

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Senior Software Developer with over 8 years of progressive expertise in backend engineering, with a strong emphasis on system-level programming using Go and C++. Proven record of designing scalable, high-performance microservices, optimizing database performance including caching and sharding, and integrating observability tools such as Prometheus, Grafana, and Loki. Adept at extending networking systems like Envoy and delivering solutions in cloud-native, distributed environments. Proficient in DevOps tools, CI/CD practices, and real-time event-driven architectures.

TECHNICAL SKILLS

- **Languages:** Go (Golang), C++, Python, TypeScript, JavaScript
- **Databases:** PostgreSQL, MySQL, ClickHouse, MongoDB, Redis, SQLite
- **DevOps & Tools:** GitLab CI/CD, Docker, Kubernetes, ArgoCD, Grafana, Prometheus, Tempo, Loki, Git
- **Architecture:** Microservices, Event-Driven Systems, REST APIs, gRPC, Envoy Extensions, WAL, Sharding, Caching Strategies
- **Cloud & Infrastructure:** AWS, GCP, Linux, Helm, Nginx, Terraform (basic)
- **Monitoring:** OpenTelemetry, Jaeger, Loki, Prometheus, Grafana
- **Others:** Agile, Jira, Confluence, Test-Driven Development (TDD), CI/CD, On-Call Support

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented high-performance Golang-based microservices for internal platforms, enabling concurrent user processing with real-time response under high-load conditions.
- Developed optimized caching layers using Redis and in-memory storage to reduce DB read latency by over 60%, improving API response times significantly.
- Architected and managed sharding logic for PostgreSQL databases to improve horizontal scalability and reduce bottlenecks in write-heavy scenarios.
- Implemented Envoy filters in C++ for custom L7 traffic management rules, ensuring security and control over internal service communication.
- Integrated observability tools including Prometheus, Loki, and Grafana, setting up actionable dashboards and alerts for early issue detection.
- Maintained a robust CI/CD pipeline using GitLab CI and ArgoCD, leading to more predictable deployments and reducing release regression issues by 40%.

- Led performance profiling of Go services using pprof and flame graphs, tuning garbage collection and improving memory efficiency.
- Participated in 24/7 on-call rotations, actively resolving production incidents, and writing root cause analysis to improve platform resilience.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Refactored core backend services to transition from monolithic Python applications to modular C++/Go microservices, improving deployment flexibility and scalability.
- Engineered reliable database indexing strategies and WAL (Write-Ahead Logging) configurations to ensure high transaction throughput and data durability.
- Built scalable REST and gRPC APIs integrated with distributed systems, handling over 1 million API calls daily with minimal latency.
- Designed and deployed real-time streaming solutions using NATS and Kafka for telemetry data ingestion and customer analytics processing.
- Collaborated with QA and DevOps to implement full TDD and CI/CD pipelines, reducing release cycle time by 50%.
- Configured and deployed Kubernetes workloads, integrating Helm charts for environment-specific deployments across staging and production.
- Delivered security-hardened services using OAuth2 and internal PKI, enhancing authentication mechanisms for critical APIs.
- Wrote technical documentation and system design blueprints in Confluence and led onboarding for new team members.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Built scalable backend APIs using C++ and embedded SQLite/PostgreSQL engines, handling inventory and user management systems.
- Designed data partitioning logic across distributed services and performed extensive benchmarking to identify optimal query plans.
- Conducted memory leak analysis and system profiling using Valgrind and gdb on production Linux deployments.
- Automated build processes using Docker and Git hooks, ensuring environment parity and faster local testing cycles.
- Developed real-time monitoring dashboards integrated with Prometheus exporters for legacy services.
- Maintained detailed software design documentation and test coverage reports to ensure high maintainability.
- Introduced API rate-limiting middleware to protect services against abuse and improve overall system reliability.
- Enhanced service resilience using retry patterns and circuit breakers integrated via Envoy proxy configuration.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Contributed to C++ desktop application extensions for internal CMS platform, implementing features for data synchronization and offline access.
- Refactored critical data access layers to reduce CPU usage and improve I/O throughput, resulting in faster data retrieval.
- Developed internal testing framework for legacy code coverage and regression testing.
- Introduced basic Git-based version control workflows into engineering operations, improving team collaboration.
- Assisted in database migration tasks and schema normalization to prepare systems for future scalability.
- Participated in architectural discussions and brainstorming for new product modules.
- Wrote internal CLI tools using C++ to streamline repetitive administrative tasks.
- Created localized UI components supporting multi-language interfaces for expanded market reach.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Supported development of microservices in Go for data ingestion pipelines, handling several thousand records per second from mobile endpoints.
- Implemented PostgreSQL schema updates and basic sharding for internal experimental features.
- Built reusable logging and telemetry modules shared across services using structured logs and Prometheus metrics.
- Researched and applied basic caching techniques to reduce repeat computation in backend logic.
- Participated in code reviews and sprint planning, working closely with senior engineers.
- Built RESTful endpoints and implemented OpenAPI documentation for developer onboarding.
- Gained exposure to containerization using Docker and started deploying sandbox environments.
- Delivered a successful proof-of-concept feature demo during final internship evaluation.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Certified Kubernetes Application Developer (CKAD) – The Linux Foundation
- ❖ C++ Certified Professional Programmer (CPP) – C++ Institute
- ❖ Go Developer Nanodegree – Udacity
- ❖ Databases: Sharding, Indexing & Caching Masterclass – Coursera

PROJECTS

- ✓ **Distributed Telemetry Pipeline for Real-Time Metrics**
Developed a distributed event pipeline using Go, Prometheus, and Kafka to process and store real-time metrics for microservices. Deployed on Kubernetes with full observability via Grafana dashboards.

✓ **Envoy Custom Filter Module**

Extended Envoy proxy using C++ to add a custom L7 network filter for authentication and traffic shaping. Integrated with internal auth services and validated via automated conformance tests.

✓ **Database Sharding Service Layer**

Engineered a modular Go library to handle automated sharding across PostgreSQL instances, used in multitenant SaaS architecture. Supported dynamic shard assignment and transparent routing logic.
