PROFESSIONAL SUMMARY

Experienced and versatile Full Stack Developer with over 10 years of hands-on experience designing and developing scalable web applications and microservices using Java (Spring Boot), Angular (v8+), and modern DevOps tools such as Docker and CI/CD pipelines. Proven expertise in backend API design, frontend UI development, relational databases, and containerized deployments. Adept at mentoring junior developers and driving technical decisions in collaborative agile environments. Passionate about writing clean, maintainable code and delivering high-quality software solutions.

TECHNICAL SKILLS

- **Languages:** Java, TypeScript, JavaScript, HTML5, SCSS, SQL, Bash
- **Frameworks/Libraries:** Spring Boot, Angular 8+, RxJS, REST API, Hibernate, JPA, Express.js
- **DevOps & Tools:** Docker, Jenkins, GitLab CI/CD, SonarQube, Kubernetes (basic), Maven, Postman
- **Databases:** PostgreSQL, MySQL, Oracle, MongoDB
- **Testing:** JUnit, Jasmine, Karma, Mockito, TDD, E2E Testing
- **Other:** Agile/Scrum, Jira, Git, Bitbucket, Figma, Swagger/OpenAPI

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led the design and implementation of Spring Boot microservices that handled critical business logic for a large-scale enterprise solution, integrating with PostgreSQL and Oracle backends through JPA and native SQL queries.
- Developed and maintained a modular Angular 12+ frontend application with extensive use of RxJS and component-driven architecture, delivering responsive UI experiences.
- Created Dockerized environments for development, staging, and production, improving build reproducibility and deployment consistency across multiple platforms.
- Collaborated in a DevOps team to implement CI/CD pipelines using GitLab CI and Docker, reducing deployment times by over 60% and improving deployment reliability.
- Designed RESTful APIs consumed by both internal microservices and external B2B partners, adhering to OpenAPI specifications and applying best practices for authentication and data validation.

- Conducted performance tuning on PostgreSQL queries and Hibernate mappings, significantly improving backend response times and reducing database load.
- Acted as mentor to three junior developers, guiding them through code reviews, architectural discussions, and hands-on pair programming sessions.
- Facilitated Agile ceremonies and led daily standups, sprint planning, and retrospectives, contributing to a high-performing, self-organized Scrum team.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Built end-to-end enterprise applications using Angular 9+ on the frontend and Spring Boot for the backend, managing complex data flows across microservices.
- Designed relational database schemas and optimized SQL queries across MySQL and PostgreSQL for high-traffic applications with millions of records.
- Integrated third-party services using REST and SOAP APIs, including authentication modules, marketing platforms, and CRM systems, maintaining security and performance.
- Introduced Docker Compose-based local development environments, enhancing onboarding speed for new developers and ensuring consistent configurations.
- Participated in architectural decisions to decompose monolithic services into microservices, supporting scalability and independent deployment cycles.
- Created reusable Angular modules and form components to standardize UI development across multiple projects, improving code reusability and maintainability.
- Wrote comprehensive unit tests and end-to-end tests with JUnit, Jasmine, and Karma, supporting TDD practices and increasing test coverage by over 85%.
- Documented system architecture, APIs, and deployment processes to support maintainability and facilitate knowledge transfer within the team.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Contributed to the development of a large-scale Angular-based web portal with RESTful backend APIs using Spring MVC and Spring Boot, deployed on Tomcat servers.
- Created modular frontend code with Angular CLI and implemented custom directives and pipes for dynamic rendering and data transformation.
- Designed batch processing modules using Spring Batch and Hibernate for data imports and scheduled background tasks.
- Collaborated closely with UI/UX designers to implement responsive, cross-browser-compatible web components and layouts.
- Integrated Google Maps APIs and custom dashboards to visualize geolocation data within a fleet management solution.
- Developed custom authentication and role-based authorization logic using Spring Security and JWT tokens.
- Automated deployment pipelines using Jenkins and Maven, improving deployment efficiency and reducing manual errors.
- Refactored legacy modules to adopt a microservices-first architecture, ensuring modularity and faster development cycles.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Built RESTful APIs in Spring Boot and managed complex business workflows in a financial transaction processing system.
- Implemented AngularJS components to support real-time updates and notification systems via WebSocket integration.
- Wrote database migration scripts for MySQL and PostgreSQL, ensuring seamless transitions across production environments.
- Developed custom form builders and dynamic table components for admin-facing dashboards with configurable controls.
- Created Dockerized environments for staging and testing purposes, aligning with early DevOps adoption in the company.
- Provided code-level optimizations to reduce memory usage and improve API response times in critical modules.
- Collaborated in sprint planning and estimation sessions, contributing to accurate forecasting and workload distribution.
- Delivered technical documentation for new features and ensured 100% code coverage on critical business logic modules.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Participated in the development of internal admin tools using AngularJS and Java Spring MVC for workflow automation.
- Designed relational data models in MySQL and implemented secure CRUD operations using DAO layers and service patterns.
- Assisted in developing dynamic UI components and custom filters for data visualization using Highcharts and Angular.
- Implemented unit tests for backend logic using JUnit and Mockito, improving code reliability and regression coverage.
- Contributed to the implementation of a modular REST API gateway for centralizing service access and logging.
- Collaborated with senior developers in code reviews, sprint retrospectives, and backlog grooming sessions.
- Supported the migration of an older PHP-based system to a Java/Angular-based tech stack, streamlining code maintainability.
- Created developer guides and onboarding documentation for junior team members and new interns.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Oracle Certified Professional: Java SE 11 Developer**
 - ❖ **Spring Professional Certification – Pivotal**
 - ❖ **Docker Certified Associate – Mirantis**
 - ❖ **Angular Advanced Workshop – Udemy Certified**
 - ❖ **PostgreSQL for Developers – LinkedIn Learning**
-

PROJECTS

- ✓ **Fleet Manager Microservices Architecture:** Designed a full-stack logistics system with Spring Boot services and Angular frontend. Dockerized microservices orchestrated via Docker Compose, featuring PostgreSQL and Redis integrations.
- ✓ **Marketing CRM Platform:** Developed an enterprise CRM tool integrating REST APIs with external marketing services, featuring Angular dashboard, Docker deployment, and role-based access.
- ✓ **DevOps Dashboard:** Built a CI/CD insights dashboard using Spring Boot, Angular, and Jenkins API, offering real-time job stats and container health monitoring.
