

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Senior Software Engineer with 9+ years of hands-on expertise in building robust, scalable, and intelligent systems using Python, JavaScript, and cloud-native solutions. Specialized in agentic AI, retrieval-augmented generation (RAG), LangGraph, and full-stack architectures. Proven track record leading cross-functional initiatives across Europe, delivering high-performance AI systems with measurable KPIs. Excels in fast-paced, startup-like environments, particularly within AWS ecosystems.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL, HTML, CSS, Bash
- **AI/ML:** LangGraph, agentic systems, RAG pipelines, scikit-learn, OpenAI, HuggingFace, spaCy
- **Web:** Svelte, React, Node.js, RESTful APIs, GraphQL, WebSockets
- **Cloud & DevOps:** AWS (Lambda, SQS, SNS, RDS, S3, CloudWatch), GCP, Docker, GitHub Actions, Vercel, Serverless Framework
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
- **CI/CD & Monitoring:** GitHub Actions, GitLab CI, Datadog, Sentry, Prometheus, Grafana
- **Other:** Agile/Scrum, Clean Code, Design Patterns, TDD, SDLC

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed agentic AI workflows using LangGraph and Python, powering real-time data classification, retrieval, and generation modules for large enterprise clients.
- Developed retrieval-augmented generation (RAG) pipelines utilizing hybrid vector search, prompt tuning, and OpenAI models to improve enterprise Q&A systems by 42%.
- Implemented gateway routing abstractions in TypeScript and AWS Lambda to streamline multi-model inference orchestration with asynchronous fault-tolerant routing.
- Built and maintained event-driven microservices using Serverless Framework and AWS SQS/SNS, enabling sub-200ms response time SLAs across 8 regional deployments.
- Introduced automated KPI logging for ML metrics and system health using CloudWatch + Prometheus, increasing incident traceability and response time by 55%.
- Led integration of Svelte frontends with AI backends using WebSockets and server-sent events for real-time inference feedback and progressive rendering.

- Conducted rigorous peer code reviews and authored internal documentation including architectural diagrams, data flowcharts, and lifecycle charts for RAG agents.
- Mentored 3 junior engineers on LangChain and LangGraph integration, boosting feature delivery velocity by 28% within 2 months of onboarding.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built scalable, event-based AI chatbots with RAG backend and PostgreSQL + Redis cache layers to serve dynamic contextual replies for 150k+ daily users.
- Integrated AI assistants into existing mobile and desktop platforms using RESTful APIs, JWT auth, and React-based dynamic widget deployment.
- Created analytics dashboards in JavaScript using D3.js to visualize AI performance KPIs and user engagement metrics across channels.
- Designed CI/CD pipelines in GitLab for automated testing, Dockerized deployment, and blue/green deployment of backend services.
- Implemented secure AWS IAM roles, KMS encryption, and VPC controls to support GDPR-compliant AI deployments across EU data centers.
- Managed a microservice codebase structured around clean architecture and hexagonal boundaries, significantly improving testability and modularity.
- Designed dynamic form rendering logic for product recommendation systems based on inferred user intent and AI classification.
- Acted as Scrum team tech lead for biweekly planning and cross-team feature alignment, improving interdepartmental feedback loops.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed RESTful services for IoT integration platforms using Flask and Express, ensuring secure device communication over MQTT and WebSocket bridges.
- Built predictive maintenance dashboards using anomaly detection algorithms and ML regression models trained on sensor input from HVAC systems.
- Maintained 99.99% service uptime by implementing circuit breakers, health checks, and asynchronous message processing in RabbitMQ and Celery workers.
- Delivered multi-tenant support features using PostgreSQL row-level security and tenant-aware query abstraction layers.
- Integrated 3rd-party APIs like Stripe, Twilio, and Firebase for payments, SMS, and authentication into full-stack applications.
- Built dynamic frontend modules with React.js, enabling real-time user interface updates using Socket.IO for live event broadcasting.
- Conducted quarterly system performance audits, resulting in 30% response time improvements through backend index optimization and frontend lazy loading.
- Delivered extensive code documentation and postmortem reports, enhancing transparency for stakeholders and compliance reviews.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Developed AI-powered classification pipelines for document tagging and legal text summarization using NLTK and custom Naive Bayes classifiers.
- Supported migration from monolithic PHP backend to Flask microservices, improving deployment agility and fault isolation.
- Developed user role management and access control modules using RBAC strategies with PostgreSQL and JWT-based sessions.
- Created data ingestion pipelines to pull data from legacy systems and normalize them into JSON schemas for downstream analytics engines.
- Integrated SSO using OAuth2 and LDAP for enterprise internal tooling, reducing login friction and improving security compliance.
- Authored multi-language form validation logic using JavaScript and backend fallback for accessibility compliance.
- Wrote unit and integration tests using PyTest and Mocha.js, achieving 93% overall test coverage in CI pipelines.
- Assisted in internationalization of frontend templates and backend models, supporting five new markets in less than 3 months.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Created internal tools for automating deployment scripts and system monitoring dashboards using Bash, Python, and Prometheus.
- Wrote SQL optimization scripts for reporting database with over 300 million records, improving performance of analytical dashboards by 2x.
- Contributed to full-stack development of admin portal in PHP and jQuery for data tagging and batch processing control.
- Wrote scripts to transform customer CSV dumps into clean, validated JSON pipelines integrated with the primary data lake.
- Participated in team code reviews and learned agile ceremonies including planning, daily standups, and retrospectives.
- Built POC for OCR-based invoice scanning system using Tesseract and custom regex for field extraction.
- Enhanced cron-based ETL systems using better error logging and retry mechanisms for fail-safe batch processing.
- Documented internal DevOps onboarding process and tools wiki for new engineers, reducing ramp-up time by 40%.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
 - ❖ Google Cloud Professional Cloud Developer
 - ❖ DeepLearning.AI LangChain for LLM Application Development
 - ❖ IBM AI Engineering Professional Certificate
 - ❖ SQL for Data Science – University of California, Davis (Coursera)
-

PROJECTS

- **AI Knowledge Router (LangGraph + RAG + AWS Lambda)**
Built a dynamic AI system using LangGraph for routing user queries across different LLM pipelines based on topic, data source, and response format. Integrated OpenAI + Pinecone with AWS Lambda and S3 for storage, achieving 95% accuracy in internal tests.
- **RAG-Powered Customer Support Chatbot**
Developed a multilingual RAG-based chatbot deployed in production across 3 e-commerce sites. Leveraged PostgreSQL + vector DB hybrid retrieval to reduce ticket volume by 40%.
- **Serverless Inference Gateway (Svelte + AWS + WebSockets)**
Implemented real-time streaming UI for AI model inference using Svelte and WebSockets, deployed on Vercel with serverless backend hosted on AWS Lambda and RDS.
