

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Senior Software Engineer with over 9 years of hands-on experience designing, building, and deploying scalable backend solutions across enterprise-level platforms. Specialized in JVM-based development (Java, Kotlin), cloud-native architecture on AWS, container orchestration with Kubernetes, and distributed event-driven systems. Proven ability to take ownership of backend services from architectural planning through to production deployment. Adept at collaborating with cross-functional teams to deliver high-performing systems serving tens of thousands of users. Passionate about code quality, automation, and building resilient systems.

TECHNICAL SKILLS

- **Languages:** Java, Kotlin, Scala, Python, JavaScript
- **Frameworks:** Spring Boot, Micronaut, Vert.x, Hibernate, Node.js
- **Cloud Platforms:** AWS (EC2, RDS, SQS, Lambda, IAM, ECS), Azure
- **Infrastructure & Tools:** Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Helm, Prometheus, Grafana
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Cassandra
- **Architecture:** Microservices, Event-Driven Architecture, RESTful APIs, Serverless, Domain-Driven Design
- **Testing & QA:** JUnit, Mockito, TestContainers, Postman, Selenium
- **CI/CD:** GitLab CI, Jenkins, CircleCI, ArgoCD

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented microservices using Spring Boot and Kotlin, serving high-traffic SaaS applications used by enterprise customers across Europe.
- Migrated legacy monolith systems to a cloud-native architecture on AWS using ECS, SQS, RDS, and S3, achieving a 45% reduction in deployment times and improved scalability.
- Developed and maintained event-driven pipelines using Kafka and AWS SNS/SQS to process real-time data streams with high throughput and low latency.
- Led the implementation of Kubernetes on AWS (EKS) to orchestrate services, automate deployments, and improve container lifecycle management.
- Designed and deployed scalable infrastructure using Terraform and Helm, ensuring consistent environments and reducing manual provisioning efforts.

- Collaborated with product managers and DevOps engineers to define SLAs, establish alerting via Prometheus/Grafana, and improve system uptime.
- Conducted architectural reviews and mentored junior developers on backend principles, code structure, and JVM performance tuning.
- Created automated integration and regression testing pipelines to ensure end-to-end quality and detect regressions early during development sprints.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built scalable backend APIs in Java with Spring Boot and deployed them on AWS, improving response time for core services by 35%.
- Implemented event-driven communication using Apache Kafka, supporting loosely coupled services and increasing system resiliency.
- Containerized services with Docker and deployed to Kubernetes clusters, reducing deployment errors and enabling blue/green deployments.
- Integrated AWS SQS and SNS for asynchronous processing, improving reliability of business-critical notifications and workflows.
- Established CI/CD pipelines using Jenkins and GitLab CI, significantly reducing release cycle time and increasing developer productivity.
- Refactored existing services into domain-driven microservices, reducing technical debt and improving maintainability.
- Conducted load testing using JMeter and Gatling to ensure scalability and performance under high concurrency scenarios.
- Partnered with front-end teams to optimize RESTful API contracts, resulting in smoother client integrations and faster delivery cycles.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed core backend features in Java and maintained REST APIs for a customer engagement platform serving over 50K daily users.
- Used AWS Lambda and DynamoDB to build cost-efficient serverless modules that processed user analytics in real-time.
- Created CI/CD pipelines with Jenkins and automated infrastructure with Terraform to streamline deployment and improve release frequency.
- Led backend integration of third-party payment providers with custom webhook processing via Kafka event streams.
- Implemented distributed tracing and centralized logging using ELK stack and OpenTelemetry to debug production issues quickly.
- Participated in architecture planning sessions and advocated for event-driven patterns to decouple services and improve throughput.
- Optimized PostgreSQL queries and created custom indexes that improved query performance by over 50%.
- Designed RBAC and fine-grained permissioning in IAM across multiple environments for secure role-based access.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Developed backend services in Java for a multi-tenant SaaS application hosted on AWS.
- Introduced asynchronous job handling via RabbitMQ to improve API responsiveness under load.
- Deployed and maintained Dockerized services in development and test environments, ensuring consistency across teams.
- Collaborated with QA engineers to build automated integration test suites, reducing manual testing efforts.
- Documented APIs using Swagger/OpenAPI and assisted in versioning strategy to support multiple client versions.
- Conducted code reviews and enforced clean code principles across the backend team.
- Contributed to database schema design and optimized joins and indexing strategies for performance.
- Used Git Flow practices and PR-based workflows to maintain code quality and streamline team contributions.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in building internal tools in Java and Node.js for automation of administrative processes.
- Participated in refactoring legacy systems to RESTful APIs and integrated JWT-based authentication.
- Wrote test cases using JUnit and Mockito, increasing code coverage and ensuring application reliability.
- Developed small scripts to automate deployment tasks and assisted DevOps in routine CI/CD activities.
- Researched best practices for containerization and created initial Docker configurations for local dev.
- Attended sprint ceremonies and contributed to estimation, story writing, and demo sessions.
- Analyzed log data to identify recurring errors and proposed backend improvements to reduce noise.
- Gained exposure to agile processes and backend architecture principles in a real-world development setting.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Solutions Architect – Associate
- ❖ Certified Kubernetes Application Developer (CKAD)
- ❖ Java SE 11 Developer Certification (Oracle)

PROJECTS

- ✓ **Event-Driven Data Platform for Enterprise Workforce Analytics**
Led the design and development of a platform using Java, Kafka, and AWS to aggregate, process, and visualize employee data in real-time for clients with 10K+ users.
- ✓ **Kubernetes Migration and Cloud Cost Optimization**
Re-architected a monolithic service to microservices and deployed to AWS EKS using Terraform and Helm, resulting in 60% infra cost savings and improved fault isolation.
- ✓ **Real-Time Notification Microservice with AWS SQS & SNS**
Built a modular microservice in Kotlin to handle high-volume transactional notifications using AWS SQS and SNS, reducing delivery latency by 70%.
