

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced and versatile Senior Software Engineer with 8+ years of progressive experience designing, building, and optimizing scalable backend systems and microservices in cloud-native environments. Adept in Java, Kotlin, Spring Boot, gRPC, RESTful APIs, and cloud platforms like AWS. Proven expertise in leading engineering initiatives, driving CI/CD best practices, and mentoring development teams to high performance. Known for delivering robust and efficient software solutions in high-load distributed systems.

TECHNICAL SKILLS

- Languages: Java, Kotlin, Python, JavaScript
- Frameworks: Spring Boot, Ktor, FastAPI, Express.js
- API Protocols: REST, gRPC, SOAP
- Databases: MariaDB, PostgreSQL, MongoDB, Redis
- DevOps: Docker, Kubernetes (K8s), ArgoCD, GitHub Actions, dbMate
- Cloud: AWS (EKS, ECR, S3, RDS), DigitalOcean, Azure (basic)
- Monitoring: Prometheus, Grafana, ELK Stack, OpenTelemetry
- Tools: JIRA, Confluence, Git, Slack
- Practices: TDD, BDD, CI/CD, Agile/Scrum

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Developed microservices in Kotlin and Spring Boot integrated with gRPC APIs, ensuring scalable performance across distributed systems in a cloud-native environment using AWS EKS.
- Led the migration of legacy REST APIs to modern gRPC endpoints, reducing API response times by over 30% and improving service reliability.
- Implemented observability tools using Prometheus, Grafana, and OpenTelemetry, resulting in real-time performance insights and 40% faster incident resolution.
- Mentored junior engineers on Kotlin programming, TDD practices, and microservices architecture, improving team delivery metrics and reducing bug rates.
- Designed and deployed containerized applications with Kubernetes and Docker, using GitHub Actions and ArgoCD for seamless CI/CD integration.
- Integrated Redis caching strategies across high-traffic endpoints, enhancing data retrieval speeds and minimizing database load under concurrent operations.
- Collaborated with stakeholders to gather business requirements and translate them into scalable backend architectures using domain-driven design.

- Played a key role in architecture planning sessions, delivering recommendations that improved system reliability and simplified service orchestration across AWS.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built robust backend systems using Java 11, Spring Boot, and MariaDB to support marketing campaign automation tools for enterprise clients.
- Developed RESTful APIs and ensured API documentation using Swagger/OpenAPI, increasing frontend integration efficiency and reducing development time.
- Collaborated with DevOps engineers to containerize applications and implement CI pipelines using Jenkins and GitHub Actions for consistent deployments.
- Led feature development on campaign reporting tools, integrating complex queries and data processing tasks optimized for performance and reliability.
- Implemented automated test suites with JUnit and Mockito, achieving 85% code coverage and significantly reducing regression bugs.
- Integrated Redis as a message store for real-time analytics dashboards, improving UI responsiveness and reducing polling latency.
- Participated in daily Agile standups and sprint planning, ensuring clear progress tracking and effective stakeholder communication.
- Designed and monitored health checks and alerting using ELK and Prometheus stack, enabling proactive monitoring of production systems.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed backend services for real estate management platforms using Java and Spring Boot, supporting features such as property listings, user authentication, and payments.
- Created modular APIs supporting internal and third-party integrations, following RESTful standards and OAuth 2.0 authentication protocols.
- Improved database efficiency by redesigning indexing strategies and optimizing SQL queries in PostgreSQL, leading to a 25% performance gain.
- Managed deployment automation through Docker Compose and GitLab CI, enabling continuous integration and reducing manual intervention.
- Contributed to application logging and monitoring using the ELK stack, enabling better root cause analysis during incident postmortems.
- Participated in cross-functional team code reviews and pair programming sessions, fostering a culture of shared knowledge and code quality.
- Worked closely with QA engineers to write comprehensive integration and system tests for robust release cycles.
- Documented API contracts and deployment processes to ensure smooth handovers and reliable environment replication.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Built e-commerce modules using JavaScript and Node.js with Express, integrating with payment gateways and inventory management systems.

- Designed and implemented REST APIs to manage product listings and shopping cart workflows, following scalable microservice principles.
- Assisted in setting up CI/CD pipelines using Jenkins and Git for version control and build automation.
- Wrote unit and API tests with Mocha and Chai, enabling a culture of test-driven development and quality assurance.
- Integrated third-party APIs including currency converters and shipping calculators to enhance platform functionality.
- Collaborated with UI/UX designers to ensure seamless API support for responsive frontend designs.
- Performed routine refactors of legacy code to meet new security and performance benchmarks.
- Participated in weekly code reviews and sprint demos, maintaining development transparency with stakeholders.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Supported the backend development of a SaaS platform for logistics using Python and Flask, gaining early exposure to MVC and REST concepts.
- Wrote backend scripts to automate inventory updates and delivery schedules, reducing manual entry time by 50%.
- Assisted in writing MySQL queries for performance dashboards and management reports, used weekly by operations.
- Gained hands-on experience with Agile workflows, participating in daily scrums and sprint retrospectives.
- Helped migrate legacy scripts to more maintainable modular Python packages.
- Implemented basic user role management and session-based authentication flows.
- Created initial API documentation for internal developer use.
- Worked closely with senior developers on bug triage and production fixes.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Solutions Architect – Associate (2023)
- ❖ Java Programming and Software Engineering Fundamentals (Coursera – Duke University, 2022)
- ❖ Kubernetes for Developers (Udemy, 2023)
- ❖ Microservices with Spring Boot and Spring Cloud (Udemy, 2023)

PROJECTS

- ✓ **AutoCommerce Cloud Platform**
Led the backend development of a cloud-native e-commerce solution for automotive parts using

Kotlin and Spring Boot. Integrated gRPC and REST APIs, Redis caching, AWS EKS deployments, and Prometheus monitoring for a high-performance B2B platform used by garages and suppliers across Europe.

✓ **SmartCampaign Engine**

Developed a scalable marketing automation platform for enterprise users. Architected the campaign workflow engine in Java with event-driven processing, integrated Redis queues, and exposed a clean RESTful API for dashboard management.

✓ **RealtyCRM System**

Designed and implemented backend services for a CRM tailored to real estate brokers. Used PostgreSQL, Spring Boot, and Docker to deliver features like client tracking, lead generation, and appointment management.
