PROFESSIONAL SUMMARY

Seasoned backend engineer with 8+ years of experience designing and implementing scalable, production-grade systems using Go (Golang), Python, and distributed technologies. Proven expertise in architecting microservices, building streaming pipelines, and delivering backend infrastructure in cloud-native environments (AWS, GCP). Strong advocate for clean code, performance optimization, and asynchronous communication via Kafka and Protobufs. Hands-on with SQL/NoSQL databases, GraphQL APIs, and infrastructure automation. Excels in startup environments that value ownership, speed, and engineering excellence.

TECHNICAL SKILLS

- **Languages & Frameworks:** Golang, Python, C++, TypeScript, SQL, Scala (basic), Node.js
- **Distributed Systems:** Kafka, AWS Kinesis, Protobuf, gRPC, REST, GraphQL
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
- **DevOps & Tools:** AWS (EC2, Lambda, SQS, SNS, RDS), Docker, GitHub Actions, Terraform, Jenkins
- **Testing & QA:** Unit Testing, Integration Testing, Test Containers, TDD
- **Other:** Clean Architecture, Microservices, Event-Driven Architecture, Agile/Scrum

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented microservices using Go with a strong emphasis on concurrency, fault tolerance, and distributed message handling through Kafka and AWS SQS.
- Built scalable REST and GraphQL APIs for internal tools and customer-facing services, leveraging GORM and sqlx to interact with PostgreSQL and DynamoDB for persistent data.
- Led the migration of a legacy monolithic Python service to microservices architecture using Go, reducing deployment times by 40% and improving developer efficiency.
- Implemented Protobuf and gRPC for inter-service communication, ensuring compatibility and version safety across multiple internal services.
- Developed custom stream processing workflows using AWS Kinesis and Kafka to handle real-time telemetry data with throughput exceeding 500K messages/hour.

- Collaborated with DevOps to containerize services using Docker and orchestrated deployments with GitHub Actions and Terraform on AWS.
- Conducted architectural reviews and mentored junior developers on Go idioms, testing strategies, and performance best practices.
- Integrated metrics collection via Prometheus and Grafana, enabling visibility into system health and cutting mean time to resolution by 35%.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed backend services in Go and Node.js supporting campaign automation, user tracking, and analytics across several high-traffic marketing platforms.
- Designed asynchronous pipelines using Kafka and Redis to handle campaign events in real-time with guaranteed delivery and at-least-once processing semantics.
- Built complex SQL queries and database views to support advanced targeting and segmentation features for marketing users.
- Participated in cross-team code reviews and introduced consistent coding guidelines and performance benchmarks across backend services.
- Created RESTful APIs consumed by internal admin dashboards and external client apps, supporting over 1M daily requests.
- Contributed to secure authentication middleware using JWT and OAuth2 flows for B2B and B2C applications.
- Optimized critical Go routines through profiling tools like pprof and improved handler latency by up to 50% in key services.
- Maintained CI/CD pipelines using Jenkins and Docker to ensure seamless integration and delivery of code to multiple environments.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Engineered backend features using Go, focusing on inventory tracking, order processing, and invoice management within a modular ERP system.
- Introduced background task workers using Go channels and goroutines to offload processing of time-consuming reports and PDF generations.
- Integrated third-party APIs for payments, invoicing, and delivery services into customer-facing platforms, improving operational efficiency.
- Utilized PostgreSQL triggers and stored procedures to maintain data consistency in complex workflows across multiple services.
- Built event-driven notification systems using AWS SNS/SQS for email, SMS, and app push updates.
- Contributed to service observability by integrating centralized logging with Elastic Stack and structured logging in Go.
- Collaborated with front-end teams to define GraphQL schemas and resolvers using Go backends and React frontends.
- Implemented database schema versioning and rollback strategies using golang-migrate for production-grade deployments.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Participated in development of data integration tools using Go and C++ to connect legacy accounting systems with modern cloud platforms.
- Wrote parsers for CSV/XML/JSON inputs and automated data validation rules to ensure data cleanliness and system reliability.
- Designed an internal SDK in Go to simplify integration with various ERP APIs used across client deployments.
- Assisted with deployment automation scripts using Bash and Docker to enable fast testing and rollbacks in staging.
- Contributed to REST API development with Go's net/http and Gorilla Mux for configuration tools and data pipelines.
- Designed test plans and implemented unit tests to ensure stability across frequent client-specific customizations.
- Collaborated with clients to understand technical integration needs and delivered tailored backend modules with short turnaround times.
- Improved error handling across Go services with custom error types and structured logging for better debugging.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in implementing RESTful APIs in Go to support an internal employee management system used across multiple offices.
- Developed CLI tools in Go to automate reporting tasks and CSV data synchronization across departments.
- Refactored legacy PHP code to Go, improving performance and maintainability of critical workflows.
- Helped design and maintain a MySQL schema and built queries for user permissions and access control logic.
- Wrote comprehensive documentation for internal libraries and tools, aiding onboarding and faster debugging.
- Worked closely with senior engineers to fix bugs, test edge cases, and provide continuous improvement suggestions.
- Participated in agile sprint planning and contributed to team demos and retrospectives.
- Conducted research on Go's memory management and garbage collection to propose optimizations for long-running services.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Developer – Associate (2023)
 - Kafka Streams and ksqlDB Developer by Confluent (2022)
 - Go (Golang): The Complete Developer's Guide – Udemy (2023)
 - Data Engineering with AWS – Coursera (2024)
-

PROJECTS

- **Real-Time Telemetry Pipeline with Go + Kafka + AWS Kinesis**
Developed a highly scalable data ingestion and processing pipeline using Kafka and AWS Kinesis to process IoT sensor streams, converting raw signals into actionable analytics.
- **Distributed GraphQL Gateway in Go**
Built a GraphQL gateway in Go aggregating APIs from multiple microservices with custom authentication and caching logic using Redis, improving response times by 60%.
- **Automated Cloud Cost Tracker**
Created a cost-tracking microservice in Go that aggregates AWS billing data daily and sends Slack alerts for usage spikes or anomalies, integrated with Prometheus and Grafana for dashboards.
