

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Java Developer with over 9 years of experience designing and implementing scalable enterprise solutions using Java/J2EE, RESTful APIs, Spring ecosystem, PL/SQL, and modern cloud-native tools. Proven record of delivering mission-critical financial and data systems by owning backend modules and integrating CI/CD, automation, and containerization into development pipelines. Seeking to bring hands-on leadership and deep architectural insight to a product-oriented Java team in a fast-paced Agile environment.

TECHNICAL SKILLS

- **Languages & Backend:** Java, J2EE, Spring Boot, RESTful APIs, Node.js, PL/SQL, SQL, Hibernate, JDBC
- **Frontend:** Angular, HTML5, JavaScript, JSP, Thymeleaf
- **Databases:** Oracle 11g, PostgreSQL, MySQL, SQL Server
- **Cloud & DevOps:** AWS (EC2, S3, RDS), Docker, Jenkins, Git, GitHub Actions, Maven, Gradle
- **Tools & Practices:** Agile (SCRUM), CI/CD, Object-Oriented Design, Design Patterns, JIRA, Confluence, TDD
- **Frameworks & Libraries:** Spring Security, Spring MVC, Spring Data JPA, Hibernate, JSON/XML, Jackson

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Designed and developed RESTful APIs for internal microservices using Java 11, Spring Boot, and Hibernate that reduced processing time for large financial reports by over 40%.
- Implemented complex PL/SQL procedures and Oracle queries for analytics modules, drastically improving runtime performance for transaction-heavy operations.
- Migrated multiple monolithic applications into containerized microservices deployed in Docker and orchestrated in AWS ECS, increasing scalability and deployment reliability.
- Created CI/CD pipelines using Jenkins and GitHub Actions, integrating unit testing and SonarQube checks to ensure code quality and reduce regression bugs by 60%.
- Collaborated with cross-functional teams including analysts and product leads to translate business logic into resilient enterprise backend architecture.
- Integrated security mechanisms into API layers using Spring Security and JWT, achieving GDPR-compliant access control and audit tracking.
- Conducted system profiling and memory leak analysis using JVisualVM and JConsole, resolving multiple long-standing performance bottlenecks.

- Led migration from legacy SOAP services to REST-based microservices for client-facing modules, reducing latency and simplifying integration layers.
- Introduced code standardization and modularization across modules using design patterns (Factory, Singleton, Adapter), reducing maintenance costs.
- Delivered end-to-end modules for real-time transaction monitoring for capital market applications using Kafka for message streaming.
- Spearheaded sprint planning and refinement sessions in a SCRUM team of 6 developers, ensuring continuous backlog grooming and velocity tracking.
- Mentored junior developers and code-reviewed over 200 pull requests to maintain high-quality, performant Java codebases across services.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Engineered backend components for web and mobile platforms using Java 8, Spring Boot, and MySQL that scaled to handle 100,000+ monthly users.
- Developed and optimized data ingestion pipelines using Spring Batch for processing CRM analytics, improving batch performance by 3x.
- Built secure REST APIs with Swagger documentation and integrated with Angular-based frontends for marketing automation dashboards.
- Wrote complex joins, indexes, and stored procedures in PL/SQL to support customer segmentation, reducing query times by 50%.
- Used Jenkins for CI/CD and introduced Docker containers for integration testing environments, shortening release cycles.
- Designed scalable data models and schema migration scripts for analytics warehousing using Liquibase with versioned tracking.
- Maintained API contracts and mock services to improve frontend-backend decoupling, speeding up parallel team development.
- Converted legacy Java EE code to modern Spring Boot-based services, simplifying codebases and reducing memory footprint.
- Refactored authentication systems to use token-based OAuth2, improving client session security and reducing support tickets.
- Supported load testing using JMeter for pre-release performance audits to ensure SLA adherence on backend endpoints.
- Worked closely with SQA teams to enforce 90%+ test coverage via JUnit and Mockito for all new modules.
- Participated in quarterly architectural reviews and contributed to tech stack decisions for backend modernization.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed scalable modules in Java EE for enterprise resource planning (ERP) systems covering finance, HR, and logistics domains.
- Built REST APIs that served web clients and third-party integrations with custom token authentication, enabling secure external system access.
- Tuned PL/SQL queries for payroll and accounting modules, optimizing data fetch and reducing scheduled job runtime from 1 hour to 15 minutes.
- Migrated reporting engine from JasperReports to custom-built HTML5 dashboards with PDF/Excel export support.

- Led deployment strategy across environments using Maven, ensuring consistent versioning and dependency resolution.
- Collaborated with QA engineers to develop Selenium test cases for core workflows, supporting full regression automation.
- Designed object models and DAO layers using Spring Data JPA with clean separation of concerns and reusable repositories.
- Engaged with business analysts to map functional requirements into technical specifications across multiple modules.
- Performed monthly log audits and implemented centralized logging with Log4j and ELK stack to improve traceability.
- Refactored user access control logic to use role-based security mapped to organizational hierarchies.
- Integrated third-party payment APIs and ensured compliance with PCI-DSS guidelines.
- Assisted in organizing Agile sprints, retrospectives, and demos to drive iterative delivery with stakeholders.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Contributed to internal CMS and eCommerce platform development using Java, JSP, and MySQL.
- Developed admin panel features for product and user management using Spring MVC and jQuery.
- Enhanced SQL queries and added database indexing for catalog browsing improvements.
- Created cron-based scheduler services in Java to handle inventory and pricing updates.
- Supported deployment and staging setup using Bash scripts and Tomcat configurations.
- Implemented basic integration with payment gateways and external shipping APIs.
- Participated in daily stand-ups and tracked tasks via Redmine-based Agile boards.
- Wrote internal documentation and onboarding wiki pages for faster team ramp-up.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Built REST APIs in Java and basic CRUD services using JDBC for internal tools.
- Wrote frontend components using HTML, CSS, and basic JavaScript for UI panels.
- Learned and implemented OOP principles through hands-on training sessions and code reviews.
- Documented software architecture and wrote unit tests with JUnit under mentorship.
- Assisted in debugging production issues and writing shell scripts for data sync.
- Delivered working prototypes of internal workflow automation tools.
- Maintained code versioning and branching using Git.
- Participated in peer reviews and weekly sprint planning meetings.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Oracle Certified Professional: Java SE 11 Developer
 - ❖ AWS Certified Developer – Associate
 - ❖ Spring Professional Certification – Spring Framework Core
-

PROJECTS

- ✓ **Financial Reporting Engine**
Built a modular backend engine using Java, PL/SQL, and Spring Boot that automated monthly financial reports across regions and supported dynamic currency conversion and analytics.
- ✓ **Microservices for Capital Markets Platform**
Developed Java-based microservices integrated with Kafka and Oracle DB for real-time trading data ingestion, risk analytics, and alerting—replacing legacy monoliths with zero downtime.
- ✓ **Internal API Gateway Migration**
Led a team to migrate API contracts to a Spring Cloud Gateway setup with centralized authentication and throttling, improving security and reducing dependency errors across services.
