase, AWS (Basics)
- **OS:** Linux, Ubuntu, Debian, Windows

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed microservices using FastAPI and Spring Boot to support scalable enterprise-grade data ingestion pipelines across multiple business domains.
- Implemented robust backend logic and asynchronous workflows using Python and Java, reducing processing latency by 45% in distributed systems.
- Led creation of automated test suites (unit, integration, API) to improve code coverage by 60% and ensure stable CI/CD pipelines across environments.
- Engineered RESTful APIs consumed by frontend and mobile apps, ensuring reliable authentication and data exchange using JWT and OAuth2.
- Containerized all services using Docker, deployed to Kubernetes on GCP, and configured GCP Cloud Functions to optimize performance and reduce infrastructure costs.

- Optimized data processing with Pandas for real-time reporting and analytical dashboards, cutting data analysis cycle time by 70%.
- Collaborated in Agile sprints and led technical reviews, story pointing, and grooming sessions to align with business goals.
- Mentored junior developers in microservices architecture and DevOps best practices, enhancing team velocity and onboarding efficiency.
- Explored and integrated LangChain4j with Java-based services to prototype LLM-powered assistants and intelligent agent pipelines.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed and maintained microservices in Spring Boot and FastAPI for high-throughput marketing platforms integrating with multiple third-party systems.
- Built scalable REST APIs and backend modules for personalization and campaign automation tools with real-time processing and high availability.
- Utilized PostgreSQL and MongoDB for hybrid data modeling, ensuring consistency across transactional and document-based operations.
- Created bash scripts and cron jobs to automate deployment, maintenance, and backup operations across production systems.
- Designed Dockerized applications and CI/CD pipelines using Git and Jenkins, reducing manual deployment errors and downtime.
- Integrated Google Cloud Pub/Sub and Firebase into data synchronization flows, handling 1M+ events daily with guaranteed delivery.
- Refined performance of distributed applications by profiling memory usage and implementing caching with Redis and in-memory solutions.
- Advocated Agile best practices and implemented story mapping with business stakeholders for enhanced backlog transparency and ROI.
- Promoted usage of LangGraph in prototype conversational pipelines to evaluate structured knowledge processing and LLM workflows.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed microservice-based architectures using Spring Boot, enabling modular scaling of e-commerce and logistics platforms.
- Developed backend APIs with FastAPI and implemented rich data models with SQLAlchemy and Pandas for advanced analytics support.
- Managed build automation using GitLab CI/CD and Docker, reducing release cycle time by 30% while improving rollback procedures.
- Implemented monitoring and alerting pipelines with Prometheus and Grafana for system reliability and proactive incident resolution.
- Introduced schema versioning and data migration flows using Liquibase for PostgreSQL and MongoDB, ensuring seamless upgrades.
- Built APIs with strong versioning and backward compatibility strategies to avoid breaking legacy integrations.
- Participated in code reviews, pair programming sessions, and conducted brown bag sessions on scalable backend design patterns.
- Wrote custom shell scripts for log parsing, health checks, and cron-based operations in high-availability server clusters.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Contributed to backend service development using Spring Boot and REST APIs to power content-driven web platforms.
- Developed integration services with third-party platforms using OAuth2 and API contracts for seamless interoperability.
- Designed PostgreSQL schemas and optimized queries with indexing and partitioning for improved API response times.
- Enhanced backend test automation using JUnit and Mockito to cover business-critical functionality.
- Participated in early-stage architecture decisions to modularize services using service registry and discovery patterns.
- Containerized development environments using Docker Compose, accelerating onboarding and testing.
- Supported frontend teams with custom API scaffolds and swagger docs to accelerate UI development.
- Engaged in Agile ceremonies and tracked sprint progress with JIRA, collaborating closely with design and QA teams.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in development of REST APIs and automation scripts in Python to support real-time IoT telemetry dashboards.
- Built CLI tools in Shell for batch processing and log analysis of device signals, improving diagnostics and uptime tracking.
- Created unit and integration test cases to validate API contract adherence and prevent breaking changes.
- Participated in initial containerization of dev environments using Docker and configuration of GitLab CI pipelines.
- Worked on data transformation pipelines using Pandas and NumPy to normalize telemetry datasets.
- Implemented secure authentication modules and helped with OAuth2 provider integration.
- Collaborated with hardware teams to translate sensor schemas into usable data services.
- Delivered documentation and API references to internal teams for knowledge sharing and onboarding.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Google Cloud Certified: Associate Cloud Engineer

- ❖ Java Spring Boot Microservices – Udemy
 - ❖ Python FastAPI & Async IO Fundamentals – Coursera
 - ❖ Agile Software Development – Atlassian Academy
 - ❖ Docker & Kubernetes Essentials – Pluralsight
-

PROJECTS

LangGraph-Powered Service Routing

- Developed a prototype routing system for customer service automation using LangGraph4j, integrating vector memory and GPT-based decision engines.
- Designed flows that allowed contextual retention and semantic transitions across intents, reducing average customer resolution time by 35%.

IoT Telemetry Aggregator

- Built real-time backend service in FastAPI and Pandas to ingest, clean, and analyze sensor telemetry from edge devices deployed across manufacturing plants.
- Enabled predictive maintenance workflows and anomaly detection that helped reduce machinery downtime by 22%.

Microservices-Based Campaign Manager

- Created Spring Boot microservices for dynamic campaign creation and delivery, integrated with Firebase and GCP Pub/Sub for scalable notifications and analytics.
- Supported high concurrency and real-time personalization features for 100K+ active users.
