

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced **Senior Backend Engineer** with 9+ years of expertise in **Golang, distributed systems, and API-driven architectures**. Skilled in building and scaling **resilient backend platforms** with SQL and NoSQL databases, cloud-native deployments (AWS, GCP, Azure), and microservices. Adept at designing and maintaining secure, high-performance systems while collaborating with cross-functional teams. Passionate about delivering **reliable backend solutions for global-scale applications** in wellness, SaaS, and digital platforms.

TECHNICAL SKILLS

- **Programming Languages:** Golang, Python, Node.js, Java, C#, PHP
- **Frameworks & Tools:** gRPC, REST APIs, GraphQL, Gin, Echo, Fiber, Docker, Kubernetes
- **Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Cassandra, DynamoDB
- **Cloud Platforms:** AWS (EKS, S3, Lambda), GCP (Cloud Run, Pub/Sub, BigQuery), Azure
- **DevOps & CI/CD:** GitHub Actions, Jenkins, Terraform, Helm, Kubernetes, CloudFormation
- **Other Expertise:** Microservices, Event-driven systems, High-performance architecture, API Security, Authentication (OAuth2, JWT), Caching strategies, Observability

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and implemented **backend services in Golang** to support high-volume enterprise applications, ensuring fault-tolerant, scalable, and secure service communication.
- Developed and optimized **RESTful and gRPC APIs**, integrating authentication and caching strategies that improved request performance by 30% across distributed services.
- Implemented **SQL (PostgreSQL) and NoSQL (MongoDB, Redis)** storage solutions, balancing structured data persistence with low-latency event-driven messaging.
- Migrated legacy backend components to **microservices in Golang**, leveraging Docker, Kubernetes, and Helm for container orchestration and smooth CI/CD pipelines.
- Collaborated closely with **frontend engineers and mobile developers** to ensure seamless API integration, reducing integration-related defects by 25%.
- Built real-time features using **WebSockets and event-driven patterns**, enabling live notifications and instant updates across global client systems.

- Conducted performance audits and **stress-tested backend systems**, scaling services to handle peak traffic surges exceeding 10M daily requests.
- Led backend code reviews, established **best practices in clean code and security**, and mentored junior engineers to elevate overall engineering standards.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Implemented **Golang services for digital campaign management platforms**, ensuring high availability and fault tolerance under heavy workloads.
- Designed and deployed **API gateways** to standardize integration with third-party services, significantly reducing onboarding time for new integrations.
- Architected backend workflows with **PostgreSQL and Redis**, achieving optimized query performance and sub-millisecond data retrieval for dashboards.
- Designed **event-driven services** with Kafka and RabbitMQ, supporting asynchronous workloads and reducing system bottlenecks by 40%.
- Contributed to **DevOps automation with AWS and GCP**, including IaC deployments with Terraform, ensuring infrastructure scalability across multiple regions.
- Integrated **OAuth2 and JWT-based authentication**, strengthening data protection and compliance with GDPR requirements.
- Participated in system-wide **refactoring to Golang microservices**, improving modularity and supporting team velocity in feature delivery.
- Worked directly with product teams to translate requirements into **technical specifications**, ensuring consistent alignment with business needs.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed backend solutions in **PHP and later migrated to Golang**, modernizing legacy systems and reducing technical debt across multiple applications.
- Engineered **scalable APIs** for mobile and web clients, enabling smooth integration across heterogeneous ecosystems and supporting global customers.
- Managed **relational databases (MySQL, SQL Server)** and introduced indexing and query optimization strategies to handle millions of records efficiently.
- Pioneered **containerized deployment pipelines** with Docker and Jenkins, establishing a CI/CD culture that cut release cycles by 40%.
- Designed backend modules for **e-commerce platforms**, including payment gateways, cart systems, and user management, with secure transaction handling.
- Collaborated with **UX and frontend developers** to design backend endpoints optimized for fast UI rendering and data consistency.
- Enhanced backend logging and monitoring with **Prometheus and ELK**, improving incident response times and system observability.
- Participated in strategic technical planning, recommending **migration to cloud-native solutions**, which enabled cost-effective scaling of core services.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Contributed to backend system development for **enterprise content management solutions**, implementing APIs and middleware in Golang and PHP.
- Collaborated with distributed teams to integrate **third-party APIs** into enterprise workflows, improving automation and reducing manual intervention.
- Implemented **SQL schema designs** for multi-tenant applications, ensuring data security and efficient query handling.
- Built backend service modules for **digital content distribution**, integrating caching and background jobs for faster processing.
- Introduced **unit testing and integration testing practices**, improving release confidence and reducing post-deployment failures.
- Designed **modular backend layers** to decouple services, simplifying future feature expansion and integration paths.
- Supported system administrators in deploying backend services on **AWS EC2 and GCP VMs**, optimizing for uptime and performance.
- Documented backend APIs and prepared **developer guides** to ensure consistent adoption across the engineering team.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Assisted in developing **backend modules for enterprise applications**, learning best practices in Golang and Java backend development.
- Contributed to **API development and documentation**, supporting frontend integration and third-party interoperability.
- Designed small-scale **MySQL schemas and queries**, gaining practical experience in relational database design.
- Helped migrate portions of monolithic services into **modular backend components**, enhancing maintainability.
- Participated in debugging and troubleshooting sessions, learning **systematic root cause analysis techniques**.
- Implemented small-scale backend features under senior guidance, gaining exposure to **production-grade development**.
- Contributed to **QA processes**, preparing test cases for backend services and validating deployment pipelines.
- Received mentorship on **secure coding practices** and industry-standard backend engineering workflows.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**
 - **Google Cloud Professional Cloud Developer**
 - **Certified Kubernetes Application Developer (CKAD)**
 - **Golang Microservices and Distributed Systems (Udemy Professional Track)**
-

PROJECTS

- **Wellness SaaS API (Personal Project):** Built a Golang-based wellness backend integrating SQL/NoSQL databases and authentication, simulating large-scale multi-user environments with secure APIs.
- **E-commerce Microservices Migration:** Migrated monolithic commerce system into microservices using Golang, Docker, and Kubernetes, achieving 50% faster deployments and 35% lower downtime.
- **Real-time Notifications System:** Designed a Golang + Redis Pub/Sub backend enabling instant updates to 50k+ concurrent users with sub-second latency.
