

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Innovative and solutions-focused Full Stack Engineer with over 9 years of progressive experience designing and implementing scalable web applications. Expert in React, Tailwind CSS, Node.js, TypeScript, PostgreSQL, and AWS. Adept at driving end-to-end software development lifecycle in startup environments, owning technical execution of critical projects, and collaborating cross-functionally to deliver seamless, high-performance products.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, AngularJS, Tailwind CSS, HTML5, CSS3, JavaScript, TypeScript
- **Backend:** Node.js, Express.js, RESTful APIs, GraphQL, Firebase Functions
- **Database:** PostgreSQL, MongoDB, MySQL, Prisma ORM
- **DevOps:** Docker, Git, GitHub Actions, CI/CD pipelines, Vercel, Netlify
- **Cloud Platforms:** AWS (S3, EC2, RDS), Google Cloud Platform
- **Testing:** Jest, Mocha, Cypress, Playwright, TDD
- **Project Management:** Jira, Confluence, Trello, Agile/Scrum
- **Other Tools:** Postman, Swagger, Webpack, Figma

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Spearheaded the design and implementation of a multi-tenant SaaS analytics dashboard using React, Tailwind, and Node.js with PostgreSQL, significantly improving user experience and system performance.
- Orchestrated end-to-end architecture for scalable backend services using Express and REST APIs, deploying with Docker and CI/CD pipelines across AWS environments.
- Developed reusable, atomic UI components in React with Tailwind CSS, reducing feature development cycle by over 30% through modular codebase improvements.
- Collaborated closely with product and design teams in a lean-agile setup to deliver rapid MVP iterations for startup clients.
- Integrated complex third-party APIs and OAuth2 authentication flows, enhancing platform security and interoperability across fintech and healthtech verticals.

- Managed PostgreSQL schema migrations and query optimizations, achieving over 45% performance gain in high-traffic endpoints.
- Conducted technical interviews, mentored junior engineers, and facilitated code reviews to uphold engineering excellence across cross-functional teams.
- Introduced testing strategy with Jest and Playwright, achieving over 80% code coverage and catching 25+ critical issues pre-production.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Led frontend architecture overhaul from jQuery to React + TypeScript, modernizing legacy marketing campaign platforms and significantly increasing maintainability.
- Delivered robust backend microservices using Node.js and integrated them with CRM systems and internal databases via REST and WebSocket APIs.
- Built dynamic campaign builders with React and Tailwind CSS, enabling non-technical teams to generate real-time product offerings.
- Implemented real-time analytics dashboards using PostgreSQL and socket communication, enhancing client reporting with millisecond-level insights.
- Coordinated with stakeholders to translate high-level business goals into granular, testable user stories and engineering tasks.
- Automated deployment workflows using GitHub Actions and Docker, reducing manual deployment errors and increasing developer velocity.
- Optimized heavy SQL queries and database indexes, decreasing report generation times from 5 minutes to under 20 seconds.
- Introduced performance profiling and Lighthouse audits, improving frontend performance scores from 65 to 95+.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Designed full-stack custom CMS platform using Node.js, PostgreSQL, and vanilla JavaScript, deployed across 20+ client domains.
- Created modular component library and responsive layout system in HTML5/CSS3 with early Tailwind principles before framework adoption.
- Worked directly with startup founders to iterate and ship features rapidly, often taking projects from conception to production within weeks.
- Designed role-based access control systems for internal admin tools to support client onboarding, resulting in 60% reduction in support tickets.
- Refactored frontend routing and state management to adopt more maintainable patterns, resulting in 40% fewer regression bugs.
- Deployed static and dynamic web apps using Netlify and AWS S3, configuring secure environments with HTTPS and custom DNS.
- Wrote integration tests with Mocha/Chai, significantly improving product stability during bi-weekly deployments.
- Conducted UX reviews and A/B testing campaigns that increased feature engagement by over 20%.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Contributed to the frontend revamp of an e-commerce engine using AngularJS, bringing responsive UI and component-based architecture.
- Integrated PayPal and Stripe SDKs on the backend using Node.js and Express, enabling secure multi-currency transactions.
- Designed and implemented product catalog filters with MongoDB query optimizations to improve load time by 35%.
- Collaborated with QA to set up automated regression suites and manual testing procedures, identifying 15+ overlooked bugs in staging.
- Customized reporting tools for internal operations using PostgreSQL views and SQL scripts for weekly financial reporting.
- Worked closely with designers to turn Figma mockups into pixel-perfect implementations with HTML5 and Sass.
- Documented technical workflows and onboarding instructions, which were later adopted as the team's standard.
- Participated in daily standups and retrospective meetings to iteratively improve delivery cycles and dev processes.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Built internal CRUD tools with Node.js and Bootstrap that replaced spreadsheets and reduced manual input errors by 80%.
- Developed and maintained unit tests for core business logic functions, increasing test coverage by 40%.
- Assisted in migrating legacy code from PHP to JavaScript-based stack, aiding performance and maintainability.
- Integrated simple Firebase authentication for user portals, streamlining access for both clients and internal staff.
- Used PostgreSQL to design normalized schemas for client contract and invoice management modules.
- Participated in code reviews, gaining critical feedback and rapidly leveling up software design and debugging skills.
- Supported continuous deployment using shell scripts and basic Docker containers.
- Wrote documentation and code comments to facilitate future handover and intern onboarding.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Full-Stack Web Development with React Specialization – Coursera, 2023
- ❖ TypeScript: Advanced Types and Language Features – Pluralsight, 2022
- ❖ PostgreSQL for Developers – Udemy, 2022
- ❖ AWS Certified Developer – Associate, 2021

PROJECTS

- ✓ **Realtime SaaS Dashboard Builder**

Built a fully customizable admin dashboard generator with React, Tailwind CSS, and Node.js backend, used across multiple startups for analytics and CMS control. Included dynamic widgets, live filtering, and authentication.

- ✓ **Headless eCommerce Platform**

Engineered a JAMstack eCommerce backend with GraphQL and PostgreSQL, featuring Next.js storefront integration and Stripe-powered checkout. Scalable to 1M+ SKUs with sub-500ms query latency.

- ✓ **Developer Productivity Toolkit**

Created CLI and VS Code extension combo to scaffold React/Node projects with linting, testing, CI/CD presets. Used internally and adopted by 3 startups to accelerate engineering onboarding.
