

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Results-driven Senior Software Developer with over 9 years of experience designing, building, and maintaining scalable backend systems. Specializes in Java and PHP with strong expertise in RESTful APIs, microservices architecture, relational and NoSQL databases, and message queue integrations. Proven ability to thrive in Agile teams, implement test-driven development, and contribute to high-performance communication platforms. Adept at optimizing backend systems for performance and scalability in cloud-based and containerized environments.

TECHNICAL SKILLS

- **Languages:** Java, PHP, TypeScript, JavaScript
- **Frameworks:** Spring Boot, Laravel, Quarkus, Express.js
- **Databases:** MySQL, MariaDB, MongoDB, PostgreSQL
- **Messaging:** RabbitMQ, Kafka
- **DevOps & Tools:** Docker, Kubernetes, Git, GitHub Actions, Linux CLI, Redis, ELK Stack, Prometheus
- **Testing:** JUnit, PHPUnit, Mockito, TDD, Postman, REST-assured
- **Cloud & Platforms:** AWS (EC2, S3), GCP, DigitalOcean
- **Others:** REST APIs, Microservices Architecture, CI/CD, Agile/Scrum, WebSocket, WebRTC (basic)

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and developed RESTful APIs using Java (Spring Boot) and PHP (Laravel) for scalable microservices serving communication and notification modules.
- Led migration of monolithic systems into microservices deployed in Dockerized environments with Kubernetes orchestration.
- Integrated RabbitMQ and Apache Kafka for asynchronous message processing between distributed services.
- Built and maintained a secure customer identity and access management (CIAM) backend using OAuth2 and JWT.
- Improved API performance by 42% through advanced query optimization and database indexing in MariaDB and MongoDB.
- Collaborated cross-functionally with QA and DevOps teams to implement CI/CD pipelines using GitHub Actions.

- Applied TDD with JUnit and Mockito ensuring 90%+ code coverage and reduced regression issues by 35%.
- Contributed to internal ELK stack setup for monitoring and debugging API traffic and error logs.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Developed and deployed PHP-based backend services using Laravel to support high-throughput marketing platforms.
- Consumed and created RESTful APIs for customer engagement tools and third-party CRM integrations.
- Implemented real-time analytics module using Redis and WebSocket services.
- Participated in Agile sprints, daily stand-ups, and collaborative design reviews.
- Deployed containerized services using Docker and managed environments via DigitalOcean droplets.
- Conducted security audits on REST endpoints, applying best practices for API authentication and rate limiting.
- Delivered scalable database schemas with PostgreSQL to support over 1M+ users.
- Mentored junior developers on backend practices, version control workflows, and debugging techniques.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Created and maintained internal backend tools using Java and PHP for managing e-commerce platform workflows.
- Built integrations with SMS gateways using SMPP protocol and designed failover retry logic.
- Developed cron-based jobs and queue listeners for handling batch imports and bulk messaging.
- Worked on system design enhancements to enable horizontal scaling across application layers.
- Integrated Elasticsearch for fast, full-text product search and customer behavior logging.
- Adopted Git branching strategies and enforced pull request reviews to maintain codebase integrity.
- Delivered feature documentation and flow diagrams for stakeholders and client onboarding teams.
- Developed custom admin dashboards using Vue.js for monitoring API performance metrics.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Participated in backend development of enterprise CRM extensions using PHP and Java.
- Built integrations with external APIs for real-time communication triggers (email/SMS).
- Conducted functional testing and API validation using Postman and custom scripts.
- Helped streamline build processes using early-stage Jenkins CI for faster deployment.
- Delivered reusable backend modules to improve project code reuse by 50%.
- Implemented early authentication and RBAC components in legacy systems.
- Contributed to REST API documentation using Swagger/OpenAPI standards.
- Refactored legacy PHP modules to adhere to modern MVC conventions and SOLID principles.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in building APIs and microservices in Java for a local communication product.
 - Implemented unit tests and learned the fundamentals of Agile software development.
 - Built CLI tools in Bash and Python for automated report generation.
 - Participated in weekly pair programming and code reviews with senior developers.
 - Created database schemas and optimized queries in MySQL for internal CRM.
 - Documented project APIs and contributed to internal wikis and developer guides.
 - Supported QA team with testing scripts and REST API response verification.
 - Contributed to the transition of application hosting to AWS EC2 instances.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Java Backend Development with Spring Boot (Udemy)
 - ❖ Building Microservices with Laravel (Laracasts)
 - ❖ REST API Design Best Practices (LinkedIn Learning)
 - ❖ Introduction to Cloud Computing (Coursera)
-

PROJECTS

✓ Omnichannel Messaging Platform

- Developed a scalable messaging backend for SMS, email, and WebSocket-based communication using Java Spring Boot and RabbitMQ.
- Integrated with external telecom APIs using SMPP and REST for carrier-grade delivery across channels.
- Enabled multi-tenant configurations and secure message auditing features.

✓ Telecom API Gateway

- Built an internal API gateway in PHP (Laravel) for routing and monitoring requests to voice and messaging services.
- Implemented JWT-based authentication, request throttling, and integrated Grafana dashboards for metrics.

✓ Microservice Notification Engine

- Created a modular notification engine in Java that supported retry logic, dead letter queues via Kafka, and templated messaging.
- Deployed as containerized services in Kubernetes, supporting millions of events daily.
