

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Android Developer with 8+ years of experience designing and building scalable cross-platform mobile applications using Java, Kotlin, RxJava, and Netty. Skilled in optimizing UX, implementing real-time communications with Websockets and Protobuf, and adhering to modern architectural patterns. Eager to join a dynamic UX-focused team delivering high-impact mobile solutions across Android and iOS platforms.

TECHNICAL SKILLS

- **Languages:** Java 11, Kotlin, TypeScript, JavaScript
- **Android Frameworks:** Android SDK, Jetpack, RxJava 3, LiveData, ViewModel, Retrofit, Dagger/Hilt
- **Architecture & Patterns:** MVVM, MVP, Clean Architecture, Repository Pattern, SOLID Principles, OOP
- **Tools & Platforms:** Android Studio, Firebase, Git, JIRA, Jenkins, WebSocket, Protobuf, Mockk, Netty
- **Testing:** Espresso, Mockito, JUnit, Robolectric, UIAutomator
- **Databases:** SQLite, Room, Realm, SharedPreferences
- **API Integration:** RESTful APIs, gRPC, third-party SDKs
- **CI/CD & Cloud:** GitHub Actions, Bitrise, Firebase CI, Google Play Console
- **Other:** JSON, XML, GraphQL, Figma Integration

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Developed a high-availability cross-platform taxi booking system using shared business logic in Java and platform-specific Android modules.
- Designed complex UI flows and implemented platform-dependent components for Android using Kotlin and Android Jetpack libraries.
- Integrated real-time communication features via WebSocket protocol, backed by a Netty server and structured with Protobuf messages for efficiency.

- Refactored monolithic Android codebase into modular components following Clean Architecture and MVVM design pattern for better scalability.
- Leveraged RxJava 3 to handle reactive UI updates and asynchronous network requests, improving responsiveness across various screen sizes.
- Collaborated closely with iOS developers to align shared logic integration using Kotlin Multiplatform Mobile and ensure API compatibility.
- Led unit and UI test automation efforts with Mockk and Espresso to achieve 90% code coverage, identifying regressions early in CI pipelines.
- Participated in architectural reviews, influencing adoption of Kotlin DSLs, improved dependency injection with Hilt, and Gradle build optimizations.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Delivered Android-first mobile advertising applications with real-time campaign tracking powered by Java-based backends and local data caching with Room.
- Implemented multiple screen adaptations for tablets and custom hardware using constraint-based responsive layouts and resource qualifiers.
- Designed modular REST API integrations with Retrofit, enabling fast rollout of dynamic content changes with zero downtime deployments.
- Pioneered Kotlin migration of legacy codebases, leading efforts to replace Java AsyncTasks with structured concurrency and coroutines.
- Optimized app launch time and background sync efficiency, cutting cold start by 40% through lifecycle-aware components and RxJava streams.
- Conducted in-depth profiling using Android Profiler and LeakCanary to detect memory leaks and improve frame rendering times across low-end devices.
- Implemented secure app data encryption with Android Keystore and obfuscation with Proguard and R8, meeting enterprise compliance standards.
- Integrated third-party analytics SDKs including Firebase, Adjust, and Mixpanel to monitor user behavior and improve engagement KPIs.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed e-commerce and logistics apps with integrated geolocation and order tracking modules using Google Maps SDK and Android Location APIs.
- Led development of a reusable core Java library for Android and iOS cross-platform logic, promoting consistent business rule application.
- Used Protobuf to serialize data exchanged between mobile apps and backend, significantly reducing payload size and improving API performance.
- Maintained rigorous test standards with JUnit and Mockito, enforcing TDD practices and peer-reviewed PRs to ensure defect-free releases.
- Upgraded backend communication stack to use gRPC over Netty, introducing streaming responses to reduce client polling and latency.
- Coordinated deployments using CI/CD pipelines with Bitrise and GitHub Actions, automating tests, builds, and Google Play submissions.
- Worked with Figma-based design specifications to build pixel-perfect UIs and ensured accessibility standards were met across all flows.

- Implemented dynamic configuration loading with Firebase Remote Config, allowing runtime control over features and AB test variables.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Built Android app components from scratch using Java and Material Design guidelines to enable user interaction with IoT devices over Bluetooth.
- Designed custom widgets and extended Android views for better user control over real-time telemetry data feeds.
- Wrote core modules that connected to local SQLite storage for offline-first app behavior and later synchronized data with remote servers.
- Created background services for periodic Bluetooth scanning, and managed power efficiency using AlarmManager and JobScheduler APIs.
- Conducted UX audits and improved app navigation structure for more intuitive flows, which reduced support tickets by 25%.
- Developed in-app tutorials and guided tooltips to enhance onboarding, utilizing dynamic layouts and animation libraries.
- Wrote comprehensive integration test suites simulating hardware responses for continuous Bluetooth reliability testing.
- Documented API contract changes and contributed to internal Wiki on platform-specific Android nuances and best practices.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in developing Android prototypes for early-stage products using Java, helping product owners validate ideas rapidly.
- Created interactive UIs with Fragment navigation, enabling modularity in onboarding and tutorial sections.
- Integrated barcode scanning libraries and developed a mini inventory tracking feature for internal warehouse use.
- Participated in weekly sprint planning and grooming, gaining firsthand experience in agile development and cross-team collaboration.
- Conducted compatibility testing for Android KitKat to Lollipop, identifying API behavior changes and regression issues.
- Learned to configure Gradle builds and dependency management while assisting senior devs on legacy code upgrades.
- Created tools for log monitoring and crash reporting integration using Crashlytics and Google Play Developer Console.
- Designed and tested multilingual support, contributing to improved app accessibility for Eastern European markets.

EDUCATION

Tallinn University

CERTIFICATIONS

- ❖ Android Development with Kotlin – JetBrains Academy (2023)
 - ❖ Reactive Programming in Java with RxJava – Udemy (2022)
 - ❖ Advanced Android Architecture – Coursera (2021)
-

PROJECTS

Cross-Platform Ride Booking Platform (Sensidev)

- Engineered the shared core in Java used across Android and iOS clients; implemented advanced booking flows, real-time driver tracking, and push notification logic with Firebase and Websockets.

Mobile Campaign Manager (Syscom Digital)

- Built Android apps for real-time marketing campaign control, with support for offline syncing, media uploads, and time-based scheduling. Used Kotlin, Room, and Retrofit.

Fleet Management System (Soft Build)

- Developed Android application for logistics control and driver performance tracking. Integrated geolocation, trip logs, and WebSocket-based dispatch updates.
