

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-oriented Senior Software Engineer with 10+ years of experience designing and developing scalable backend systems, APIs, and microservices. Expertise in Golang, Java, Python, and cloud-native solutions including AWS and Kubernetes. Proven ability to deliver high-quality, high-performance systems in fast-paced environments. Strong leadership in mentoring, DevOps culture, and cross-functional collaboration to drive continuous improvement and product excellence.

TECHNICAL SKILLS

- **Languages:** Golang, Java, Python, TypeScript, JavaScript, PHP, SQL, Shell Script
- **Frontend:** React, React Native, Vue.js, Next.js, HTML5, CSS3, TailwindCSS
- **Backend:** Node.js, Express.js, Spring Boot, Laravel, Symfony, NestJS
- **Databases:** PostgreSQL, MySQL, DynamoDB, MongoDB, Redis, Elasticsearch
- **DevOps & Cloud:** AWS (ECS, Lambda, S3, CloudFormation, API Gateway, RDS), Kubernetes, Docker, GitHub Actions, GitLab CI/CD, Terraform
- **Messaging & Streaming:** RabbitMQ, Kafka, AWS EventBridge, SQS
- **Testing:** JUnit, Jest, Mocha, Cypress, Postman, PyTest
- **Monitoring:** Prometheus, Grafana, Datadog, NewRelic
- **Tools:** Git, Jira, Confluence, Figma, Postman, Swagger, VS Code, IntelliJ

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented distributed microservices using Golang and TypeScript to support high-load systems for fintech and e-commerce clients.
- Spearheaded the development of RESTful APIs integrated with React frontends and AWS-native infrastructure, improving response time by 40%.
- Led internal mentoring initiatives, onboarding junior engineers and improving code quality through peer reviews and knowledge sharing sessions.
- Developed CI/CD pipelines using GitHub Actions and Docker to enable rapid, automated deployments with rollbacks and staging environments.
- Integrated Kafka and RabbitMQ for asynchronous workflows and real-time processing of transaction events, enhancing fault tolerance.

- Created observability dashboards with Prometheus and Grafana to proactively monitor system health and performance.
- Maintained Kubernetes deployments on AWS with Helm, ensuring zero-downtime deployments and secure multi-region configurations.
- Participated in Agile ceremonies and coordinated with product owners to deliver customer-focused features ahead of roadmap schedules.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed RESTful backend services using Laravel and Spring Boot to power digital marketing platforms supporting millions of users.
- Built and optimized MySQL and Redis data models to handle large-scale campaign tracking, improving DB performance by 55%.
- Implemented end-to-end testing pipelines and coverage enforcement using Jest, PHPUnit, and Cypress across micro frontends and APIs.
- Delivered infrastructure automation using Docker Compose and Ansible, reducing manual DevOps tasks by 70%.
- Integrated third-party APIs (Facebook, Google Ads) and developed secure OAuth-based authentication layers.
- Enhanced system observability by integrating Datadog for log monitoring, alerts, and performance diagnostics.
- Conducted technical interviews and managed pair programming sessions to improve team collaboration and upskilling.
- Coordinated feature releases using Jira and Confluence, enabling seamless communication with cross-functional teams.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Built and maintained eCommerce and CMS platforms using Symfony and React with robust multi-language and multi-tenant support.
- Architected backend features including custom pricing engines, promotion rules, and invoice generation using PHP and PostgreSQL.
- Integrated AWS S3 for media storage, with secure access layers and lifecycle policies to reduce operational costs.
- Created reusable frontend components and ensured UX consistency using Figma wireframes and design systems.
- Established automated testing and deployment workflows, increasing developer productivity and product stability.
- Supported mobile development integration with React Native APIs, enabling seamless mobile-web data flow.
- Conducted load testing and performance optimization, identifying bottlenecks and reducing API latency by over 30%.
- Collaborated directly with clients and stakeholders in refining product scopes and translating business goals into technical deliverables.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Contributed to backend services for logistics and warehouse automation tools built with Java Spring Boot and Angular.
- Built asynchronous job queues using RabbitMQ and cron jobs for order batching, resulting in 3x faster dispatch planning.
- Developed internal REST APIs and managed integration with third-party shipping carriers.
- Delivered real-time order tracking dashboards using WebSockets and charting libraries.
- Supported transition to Git-based workflows and implemented CI/CD pipelines for daily builds.
- Enhanced database schema design and indexing strategy to support high query volumes.
- Wrote technical documentation and API guides to support smooth client integrations.
- Conducted code reviews and worked closely with QA engineers to meet release criteria.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in building a school administration platform using PHP and JavaScript, providing modules for exams, grading, and attendance.
- Designed relational schemas for student data and reports using MySQL, ensuring integrity and compliance with local policies.
- Developed PDF report generation and export features integrated with teacher dashboards.
- Maintained documentation and improved user experience by resolving UI/UX bugs in legacy pages.
- Supported testing automation using Selenium and PHPUnit, improving regression testing efficiency.
- Collaborated with senior engineers on API designs and contributed to internal tech meetings.
- Engaged in regular pair programming sessions to learn modern coding best practices.
- Delivered small enhancements independently, contributing to increased system usability and performance.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2022)
 - Certified Kubernetes Application Developer (CKAD) – Linux Foundation (2023)
 - Golang for Backend Development – Udemy (2021)
 - Advanced React and TypeScript – Frontend Masters (2023)
-

PROJECTS

Sezzle-like BNPL Platform Clone

- Built a prototype Buy-Now-Pay-Later platform inspired by Sezzle using Golang, PostgreSQL, Redis, and React.
- Architected scalable service-oriented backend with payment scheduling, fraud detection logic, and transaction logging.
- Integrated Stripe API for payment processing and developed secure customer onboarding flows with JWT auth.
- Deployed on AWS with Kubernetes, implemented observability using Prometheus and Grafana dashboards.
- Wrote comprehensive unit and integration test suites, achieving 92% test coverage and 99.99% uptime.
- Created CI/CD pipeline with GitHub Actions enabling automated builds, tests, and blue-green deployments.

E-Commerce Order Management System

- Developed high-availability order management microservices for a multi-vendor platform using Node.js and Golang.
- Used RabbitMQ to queue and process transactional operations like order confirmation and refund settlements.
- Designed database schemas and optimized search queries for multi-dimensional filtering using Elasticsearch.
- Integrated with 3PL shipping APIs and built fulfillment tracking features for warehouse and customer views.

Developer Productivity Tooling for CI/CD

- Created internal tools to enhance developer workflows, including feature toggles, test runners, and pipeline caching.
- Reduced build times by 60% and improved team-wide productivity through automated linting, testing, and deployment scripts.
