

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Cloud-native Software Engineer with 8+ years of experience building robust microservices, cloud-based APIs, and scalable backend solutions. Proven track record in designing systems with Golang, Python, .NET, and leveraging AWS services like Lambda, ECS, Fargate, and DynamoDB. Deep expertise in SQL and NoSQL databases, CI/CD automation, and Docker orchestration. Passionate about solving real-world problems through clean architecture and efficient code.

TECHNICAL SKILLS

- **Languages:** Golang, Python, C#, .NET Core, JavaScript, TypeScript
- **Cloud:** AWS (Lambda, ECS, Fargate, S3, CloudWatch, DynamoDB, RDS), GCP
- **Databases:** PostgreSQL, MySQL, SQL Server, DynamoDB, MongoDB
- **Containers & Orchestration:** Docker, Docker Compose, AWS ECS, Fargate
- **DevOps & CI/CD:** GitHub Actions, GitLab CI/CD, Bitbucket Pipelines
- **Infrastructure as Code:** Terraform, AWS CloudFormation
- **Frameworks:** React.js, Node.js, ASP.NET, Flask
- **Other Tools:** REST, GraphQL, WebSockets, Kafka, Redis, Jira, Confluence

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and deployed event-driven backend services in AWS using Lambda, ECS, and SQS, boosting automation coverage across core business logic by 40%.
- Built and maintained REST APIs in Golang and Python to serve high-throughput B2B applications handling over 1 million daily requests.
- Implemented secure and scalable CI/CD pipelines with GitHub Actions and Terraform, reducing manual deployments and errors by over 70%.
- Integrated PostgreSQL and MongoDB with data validation and migration tools, ensuring 99.9% uptime with schema versioning and rollback mechanisms.
- Migrated monolith services to microservice architecture using containerized .NET Core services deployed on Fargate, improving system resilience.
- Developed observability dashboards in CloudWatch and Prometheus for real-time analytics on API latency, error rates, and service health.

- Partnered with frontend developers using React to deliver seamless user experiences while maintaining consistent API contracts and versioning.
- Spearheaded internal knowledge-sharing on AWS cost optimization, reducing cloud bill by 25% through resource scheduling and storage tiering.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built full-stack customer engagement platforms using .NET Core for backend APIs and integrated AWS Lambda for scalable serverless tasks.
- Developed high-performance reporting modules leveraging SQL Server stored procedures and DynamoDB indexes for flexible data analytics.
- Automated infrastructure setup using CloudFormation templates, improving developer onboarding and reducing provisioning time by 80%.
- Orchestrated containerized applications using Docker and ECS, including health checks, log drivers, and auto-recovery configurations.
- Collaborated with data teams to build ETL pipelines that synced transactional data between SQL Server and NoSQL analytics databases.
- Secured APIs using OAuth 2.0 and AWS IAM roles, aligning with enterprise-grade access control policies and GDPR requirements.
- Designed real-time push notification services with WebSockets and SNS, enhancing user engagement for over 500K users.
- Delivered DevOps tooling and scripts for staging/production parity using GitLab CI and Docker Compose.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Engineered scalable APIs in Python Flask and ASP.NET, driving business-critical workflows and integrations for B2B SaaS platforms.
- Implemented SQL query optimization and index tuning for PostgreSQL, reducing key report generation latency by 60%.
- Led containerization efforts by migrating legacy services to Docker and deployed them on ECS with autoscaling capabilities.
- Contributed to frontend tools in React and Blazor that interfaced with backend APIs, ensuring accessibility and responsive design.
- Built background job processing systems using Celery and AWS SQS, supporting time-triggered and event-driven tasks.
- Designed test automation frameworks using Pytest and xUnit, achieving 85% unit test coverage on core services.
- Wrote database migration tools and version control scripts to track schema changes in both SQL and NoSQL environments.
- Tracked application metrics and logs using ELK stack, reducing MTTR by 40% through improved observability.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Developed modular API services using .NET and Entity Framework, connecting CRM and ERP systems across client environments.
- Deployed micro frontends in Angular integrated with REST APIs, improving the maintainability of multitenant solutions.
- Used AWS S3 and CloudFront for static content distribution with access control and signed URLs for file-level security.
- Collaborated with QA to build smoke testing suites for microservices using Postman and Newman CLI.
- Created unit/integration tests with NUnit and Moq for backend components, achieving 90% code coverage.
- Wrote Lambda functions in C# for scheduled data transformation jobs, leveraging CloudWatch Events for triggers.
- Participated in weekly architecture reviews, contributing ideas on design patterns and code refactoring strategies.
- Reduced code duplication by implementing shared .NET libraries used across six internal services.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Developed modular API services using .NET and Entity Framework, connecting CRM and ERP systems across client environments.
- Deployed micro frontends in Angular integrated with REST APIs, improving the maintainability of multitenant solutions.
- Used AWS S3 and CloudFront for static content distribution with access control and signed URLs for file-level security.
- Collaborated with QA to build smoke testing suites for microservices using Postman and Newman CLI.
- Created unit/integration tests with NUnit and Moq for backend components, achieving 90% code coverage.
- Wrote Lambda functions in C# for scheduled data transformation jobs, leveraging CloudWatch Events for triggers.
- Participated in weekly architecture reviews, contributing ideas on design patterns and code refactoring strategies.
- Reduced code duplication by implementing shared .NET libraries used across six internal services.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
 - ❖ AWS Certified Solutions Architect – Associate
 - ❖ Google Cloud Digital Leader
 - ❖ Microsoft Certified: Azure Fundamentals
 - ❖ PostgreSQL for Developers (Udemy)
 - ❖ Designing and Implementing Microservices (Pluralsight)
-

PROJECTS

✓ **CloudOps Dashboard**

Built a real-time operational dashboard using React, AWS Lambda, DynamoDB, and CloudWatch for monitoring ECS cluster activity.

✓ **VulnTracker**

Developed a Python-based microservice for managing CVE feeds and alerts, integrating with Slack and PagerDuty.

✓ **Smart Campaign Engine**

Engineered a marketing automation platform in .NET Core and PostgreSQL that processed 2M+ messages per month via AWS SNS/SQS.
