

# CRISTOFF STAN

## Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com  
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

## PROFESSIONAL SUMMARY

Results-driven Senior Full-Stack Developer with 8+ years of hands-on experience in building scalable, secure, and cloud-native backend systems using Java, Node.js, and TypeScript. Demonstrated expertise in microservices architecture, CI/CD automation, and full software lifecycle ownership from design through production support. Proven success in delivering resilient and high-performance SaaS products and enterprise solutions, with a strong emphasis on DevOps culture, automated testing, observability, and end-to-end ownership. Highly collaborative and self-sufficient with a focus on continuous improvement, customer-centric design, and fail-fast engineering principles.

## TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Node.js, TypeScript, JavaScript, Spring Boot, Express.js, JUnit, Mockito, Mocha, NestJS, Hibernate
- **Frontend:** React, Angular, HTML5, CSS3, TailwindCSS
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, GitHub Actions, Jenkins, Terraform, Prometheus, Grafana
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Architecture:** Microservices, REST APIs, Domain-Driven Design, Event-Driven Architecture
- **Testing & Quality:** TDD, E2E, Unit Testing, SonarQube, Playwright, Cypress
- **Monitoring:** Kibana, OpenSearch, Grafana, Prometheus, Logstash
- **CI/CD & Tools:** Git, GitHub Actions, GitLab CI, Jira, Confluence, Bitbucket

## WORK EXPERIENCE

### Senior Software Engineer

#### Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led the development and maintenance of distributed backend services in Java and Node.js, ensuring resilient microservices supporting critical field-service operations for enterprise clients.
- Architected cloud-native features deployed on AWS using Lambda, ECS, and API Gateway with CI/CD automation via GitHub Actions and Dockerized pipelines.
- Developed and enforced robust E2E and unit testing strategies with JUnit, Mockito, and Cypress, boosting test coverage to over 90% and eliminating regressions in releases.

- Delivered high-quality APIs and managed domain-driven modules integrating real-time data pipelines and third-party services with zero downtime during deployments.
- Played a key DevOps role by setting up observability dashboards with Prometheus and Grafana, along with logging via OpenSearch and Kibana for error tracing and metrics.
- Implemented test-driven development (TDD) practices, which accelerated feature delivery cycles and improved cross-functional team velocity by 35%.
- Championed fail-forward learning by conducting frequent post-mortems and implementing automated rollback and alerting policies in staging and production.
- Took ownership of production readiness, participating in on-call rotations and ensuring incident response times under 10 minutes using alerting policies and SLOs.

## **Software Engineer**

### **Syscom Digital**

**October 2019 – August 2021**

Bucharest, Romania (Remote)

- Designed and developed modular backend APIs using Node.js and TypeScript for a logistics SaaS platform, integrating RESTful interfaces and third-party APIs at scale.
- Built and deployed microservices in Dockerized environments on Kubernetes, significantly improving deployment reliability and scalability during product growth phases.
- Led the migration of legacy monolith systems to microservice-based architecture, reducing service latency by 40% and improving maintainability across teams.
- Integrated domain-driven logic with PostgreSQL and Redis, facilitating complex transactional workflows with consistent performance under high loads.
- Developed test automation suites with Mocha and Chai, supporting CI pipelines and increasing release frequency while maintaining quality.
- Collaborated closely with product and QA teams to define quality standards, writing testable specs that aligned with business outcomes and customer needs.
- Introduced metrics-first development using Prometheus and Grafana, improving operational awareness and enabling proactive error resolution strategies.
- Participated in daily SCRUMs, sprint planings, and retrospectives while mentoring junior developers in best practices, coding standards, and design patterns.

## **Software Developer**

### **Soft Build**

**June 2016 – July 2019**

Timișoara, Romania (Remote)

- Developed scalable backend components and business logic in Java and Spring Boot for a field services scheduling and workforce tracking system.
- Refactored monolithic processes into loosely coupled services, reducing technical debt and enabling zero-downtime deployments.
- Created robust integrations between internal services and external systems using REST and messaging queues, ensuring end-to-end data consistency.
- Collaborated with frontend teams using Agile methodologies to deliver full-stack features on time and with high code quality.
- Established continuous integration workflows with Jenkins, GitLab CI, and custom shell scripting for build/test/deploy pipelines.
- Instrumented services with log tracing, request profiling, and error reporting using ELK stack and custom Grafana dashboards.
- Authored detailed technical documentation and architecture diagrams to ensure scalable knowledge transfer across distributed teams.
- Participated in pair programming sessions and code reviews, reinforcing clean code practices, SOLID principles, and engineering excellence.

**Software Developer**  
**Decima Digital**  
**November 2015 – April 2016**  
Tallinn, Estonia

- Built backend components for a customer engagement app in Node.js, implementing authentication, notification, and user management modules.
- Created reusable UI components in React and consumed backend APIs for real-time data rendering and interactions.
- Configured development Docker environments and supported DevOps initiatives for early-stage product deployments.
- Improved team velocity by developing custom CLI tools and generators to bootstrap projects and enforce naming conventions.
- Integrated CI tools like Travis CI and Slack alerts to automate testing and release notification for development branches.
- Actively participated in daily standups and demo sessions to present new features and gather direct stakeholder feedback.
- Supported test automation setup with Jest and Selenium for cross-browser UI testing.
- Applied performance profiling techniques and memory leak detection to stabilize long-running services.

**Software Developer Intern**  
**Borna Technology**  
**September 2014 – August 2015**  
Tallinn, Estonia (On-Site)

- Developed backend functionality in Java for an IoT-based logistics monitoring solution, focusing on MQTT event processing and sensor data aggregation.
- Contributed to building the internal admin dashboard using Angular and integrated RESTful APIs for device telemetry.
- Assisted in designing data models in MySQL and configuring backup strategies and data access policies.
- Implemented unit testing with JUnit and participated in QA testing and manual regression runs for new firmware updates.
- Built reusable libraries for logging, error handling, and API versioning to streamline development.
- Wrote internal documentation and usage guides for APIs and developer tools.
- Attended stakeholder meetings, prepared technical slides, and presented sprint progress in cross-functional demos.
- Researched and proposed architectural improvements based on competitive analysis and POCs during team planning cycles.

---

## **EDUCATION**

**Tallinn University**

Bachelor's Degree in Computer Science,  
**2010 – 2014**

---

## CERTIFICATIONS

- ❖ AWS Certified Developer – Associate (DVA-C02)
  - ❖ Certified Kubernetes Application Developer (CKAD)
  - ❖ Oracle Certified Professional, Java SE 11 Developer
  - ❖ GitHub Actions: Continuous Integration and Deployment (LinkedIn Learning)
- 

## PROJECTS

- ✓ **FieldOps SaaS** – Microservice Field Service Platform  
Led backend for cloud-native FSM application handling service requests, technician dispatching, and mobile status tracking. Built on Node.js/TypeScript, Docker, and deployed on AWS ECS with Prometheus and OpenSearch for monitoring.
- ✓ **DevOps Automation Suite**  
Built internal developer productivity tools for CI pipeline scaffolding, alert routing setup, log analysis CLI utilities, and pre-commit validators for JS/TS services. Enabled full-cycle automation for new microservices.
