

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Backend Engineer with over 8 years of experience building and scaling distributed backend systems, specializing in Golang, Kubernetes, cloud-native technologies, and high-performance SaaS platforms. Passionate about writing clean code, optimizing system performance, and delivering enterprise-grade solutions.

TECHNICAL SKILLS

- **Languages:** Golang, JavaScript, TypeScript, Python, PHP, SQL, Bash
- **Cloud Platforms:** AWS (ECS, EKS, Lambda, S3), GCP (GKE, BigQuery, Cloud Functions), Azure (AKS, Blob Storage)
- **Containerization & Orchestration:** Docker, Kubernetes, Helm, GitOps
- **Databases:** PostgreSQL, ClickHouse, MySQL, MongoDB, Redis
- **Big Data:** Spark, Trino, Parquet, Iceberg (familiarity)
- **CI/CD:** GitHub Actions, GitLab CI, Bitbucket Pipelines
- **DevOps & Monitoring:** Prometheus, Grafana, ELK Stack, Datadog, Terraform
- **Version Control:** Git, GitHub, Bitbucket
- **Other:** REST APIs, Microservices, Event-driven architecture, gRPC, WebSockets, Agile/Scrum

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented a microservices-based architecture using Golang, Docker, and Kubernetes, improving system modularity and scalability across deployments.
- Built distributed data pipelines for high-throughput data ingestion using Kafka and PostgreSQL, ensuring optimized processing and minimal latency.
- Migrated legacy services to Golang with focus on code maintainability, benchmarking, and improved observability using Prometheus and Grafana.
- Integrated AWS services including ECS, Lambda, and S3 to build a resilient, scalable cloud-based backend infrastructure.
- Developed RESTful APIs and integrated third-party payment systems using secure token-based authentication and OAuth2.
- Conducted regular code reviews and pair programming sessions, enforcing clean code practices and design patterns like Repository and CQRS.

- Led Kubernetes resource optimization efforts by tuning pod configurations, resource quotas, and autoscaling policies, reducing cloud costs by 28%.
- Created and maintained Terraform modules for provisioning infrastructure across AWS and GCP environments.
- Implemented GitOps-based CI/CD pipelines to automate deployments and improve team velocity by 40%.
- Championed container security best practices and integrated image scanning tools in the CI pipeline.
- Partnered with DevOps and frontend teams to define service contracts and maintain high availability in production.
- Participated in roadmap planning and technical scoping sessions, providing architecture input and feasibility analysis.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed and deployed backend services in Golang and Python to handle campaign automation, analytics, and real-time messaging.
- Utilized PostgreSQL and Redis to store and retrieve marketing data efficiently, incorporating performance tuning techniques for optimal querying.
- Introduced ClickHouse for analytical workloads, achieving sub-second response times on dashboards with millions of records.
- Built microservices communicating over gRPC and REST, adopting API versioning strategies to ensure backward compatibility.
- Designed a Kafka-based event system for loosely coupled services, supporting event sourcing and retry policies.
- Managed Dockerized workloads deployed on Kubernetes clusters, enabling blue-green deployment and zero-downtime updates.
- Worked with GCP's BigQuery and Cloud Functions to extract, transform, and load campaign metrics across geographies.
- Integrated monitoring and alerting systems with Datadog and Prometheus to reduce incident response time by 35%.
- Participated in SRE on-call rotations and incident post-mortems, ensuring production resilience and documenting recovery protocols.
- Collaborated with frontend engineers to expose scalable GraphQL endpoints and implemented caching layers with Redis.
- Provided technical documentation, API specs, and onboarding guides to ease internal developer adoption.
- Championed regular refactoring sprints and test automation initiatives to reduce code complexity and increase test coverage.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Led backend development for enterprise CMS and e-commerce platforms using PHP (Laravel), JavaScript (Node.js), and MySQL.
- Refactored large monolithic codebases into service-oriented components, resulting in reduced technical debt and improved agility.
- Optimized MySQL queries and created smart indexes to reduce average response times by 50% for high-traffic endpoints.
- Designed job queues for async data processing using RabbitMQ and Laravel Horizon, enabling scalability during peak periods.

- Integrated payment gateways (Stripe, PayPal) with multi-currency support and secure transaction processing.
- Built automated testing pipelines using PHPUnit and Jenkins to enforce code reliability and reduce regression issues.
- Applied OWASP guidelines for security and regularly ran audits to ensure codebase compliance.
- Mentored junior developers and conducted onboarding sessions for new team members.
- Maintained user access controls and audit logging systems in accordance with GDPR requirements.
- Supported client teams by creating admin dashboards and APIs for B2B partner integrations.
- Collaborated with UI/UX designers to streamline frontend-backend integration and build responsive admin tools.
- Used GitFlow workflow and managed deployments with GitLab pipelines and SSH automation scripts.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Worked in a fast-paced agency setting building full-stack solutions in PHP and JavaScript.
- Developed RESTful APIs and backend modules for custom CMS platforms using Laravel.
- Deployed client applications on AWS EC2 and implemented CI pipelines with TravisCI.
- Built modular interfaces using Vue.js to improve dynamic content rendering and user experience.
- Assisted in migrating legacy projects from Apache to Nginx for better performance and SSL support.
- Wrote comprehensive deployment and support documentation for customer handoff.
- Collaborated closely with designers and stakeholders to gather feature requirements.
- Assisted DevOps engineer in setting up Docker Compose environments for testing.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted senior developers in building internal tools and web scrapers using Python and BeautifulSoup.
- Wrote unit tests and performed manual QA testing on frontend modules.
- Participated in agile planning and team retrospectives as a contributor.
- Refactored scripts to improve error handling and reduce runtime by 40%.
- Managed code repositories in Git and participated in code reviews for knowledge sharing.
- Set up logging mechanisms and simple monitoring dashboards using ELK Stack.
- Built test harnesses for performance benchmarks on internal services.
- Attended customer demos and helped document bugs for sprint planning.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Solutions Architect – Associate (2023)
 - ❖ Google Cloud Professional Cloud Architect (2022)
 - ❖ Kubernetes Certified Application Developer (CKAD) (2021)
-

PROJECTS

- ✓ **Kubernetes Cost Optimizer:** Designed a rules-based Kubernetes autoscaler integrated with Prometheus metrics to reduce unused resource allocations. Led implementation in Golang with REST API and Helm deployment.
- ✓ **CloudOps Dashboard:** Built a dashboard for real-time health and cost metrics across AWS and GCP using Grafana, ClickHouse, and custom ingestion services written in Go.
- ✓ **Microservice Telemetry:** Developed a lightweight tracing module in Go using OpenTelemetry, integrated across 15+ microservices.
