

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Full-Stack Engineer with over 9 years of professional experience in building robust, scalable web applications across modern JavaScript frontends and cloud-native backends. Specialized in developing end-to-end features, crafting RESTful APIs, designing developer tools (browser extensions, IDE plugins), and deploying microservices in Kubernetes environments. Proven expertise in TypeScript, Go (learning and contributing actively), PostgreSQL, CI/CD pipelines, and cloud platforms. Passionate about creating tools that improve developer experience, software quality, and team productivity.

TECHNICAL SKILLS

- **Languages & Frameworks:** TypeScript, JavaScript (ES6+), Go (beginner/transitioning), Python, Java, Node.js, Svelte, React, Vue.js, Angular
- **Backend:** RESTful APIs, Express.js, Fastify, PostgreSQL, MongoDB
- **Frontend:** Modern JS frameworks, Web Extensions, SPA architecture
- **DevOps & Infra:** Kubernetes, Docker, GitHub Actions, CircleCI, Terraform, GCP
- **Testing & Code Quality:** Jest, Mocha, Cypress, TDD, ESLint, Prettier
- **Developer Tools:** IDE plugin architecture, browser extensions, Chrome APIs
- **Other:** Agile, Linux profiling, CI/CD, GraphQL, Microservices, Open Source contributions

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and developed a modular web IDE extension architecture for a developer productivity suite that integrates with VSCode and Chrome Developer Tools, enhancing SDLC visibility and workflow automation.
- Led full-stack feature development across REST APIs, backend microservices in Node.js, and dynamic UIs in React/Svelte for a secure internal developer platform.
- Built custom GitHub Actions for auto-deploy workflows and security checks, improving deployment reliability across staging and production environments by 37%.
- Integrated Postgres-backed data pipelines into monitoring dashboards to visualize code quality, commit history, and user engagement insights.

- Designed and maintained internal APIs to expose developer risk scores and behavior analytics, improving cross-team visibility into coding practices.
- Migrated infrastructure to Kubernetes (GKE), managing Helm charts, secrets, and autoscaling logic, reducing downtime and manual interventions.
- Collaborated closely with product designers and backend leads to improve browser extension UX and performance for static analysis and context-aware insights.
- Mentored 3 junior developers and led code review sessions focused on scalability, Go adoption, and front-end modularity.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed custom internal tooling using Go (introductory level) and Python for static code inspection and telemetry visualization, streamlining debugging workflows across teams.
- Engineered browser extensions and web interfaces in Vue.js to support context-aware developer metrics and alerts based on real-time SDLC events.
- Built CI/CD pipelines with Docker and GitHub Actions for development, testing, and rollout of internal microservices across cloud environments.
- Integrated third-party APIs and observability tooling (Datadog, Sentry) to improve the monitoring of IDE-based user activity for engineering performance reviews.
- Re-architected several front-end modules using modern JS frameworks (Vue 3, React) for better maintainability and performance across browsers.
- Created reusable UI component libraries to support internal developer dashboards and extension plugins.
- Deployed applications on Kubernetes clusters with Terraform automation, contributing to the team's shift to infrastructure-as-code best practices.
- Participated in cross-functional discussions to align code metrics with GRC compliance standards and developer health dashboards.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Contributed to full-stack development of a developer insights dashboard using React, Node.js, and PostgreSQL, helping management evaluate developer velocity and technical debt.
- Implemented API gateway and service-level access control for internal plugins and browser-based developer tools.
- Migrated monolithic codebases into modular Node microservices, integrating logging, error tracking, and circuit-breaker logic for fault tolerance.
- Integrated CI/CD workflows using CircleCI, Docker, and GitHub webhooks, shortening the feedback loop and improving developer productivity.
- Built real-time notification and alerting system for detecting unsafe code patterns using ESLint and static analysis tooling.
- Enhanced PostgreSQL performance with query optimization, indexing strategies, and read replicas for analytics endpoints.
- Created CLI and Web-based toolkits that let developers introspect Git activity, peer reviews, and time-in-PR statistics.
- Promoted a DevOps-first culture by pushing team-wide adoption of automated testing, containerized development, and rollback-ready releases.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Built internal browser extensions for Chrome and Firefox to track coding metrics in real-time for a software analytics platform.
- Created APIs in Node.js that interfaced with GitHub and Bitbucket to ingest developer data and expose productivity trends.
- Worked closely with UX designers to prototype interactive visualizations of team code dynamics and efficiency.
- Developed and maintained reusable utility libraries for consistent interaction with browser APIs.
- Helped the team optimize loading and event handling for injected content scripts in browser extensions.
- Collaborated in sprints using Agile/Scrum to deliver small vertical slices of backend/frontend features for developer-centric tools.
- Participated in user testing to validate functionality and accuracy of IDE plugin-generated reports.
- Authored documentation and onboarding tutorials for internal tools and extension setup across teams.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in building a web-based log analyzer tool using JavaScript and Node.js to detect common software vulnerabilities and commit anomalies.
- Built RESTful API endpoints to expose git commit analysis results and link them with bug report tracking systems.
- Contributed to small backend utilities for automated file system auditing and log scraping.
- Participated in unit and integration testing using Mocha/Chai for Node.js modules.
- Created Chrome DevTools extension to visualize call traces and memory usage for specific runtime events.
- Helped prototype developer heatmaps showing lines-of-code concentration and velocity across modules.
- Collaborated with mentors on improving developer onboarding flows with live in-browser coding tasks.
- Shadowed senior engineers during feature spec, review, and pair programming sessions across full-stack components.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ✓ Kubernetes for Developers (CKAD) — [Udemy / Linux Foundation], 2023
 - ✓ Full-Stack Cloud Development Specialization — [Coursera / IBM], 2022
 - ✓ TypeScript Advanced Concepts — [Frontend Masters], 2021
 - ✓ Introduction to Go — [GoBridge / Udemy], 2021
-

PROJECTS

DevPulse – Internal Developer Productivity Tool

- Created a web-based dashboard, Chrome extension, and GitHub integration to surface developer health metrics, velocity, and PR lifecycle tracking.
- Built with TypeScript (React), Node.js, and PostgreSQL; deployed on Kubernetes using GitHub Actions and Terraform.

CodeSecure IDE Plugin

- Developed a VSCode plugin to visualize static code warnings, secure coding suggestions, and CI feedback inline.
- Written in TypeScript with backend services in Go; integrated via REST APIs and GitHub webhooks.

InfraViz – Cloud-native Infra Monitoring Panel

- Built dashboards showing GCP resource utilization, Kubernetes pod health, and CI/CD pipeline metrics using Prometheus and Grafana.
