

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Backend Developer with 9+ years of experience building scalable systems and robust microservices using Golang, Kotlin, and other backend technologies. Proven expertise in RESTful API development, system optimization, and cloud-native architectures. Adept at collaborating across teams to deliver production-grade, testable, and high-performance solutions. Passionate about backend innovation and continuous improvement in distributed system environments.

TECHNICAL SKILLS

- **Languages:** Golang, Kotlin, Python, TypeScript, JavaScript
- **Backend:** REST APIs, gRPC, Microservices Architecture, Event-driven systems
- **Cloud:** AWS, GCP, Docker, Kubernetes
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **DevOps & Tools:** Git, Jenkins, GitHub Actions, Docker Compose, CI/CD Pipelines
- **Other:** Kafka, RabbitMQ, GraphQL, Clean Architecture, Agile/Scrum

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and developed microservices using Golang and Kotlin, enabling modularization and high scalability for a large-scale logistics platform.
- Led the migration of monolithic services into distributed microservices, reducing system latency by over 35% and increasing deployment frequency.
- Built RESTful APIs consumed by internal tools and third-party clients, ensuring API contract consistency and backward compatibility.
- Integrated Docker-based workflows in CI/CD pipelines, enabling seamless builds and zero-downtime deployments on Kubernetes clusters.
- Engineered high-throughput data ingestion flows using RabbitMQ, improving system resilience and decoupling components effectively.
- Optimized SQL and NoSQL database interactions to improve query response time by 40% in high-traffic environments.
- Implemented unit and integration test suites, achieving over 85% code coverage and ensuring production stability.
- Mentored junior developers and contributed to system design reviews, promoting best practices across the backend engineering team.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Developed backend features for marketing automation platforms using Golang, focusing on RESTful API architecture and modular service design.
- Created data export/import tools that interacted with third-party CRMs, enhancing data pipeline robustness and minimizing downtime.
- Implemented job scheduling features with asynchronous task queues, improving data synchronization performance for clients.
- Collaborated with DevOps to containerize legacy services using Docker and manage deployments via CI/CD pipelines.
- Delivered caching solutions using Redis, reducing load on primary databases and improving system response speed by 20%.
- Built monitoring scripts for system health checks and application logs, proactively identifying issues before escalation.
- Maintained integration with payment providers and ensured compliance with local data processing regulations.
- Participated in architectural discussions and proposed improvements in service communication patterns and error handling.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Designed and maintained backend logic for internal business apps using Golang and Node.js, supporting over 10,000 monthly users.
- Developed microservices with clean separation of concerns and standardized data contracts, improving developer onboarding and scaling.
- Integrated external APIs from partners and vendors, normalizing data ingestion and ensuring availability across services.
- Contributed to CI/CD setup using Jenkins and GitLab CI, automating test and deployment cycles for increased release confidence.
- Refactored critical codebases to adopt SOLID principles and reduce technical debt accumulated in legacy modules.
- Designed PostgreSQL schemas optimized for both OLTP and reporting use cases, ensuring minimal query lag under peak traffic.
- Conducted code reviews and documentation walkthroughs, improving code maintainability and team communication.
- Played a key role in migrating services to containerized infrastructure, reducing server provisioning and management overhead.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Implemented backend functionality in Go and PHP for web-based dashboards and analytics modules in client projects.
- Designed API endpoints for data visualization tools, enabling near-real-time tracking and reporting of marketing metrics.

- Collaborated closely with front-end developers to define clear API schemas and ensure alignment with UI expectations.
- Performed load testing and benchmarking to uncover performance bottlenecks in early-stage service builds.
- Used Docker for local development and testing, streamlining handoff between dev and staging environments.
- Participated in agile sprint planning and delivery sessions, contributing to on-time client deployments.
- Developed unit tests for new services, enforcing test-driven development practices across the team.
- Assisted in integrating third-party authentication providers for user login flows across multiple applications.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Built backend modules for internal HR management tools using Golang and MySQL, improving reporting accuracy.
- Created API wrappers to integrate third-party APIs into internal dashboards, automating cross-platform operations.
- Designed a small-scale notification microservice to handle real-time alerts for time-sensitive updates.
- Applied database indexing and optimization techniques to reduce data query lag in legacy systems.
- Collaborated in writing unit and integration tests using Go's testing package, increasing test coverage significantly.
- Conducted codebase audits to identify redundant dependencies and streamline application build times.
- Developed internal tooling for task automation, reducing repetitive workload across QA and DevOps.
- Gained experience working in cross-functional teams, contributing to team stand-ups and agile ceremonies.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Certified Golang Backend Developer – Udemy / GoExpert, 2024
 - ❖ Kotlin for Backend Development – JetBrains Academy, 2023
 - ❖ Docker & Kubernetes Essentials – Coursera, 2023
 - ❖ Microservices with Go & gRPC – Udacity, 2022
-

PROJECTS

- ✓ **CRM Data Integrator (Sensidev)**

Built a modular backend platform in Golang and Kotlin for syncing and enriching CRM records across multiple sources. Enabled seamless integration with Salesforce and HubSpot through RESTful APIs and event-driven architecture.

- ✓ **Marketing Automation Engine (Syscom Digital)**

Engineered backend core for an automation tool handling customer journeys, campaign scheduling, and analytics using microservices, PostgreSQL, and Redis with Golang.

- ✓ **Containerized DevOps Pipeline (Soft Build)**

Led the effort to migrate development workflows into a Dockerized CI/CD setup. Reduced integration issues by 60% and enabled parallel pipeline executions across microservices.
