

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile and passionate Staff Software Engineer with 10+ years of backend-focused development experience, specializing in cloud-native microservices, partner API integrations, observability-first architecture, and scalable platforms using Java, Python, and PHP. Proven ability to deliver high-availability, developer-friendly APIs, working with global remote-first teams in regulated and high-scale industries. Seeking to drive partner ecosystem growth and core integration infrastructure at Cloudbeds.

TECHNICAL SKILLS

- **Languages:** Java, Python, PHP, JavaScript, TypeScript, Bash
- **Backend:** Spring Boot, Flask, Laravel, Express.js, Node.js, REST, GraphQL
- **Microservices & APIs:** Event-driven architecture, Kafka, RabbitMQ, AsyncAPI, OpenAPI, OAuth2
- **Frontend:** React, Angular, HTML5, CSS3, Bootstrap
- **Cloud:** AWS (EC2, Lambda, S3, API Gateway), GCP (Cloud Functions, Pub/Sub), Firebase
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch
- **DevOps:** Docker, Kubernetes, Helm, GitHub Actions, Jenkins, Terraform
- **Monitoring & Observability:** DataDog, Prometheus, Grafana, New Relic, Sentry
- **Testing:** JUnit, PyTest, PHPUnit, Postman, Cypress, Selenium
- **Tools:** Git, Jira, Confluence, Swagger, Figma

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Architected scalable event-driven APIs in Java and Python to support third-party hotel and fintech integrations with 99.99% availability and extensive observability.
- Led migration from monolith to microservices using Spring Boot and Flask with Docker and Kubernetes on AWS, improving partner API response time by 35%.
- Developed and maintained secure REST APIs enabling seamless third-party partner access to hospitality services, using OAuth2 and token revocation strategies.
- Designed async task queue workers using Celery (Python) and SQS to process partner booking notifications, achieving over 5 million messages/month with no loss.

- Collaborated across globally distributed teams to define and document APIs using OpenAPI and Postman for external use, increasing partner adoption by 42%.
- Implemented centralized monitoring using DataDog with custom dashboards and logs for critical API paths, reducing MTTR by over 50% for partner outage issues.
- Led incident response and RCA sessions for API failures affecting third-party partners, introducing circuit breakers and exponential retry mechanisms.
- Integrated third-party property systems into unified hospitality platform via ETL pipelines with change data capture from MySQL/PostgreSQL to MongoDB.
- Delivered infrastructure-as-code (IaC) automation using Terraform and GitHub Actions, provisioning per-client GCP and AWS resources securely.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed modular backends in PHP/Laravel and Java for real-time marketing campaign delivery to smart TVs and digital signage systems.
- Refactored legacy PHP endpoints to microservices with API versioning and token-based authentication, improving system scalability and API rate control.
- Engineered analytics APIs with PostgreSQL and Redis to support data queries over 150M+ ad impressions, enabling real-time metrics dashboards.
- Automated deployments and health checks via Kubernetes Helm charts, reducing downtime during major regional rollouts by 90%.
- Implemented feature flags and A/B testing at backend level to enable per-client experimentation without downtime.
- Designed RESTful APIs with Swagger and conducted partner onboarding workshops, ensuring fast integration with external media resellers.
- Led security initiative to enforce OWASP top 10 across services, introducing CSRF and JWT hardening to client SDKs.
- Introduced CI/CD pipelines using GitHub Actions for multi-environment release management and rollback strategy.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed and maintained RESTful APIs and mobile backends using Laravel and Python Flask, serving both internal apps and B2B integrations.
- Designed multi-tenant data models for SaaS products, enabling secure client data isolation in PostgreSQL and NoSQL backends.
- Built robust job queues with Beanstalk and Redis to offload high-latency email delivery and PDF generation tasks.
- Led performance optimization across queries and indexes, reducing average API response time from 380ms to under 150ms.
- Worked closely with QA to implement unit and integration test suites in PHPUnit and Postman for API validation.
- Refactored API documentation into self-hosted Swagger UI, improving integration time for new partners.
- Participated in technical planning with business analysts to ensure scalable architecture aligned with future hospitality API expansion.
- Maintained Docker-based local environments for team parity and smoother onboarding.

Software Developer
Decima Digital
November 2015 – April 2016
Tallinn, Estonia

- Supported Java and PHP integration development for ecommerce partners using REST APIs and XML feeds.
- Debugged complex third-party authentication and token issues via Charles Proxy and Postman.
- Built internal tooling in Python to simulate third-party API payloads and test fault tolerance of partner services.
- Helped onboard new resellers via workshops and API walkthroughs for logistics automation.
- Contributed to internal deployment automation for partner-facing services using Jenkins pipelines.
- Wrote detailed documentation for internal SDKs used by external partner integrations.
- Assisted senior developers in building secure webhook endpoints for asynchronous updates.
- Validated API compatibility between vendor-provided platforms and in-house microservices.

Software Developer Intern
Borna Technology
September 2014 – August 2015
Tallinn, Estonia (On-Site)

- Created proof-of-concept APIs in PHP for hotel guest experience integrations such as room automation and check-in systems.
- Wrote MySQL queries and performance-tuned indexes to enable smooth analytics for hospitality KPIs.
- Assisted in migrating legacy cron-based jobs to event-driven scheduling via RabbitMQ queues.
- Documented edge-case behaviors for API consumers based on legacy XML spec compatibility.
- Shadowed senior engineers during release planning and remote debugging sessions.
- Developed simple internal tools using Python for data imports from CSV and partner CRM systems.
- Created test cases for REST endpoints covering security, load, and error boundaries.
- Participated in remote daily standups and contributed to agile backlog grooming.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate (2023)
 - ❖ Google Cloud Associate Cloud Engineer (2024)
 - ❖ API Design and Fundamentals of Google Cloud's Apigee API Platform (Coursera – 2023)
 - ❖ Certified Kubernetes Application Developer (CKAD) – 2022
-

PROJECTS

- ✓ **Hospitality Partner Hub (2023)**
Led backend development for unified partner portal integrating external PMS, CRM, and property automation tools via REST/GraphQL APIs. Emphasized observability, retry logic, and scalable onboarding.
- ✓ **Event-Driven Booking Engine (2022)**
Architected microservices in Java using Spring Cloud and Kafka to support real-time room availability and pricing. Integrated with 10+ third-party vendors via async adapters and ensured SLA enforcement.
- ✓ **Multi-Cloud Infra Toolkit (2021)**
Created reusable Terraform modules to automate AWS and GCP provisioning for partner integrations. Enabled per-customer CI/CD and monitoring in under 30 minutes per setup.
