

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 8+ years of backend development experience, specializing in Golang, cloud-native systems on AWS, and NoSQL data modeling with MongoDB. Proven track record of designing and deploying robust, distributed services for high-traffic applications. Adept at working in remote-first environments, collaborating across time zones, and building scalable infrastructure using Kubernetes. Passionate about delivering production-grade APIs, maintaining clean architectures, and mentoring engineering teams through high-impact projects.

TECHNICAL SKILLS

- **Languages:** Golang, JavaScript, TypeScript, Python, Bash
- **Databases:** MongoDB, PostgreSQL, Redis, MySQL
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Lambda, EKS), Docker, Kubernetes, Terraform, GitHub Actions, Jenkins
- **Architecture:** REST APIs, Microservices, Event-Driven Systems, Cloud-Native Design
- **Tools:** Grafana, Prometheus, Kibana, Git, Jira, VSCode, Postman
- **Other:** Agile/Scrum, TDD, CI/CD, System Monitoring, NoSQL modeling, Load Testing

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Engineered and maintained distributed microservices using Golang, powering backend logic for enterprise fintech and healthcare platforms across multiple markets.
- Designed MongoDB schemas optimized for querying large-scale transactional data, enabling performant search capabilities and document-level sharding in production.
- Deployed containerized services using Kubernetes on AWS EKS, automating Helm-based deployments and ensuring high availability under peak loads.
- Implemented secure RESTful APIs with JWT authentication and rate-limiting, supporting up to 10K concurrent user sessions with consistent 99.99% uptime.
- Established Terraform infrastructure for reproducible provisioning of EC2, RDS, and S3, reducing cloud onboarding time for new services by 50%.
- Integrated observability tools like Prometheus and Grafana for proactive monitoring of microservices, reducing downtime incidents through real-time alerts.

- Led code reviews, enforced consistent style guides, and mentored junior Golang engineers through architectural walkthroughs and pairing sessions.
- Participated in cross-functional sprint planning, delivering backend capabilities aligned with frontend and product goals across a globally distributed team.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed REST APIs and backend logic in Golang and Node.js to power interactive mobile marketing campaigns with real-time user analytics.
- Used MongoDB for storing campaign metadata and user interactions, enabling rapid data aggregation and reporting across marketing dashboards.
- Integrated AWS services including Lambda and S3 to streamline media uploads and event-driven workflows in promotional applications.
- Employed Docker-based containerization across dev, staging, and prod, ensuring consistent build and release pipelines across environments.
- Created reusable microservices for customer profiling, CRM sync, and campaign reporting, accelerating feature rollout across multiple clients.
- Collaborated with design and QA teams to ensure consistent API contracts and led defect triaging sessions during release sprints.
- Assisted with infrastructure refactor using Terraform, simplifying environment provisioning and reducing manual cloud configuration tasks.
- Engaged in daily standups and retrospectives to improve agile velocity, ensuring timely delivery of backend features and bug fixes.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built backend modules in Golang and Python for construction management tools, serving thousands of users across architectural projects.
- Designed MongoDB-based caching layer to reduce response times for heavy dashboard queries, improving client-side loading by 40%.
- Implemented OAuth2-based authentication and granular RBAC roles across internal admin tools and client portals.
- Supported AWS-hosted infrastructure through EC2 and S3 integration, optimizing cost through scheduled resource scaling.
- Developed CI/CD automation with Jenkins pipelines, cutting deployment times by 60% and reducing rollback efforts through versioned releases.
- Created CLI tools in Golang for internal file parsing and data sync across third-party ERP systems.
- Conducted peer reviews, implemented feature flags, and coordinated backend deployments with DevOps and QA.
- Contributed to planning and wireframing features by translating product specs into backend architecture and API schemas.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Delivered API endpoints in Go and Node.js for logistics dashboards, handling JSON serialization and integration with Firebase real-time services.
- Designed MongoDB indexes and aggregation queries for delivery status filtering and map-based route estimation features.
- Built backend features to support notifications and delivery event tracking using AWS SNS and cron-based jobs.
- Participated in codebase migration to Docker, enabling environment parity and consistent behavior across developer setups.
- Worked closely with frontend engineers to test endpoints using Postman and ensured seamless integration via OpenAPI documentation.
- Created RESTful routes with detailed error handling, improving API contract clarity and reducing integration bugs.
- Maintained test coverage by writing unit and integration tests using Jest and Mocha across backend modules.
- Managed Git workflows and coordinated releases with product stakeholders on a weekly cycle.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Supported development of internal admin panels using Go and Bootstrap-based templates, exposing secure APIs for admin workflows.
- Built basic backend services with MongoDB queries and pagination support for internal reporting modules.
- Assisted in migrating legacy endpoints from PHP to Node.js and Go, enhancing system reliability and scalability.
- Contributed to CLI scripts for internal tooling and cron jobs for daily backup and analytics processing.
- Wrote detailed technical documentation for service endpoints and logic flows, supporting developer onboarding.
- Attended architecture sessions and contributed ideas around caching layers and performance profiling.
- Used Git and GitLab for version control, merge request handling, and release tagging.
- Learned Agile methodologies by participating in daily scrums and sprint planning alongside senior developers.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **AWS Certified Developer – Associate** (2024)
 - ❖ **MongoDB for Developers – Advanced** (MongoDB University, 2023)
 - ❖ **Certified Kubernetes Application Developer (CKAD)** (2024)
 - ❖ **Golang Microservices Bootcamp – Udemy** (2023)
-

PROJECTS

- ✓ **Cloud-native Notification Microservice (Golang, AWS, MongoDB)**
Designed and deployed a scalable microservice that delivered transactional notifications via email and SMS using AWS Lambda, SES, and SNS, backed by a MongoDB event store.
- ✓ **Kubernetes Load Testing Framework (Go, K6, EKS)**
Built a framework in Golang that triggers distributed load tests via K6 pods on Kubernetes, providing detailed response metrics and error analysis through Prometheus-Grafana dashboards.
