

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Backend Engineer with 9+ years of progressive experience in backend systems architecture, API design, and distributed service engineering. Proven expertise in Golang and PostgreSQL infrastructure, with direct experience integrating LLMs and building AI agents for intelligent applications. Demonstrated leadership in regulated sectors with a focus on HIPAA-compliant systems, healthtech innovation, and AI productization. Passionate about food-as-medicine and building resilient, scalable AI-powered platforms.

TECHNICAL SKILLS

- **Languages:** Golang, TypeScript, JavaScript, PHP, Python, SQL
- **AI/ML & LLMs:** OpenAI API, LangChain, RAG Systems, HuggingFace, GPT-based Agents
- **Backend & API:** REST, GraphQL, gRPC, API Gateway, Microservices, Secure Auth
- **Databases:** PostgreSQL, MySQL, Redis, MongoDB
- **Cloud & DevOps:** AWS, Docker, Kubernetes, GitHub Actions, Terraform
- **Security & Compliance:** HIPAA readiness, OAuth2, JWT, Secure storage & encryption
- **Tools:** Git, Jira, Figma, Postman, Swagger, Slack, Notion
- **Healthcare:** EMR/FHIR integration, symptom tracking, patient feedback loops

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led the architecture and development of backend features for a telemedicine platform using Golang and PostgreSQL, with a focus on secure patient data flows and multi-tenant scalability.
- Integrated OpenAI API and custom LangChain agents to auto-summarize symptom logs and personalize treatment suggestions across 10k+ monthly users.
- Designed and deployed HIPAA-compliant backend systems, including encrypted storage pipelines and access-controlled APIs using OAuth2 and JWT.
- Developed a GraphQL layer on top of existing microservices to unify nutrition plan data, health records, and AI-generated recommendations.
- Spearheaded the migration of legacy monoliths into containerized microservices hosted on AWS ECS with secure CI/CD via GitHub Actions.
- Collaborated with AI researchers and UX teams to test NLP-powered interfaces for dynamic meal scoring and health intervention suggestions.

- Supervised and mentored junior developers, introducing coding standards, secure software development practices, and sprint planning.
- Built RAG-based AI agents for personalized nutrition guidance, leveraging vector search for food scoring relevance in real-time feedback loops.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed high-performance RESTful APIs for IoT-driven health monitoring systems, connecting wearable sensor data with nutrition platforms.
- Created scalable backend components in Golang to process and aggregate longitudinal biomarker data across patient journeys.
- Implemented OpenID Connect for secure data access between mobile health apps and internal APIs across a multi-region deployment.
- Enhanced backend services to support natural language symptom logging and classification through HuggingFace Transformers.
- Collaborated with data science teams to integrate AI prediction models into real-time feedback systems for meal plan suggestions.
- Built alert systems for patient-reported symptom anomalies using event-driven architecture and message queues.
- Contributed to the design and documentation of HIPAA audit trails and secure logging across distributed services.
- Participated in cross-functional scrum teams delivering weekly product releases and compliance features.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Maintained and optimized backend services for a digital health tracker app used by over 50,000 users globally.
- Developed RESTful APIs in PHP and later transitioned to Golang for improved performance and maintainability.
- Wrote data ingestion pipelines that processed food intake logs, nutrient databases, and symptom patterns for analysis.
- Integrated third-party food composition APIs to enrich user meal plans with real-time nutritional insights.
- Implemented a role-based permission system ensuring patient data security and proper access control.
- Collaborated with mobile developers to build APIs for real-time symptom journal feedback and recommendations.
- Designed secure PostgreSQL schemas for storing sensitive medical data including symptoms, meal logs, and treatment notes.
- Established unit testing practices and introduced TDD for new features and bug fixes.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built backend infrastructure for health-related e-commerce products and dietary supplement trackers.

- Used Node.js and MongoDB to prototype analytics dashboards for nutrient consumption and fitness data.
- Developed secure checkout APIs and integrated Stripe for compliant payment processing.
- Participated in infrastructure planning for HIPAA-grade hosting environments.
- Automated deployment pipelines with Docker and Nginx reverse proxies for backend services.
- Contributed to user authentication and session security design for nutrition tracking interfaces.
- Worked closely with product teams to implement NLP-based search for dietary recommendations.
- Created CI/CD pipelines and QA test frameworks for deployment workflows.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Supported the development of early-stage nutrition apps with a focus on diet tracking and caloric intake scoring.
- Created REST APIs to track user goals, meal logs, and nutrient breakdown.
- Wrote SQL queries and cron jobs to generate weekly dietary compliance reports for pilot users.
- Assisted in setting up early CI pipelines for automated integration testing.
- Conducted QA on mobile app features and backend endpoints.
- Integrated open food databases to suggest alternative meals based on nutrient deficiencies.
- Designed user onboarding flow with logic branching based on health goals.
- Participated in early-stage product planning and backend API schema modeling.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Certified HIPAA Security Professional (CHSP)
- ❖ LangChain AI Agent Development Masterclass
- ❖ OpenAI API Engineering Essentials
- ❖ AWS Certified Solutions Architect – Associate

PROJECTS

- ✓ **LLM-Powered Symptom Feedback Loop:** Designed a system using OpenAI + LangChain for analyzing patient feedback and adjusting personalized food plans based on reported symptoms, integrated into GraphQL API.
- ✓ **AI Nutrition Planner:** Built a RAG-powered AI agent that scored meals based on personal nutrient goals and medical conditions, processing data from USDA and internal food scoring models.
- ✓ **Secure Health Data Platform:** Architected a HIPAA-compliant backend for symptom tracking, encryption-at-rest data stores, and FHIR-compatible endpoints for hospital integrations.

- ✓ **Personalized Meal Chatbot:** Created a GPT-based chatbot to answer meal-related queries and dietary advice with real-time plan adjustments based on LLM reasoning.
