

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced and independent Senior Java Backend Developer with over 9 years of expertise in designing and implementing scalable, secure, and high-performance backend systems across enterprise and government sectors. Proven ability to lead backend module development, modernize legacy systems, and collaborate with cross-functional teams including architects and analysts. Strong background in Spring ecosystem, microservices architecture, containerization with Docker/Kubernetes, and RESTful APIs. Fluent in English and experienced in remote work across international teams.

TECHNICAL SKILLS

- Languages: Java, SQL
- Frameworks: Spring Boot, Spring Data JPA, Spring REST, JUnit
- Databases: PostgreSQL, DB2, MySQL
- Tools: Git, Maven, Swagger/OpenAPI, Jenkins
- DevOps & Deployment: Docker, Kubernetes, OpenShift
- Architecture: Microservices, RESTful services
- Other: Agile/Scrum, CI/CD, TDD, Jira

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Developed modular backend services using Java and Spring Boot, leading multiple components in a government digitization platform for financial and administrative data processing.
- Engineered and maintained REST APIs consumed by financial institutions and government portals, ensuring strong validation, error handling, and backward compatibility.
- Introduced Swagger/OpenAPI documentation for all internal and external API endpoints, enabling seamless third-party integration.
- Migrated monolithic components to microservices with Spring Cloud, improving scalability and fault isolation in production environments.
- Integrated PostgreSQL and DB2 databases via Spring Data JPA, designing optimized queries for data-heavy modules accessed by thousands of daily users.
- Deployed containerized services using Docker and managed orchestration using Kubernetes and OpenShift for seamless CI/CD pipeline integration.

- Conducted rigorous unit and integration testing with JUnit and Mockito, achieving over 85% code coverage on critical modules.
- Collaborated with architects and analysts to translate functional requirements into detailed system design specifications and technical tasks.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Designed independent Java modules within an enterprise marketing automation system using Spring Boot and REST API structure.
- Implemented secure authentication and authorization mechanisms using JWT, improving overall system security posture for government campaign data.
- Built reusable Spring Data repositories and custom native queries to handle large-scale relational data across PostgreSQL and DB2.
- Developed Docker-based development environments and production containers for backend services, ensuring consistent deployment workflows.
- Integrated APIs with financial and advertising tools, documenting endpoints with Swagger for efficient cross-team communication.
- Refactored legacy code to adopt microservice architecture, significantly reducing load time and simplifying horizontal scaling.
- Implemented CI/CD pipelines using Git and Jenkins to automate build, test, and deployment processes across environments.
- Supported the full lifecycle from development to production deployment, handling rollback and patching strategies in coordination with QA and DevOps.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Participated in developing backend logic for an administrative case tracking platform for regional legal institutions.
- Built and optimized relational database schemas and stored procedures for DB2, ensuring high availability and fast data retrieval.
- Implemented modular Java Spring services with REST endpoints used in citizen interaction platforms.
- Enabled container-based deployment using Docker, reducing manual deployment errors and enabling version rollback.
- Participated in daily Agile ceremonies, providing estimations, technical inputs, and peer code reviews.
- Maintained RESTful services and integrated logging and monitoring using ELK stack for production observability.
- Developed role-based access controls and integrated third-party security tools to ensure compliance with GDPR and regional data laws.
- Participated in architectural meetings, helping shape a scalable design for backend modules.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built backend services in Java for a digital court document processing system using Spring Boot and JPA.
- Integrated government APIs for document verification, status updates, and metadata indexing in PostgreSQL.
- Supported legacy migration from older platforms into a REST-compliant, modular architecture.
- Contributed to data modeling for court-specific workflows and citizen communication interfaces.
- Maintained robust version control practices using Git and enforced peer review policy to maintain code quality.
- Participated in full testing lifecycle using JUnit and Postman for API verification.
- Designed error-resilient middleware to interface securely with external financial reporting tools.
- Supported QA automation efforts by mocking API responses and generating sample datasets for UI teams.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted senior developers with Java-based backend tasks, gaining hands-on experience in Spring Framework and RESTful APIs.
- Contributed to a university information system module that streamlined student administrative workflows.
- Wrote unit test cases for backend validation logic and API contracts using JUnit.
- Supported PostgreSQL schema updates and version tracking under supervision.
- Documented internal APIs and data flow diagrams, improving onboarding for junior team members.
- Participated in cross-functional discussions and team planning meetings.
- Developed user authentication microservice prototype integrating LDAP.
- Learned containerization fundamentals with Docker through team-led training.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Oracle Certified Professional: Java SE 11 Developer
- ❖ Certified Kubernetes Application Developer (CKAD)
- ❖ Docker Certified Associate
- ❖ Spring Professional Certification by Pivotal

PROJECTS

- ✓ **Digital Insolvency Case Management System (2023)**
Developed Java backend modules using Spring Boot, integrated PostgreSQL and REST APIs for

insolvency data exchange between courts, financial institutions, and the Ministry. Used Docker/Kubernetes for scalable deployment.

✓ **eJustice Workflow Engine (2022)**

Built a microservice responsible for handling judicial workflow tasks. Integrated with national identity verification API, ensured robust error handling, and enabled multi-tenant deployment with OpenShift.

✓ **Government Notification Hub (2021)**

Implemented asynchronous job processing using Spring Batch to deliver status change notifications to subscribed entities. Created Swagger UI for third-party integrations.
