

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Full Stack Engineer and Technical Team Lead with 9+ years of progressive experience architecting and building performant backend systems and frontend interfaces. Extensive leadership in fast-paced fintech and ERP domains. Strong focus on high-performance Node.js and Go development, real-time data processing, microservices, and CI/CD infrastructure. Proven success in leading cross-functional teams, designing scalable backend systems, and deploying fault-tolerant distributed applications.

TECHNICAL SKILLS

- **Languages:** Go, Node.js, TypeScript, JavaScript, Python, SQL, HTML, CSS
- **Frameworks:** Express, Fastify, Go Fiber, FastAPI, React, Next.js, Tailwind CSS
- **Cloud & Infrastructure:** Docker, GitHub Actions, Heroku, DigitalOcean, Nginx, Vercel, Linux Shell
- **Databases:** PostgreSQL, MongoDB, MySQL, Elasticsearch
- **DevOps:** CI/CD Pipelines, GitHub Actions, Docker Compose, Linux VM Management
- **Other Tools:** Git, Postman, JIRA, Confluence, Storybook, Figma
- **Testing:** Jest, Mocha, Pytest, React Testing Library

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Spearheaded architecture and backend service refactors using Node.js and Go, enabling sub-200ms response times across ERP-linked APIs for thousands of users globally.
- Led a cross-functional squad of 6 engineers to replatform legacy services into microservices using Fastify (Node.js) and Go Fiber, resulting in 40% lower infrastructure costs.
- Directed the CI/CD strategy by introducing Dockerized test environments and GitHub Actions workflows, cutting manual QA cycles by 75% and supporting bi-weekly releases.
- Orchestrated Odoo ERP integrations with Go microservices, ensuring seamless real-time data syncs for HR, invoicing, and logistics modules used by enterprise clients.
- Implemented distributed tracing and centralized logging using ELK stack, drastically reducing the mean time to resolution (MTTR) for production issues.
- Mentored 3 junior backend developers and introduced peer-review protocols, leading to improved code quality metrics and cross-training in backend performance optimization.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Engineered asynchronous API orchestration layer using Node.js for digital marketing platforms, improving throughput for ad targeting and analytics by over 300%.
- Designed scalable architecture patterns using event-driven paradigms with RabbitMQ and Go, enabling seamless integration of campaign tracking services.
- Constructed data ingestion services with FastAPI and PostgreSQL, streamlining ETL pipelines for 8+ enterprise clients and reducing report generation lag by 70%.
- Collaborated with frontend teams to define GraphQL contracts and REST interface schemas, ensuring robust versioning and backward compatibility for mobile SDKs.
- Refactored legacy codebases into modular Node.js services with 85% unit test coverage, resulting in more predictable deployments and fewer hotfixes.
- Acted as lead for platform uptime audits and spearheaded SLO/SLI metrics adoption, aligning system monitoring with business-critical KPIs.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Designed performant finance and HR backend services using Go and PostgreSQL, optimizing DB queries and indexes to support 20K+ daily transactions in ERP workflows.
- Migrated monolithic Python ERP services into Docker-based Go microservices, allowing modular deployments and halving deployment downtime.
- Led the integration of external APIs (e.g., Mailgun, Zoho, Google Drive) into internal automation flows, reducing manual workflows and error rates by over 60%.
- Developed internal dashboards with React and Node.js to visualize key business metrics, significantly improving management decision timelines.
- Conducted regular code reviews and internal training sessions on Go programming practices and testing strategies, improving onboarding time for new hires.
- Authored end-to-end documentation and versioned API specifications that streamlined third-party integrations and internal audits.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Created real-time data sync services between ERP systems using Node.js and RabbitMQ, ensuring millisecond latency on journal entry updates across platforms.
- Modernized frontend logic and admin interfaces using React and JavaScript, boosting data entry efficiency by 35% in back-office tools.
- Developed data processing and reconciliation tools in Go and Python, automating financial entry validations and reducing month-end close time.
- Built CI pipelines and deployment scripts using GitLab, Docker, and shell scripting, automating staging rollouts and reducing deployment errors.
- Contributed to the ERP refactor roadmap by analyzing and isolating monolithic services and prototyping them in Go for future microservice migration.

- Paired with senior engineers in code refactoring and architecture reviews, enhancing design awareness and system decomposition strategies.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Developed Python backend services and FastAPI microservices to expose ERP-related metadata for downstream integration layers.
 - Contributed to early Go microservice experiments that supported ERP logging and user activity metrics with structured schemas.
 - Built utility scripts and database fixtures for faster test environments, supporting agile team velocity in early-stage prototypes.
 - Designed minimal dashboards using vanilla JS and HTML, visualizing system health metrics and administrative audit trails.
 - Shadowed senior engineers in architecture meetings and roadmap planning, gaining early exposure to systems thinking and refactor patterns.
 - Authored internal wikis and technical notes that improved junior developer onboarding and reduced ramp-up time by 40%.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Python for Data Science – Coursera
 - ❖ Docker for Developers – Udemy
 - ❖ Odoo Technical Training – OdooClass
-

PROJECTS

- ✓ **ERP Campaign Sync Tool:** Custom Python + Odoo module to sync campaign status, metrics, and leads from third-party CRM APIs.
- ✓ **Finance Report Generator:** Backend microservice using FastAPI + Pandas to process and generate real-time financial reports in PDF/CSV.
- ✓ **Odoo CI/CD Pipeline:** Built automated deployment pipelines for Odoo modules with Docker, GitHub Actions, and PostgreSQL fixtures.
