

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced and versatile Senior Software Engineer with 9+ years in backend development, cloud infrastructure, and system design. Proven expertise in building scalable applications using Java and Python, deploying cloud-native architectures on AWS, and automating infrastructure using Terraform and AWS CDK. Strong communicator and team player with a track record in Agile, remote-first environments. Committed to delivering high-performance, secure, and maintainable software solutions.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript, HTML5, CSS3, Bash
- **Frameworks:** Spring Boot, Flask, Django, Node.js, Express.js
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, ECS, IAM, CloudWatch), Terraform, AWS CDK, Docker, GitHub Actions, GitLab CI/CD
- **Tools:** Postman, JIRA, Confluence, VS Code, IntelliJ, PyCharm, Jenkins
- **Database:** PostgreSQL, MySQL, MongoDB, DynamoDB
- **Others:** REST APIs, Microservices, Git, Agile/Scrum, Serverless Architecture, Kubernetes (basic)

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and deployed microservices on AWS, utilizing EC2, ECS, and Lambda, improving platform scalability by 40% under peak traffic.
- Led the backend team in developing event-driven systems with Java Spring Boot and Python Flask, processing over 5 million transactions monthly.
- Built and maintained Infrastructure as Code using Terraform and AWS CDK, enabling consistent multi-region cloud deployments.
- Implemented CI/CD pipelines with GitHub Actions and AWS CodePipeline to ensure rapid, error-free releases and rollback capability.
- Integrated CloudWatch and custom logging to monitor and alert across distributed systems, reducing average issue resolution time by 30%.
- Mentored junior developers and coordinated cross-team code reviews, boosting team delivery quality and documentation standards.
- Drove optimization initiatives for serverless modules, reducing AWS Lambda cold-start times by 60% using provisioned concurrency.
- Conducted security assessments across services and IAM policies, leading to SOC 2 readiness and improved access control compliance.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Developed RESTful backend APIs in Python/Django for mobile and web clients, serving thousands of concurrent users.
- Built serverless pipelines on AWS for batch data processing, leveraging S3 triggers and Lambda integrations.
- Automated infrastructure provisioning for client projects using Terraform, reducing setup time from 2 days to under 1 hour.
- Contributed to CI/CD workflows using Jenkins and GitLab CI, enabling parallel deployment and rollback.
- Integrated with external marketing APIs, adding personalization features and dynamic content delivery for campaigns.
- Delivered comprehensive unit and integration test coverage, ensuring consistent quality across 12 microservices.
- Participated in daily Agile stand-ups and sprint planning, contributing to timely delivery across cross-functional remote teams.
- Implemented centralized logging and metrics using ELK stack for production monitoring and debugging.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Maintained and extended existing Java backend services with high availability and transactional safety.
- Collaborated on migration from monolith to microservice architecture, improving deployment speed and development parallelism.
- Wrote Python scripts for automating configuration and server maintenance tasks across testing environments.
- Assisted in developing APIs for IoT systems integrated into AWS services like SQS and DynamoDB.
- Utilized Docker containers in local development and testing, improving onboarding and consistency.
- Documented technical workflows and contributed to team knowledge base and architecture decisions.
- Coordinated closely with frontend engineers on API contracts and service integration timelines.
- Provided application support, analyzing and resolving bugs from multiple environments including staging and production.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Built internal tools in Python for data manipulation and ETL pipelines handling unstructured business data.
- Supported system integration tasks and contributed to the release cycle of multiple client deployments.
- Collaborated with cross-functional teams remotely to deliver features under tight timelines.

- Participated in code reviews and internal QA processes to ensure high delivery standards.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Developed data collection modules in Python for analytics dashboards.
 - Supported configuration management and wrote automation scripts for deployment.
 - Gained practical exposure to AWS services, helping configure EC2 environments and S3 backups.
 - Delivered internal documentation and participated in technical reviews under senior mentorship.
 - Assisted in bug tracking and verification using Jira and Git versioning tools.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Solutions Architect – Associate (*In Progress, expected Q3 2025*)
 - ❖ Terraform Associate Certification – HashiCorp
 - ❖ Java Spring Boot Microservices – Udemy / Pluralsight
 - ❖ Python for DevOps: Infrastructure Automation – LinkedIn Learning
-

PROJECTS

- ✓ **Cloud-native Monitoring Dashboard** – Built a full-stack AWS-hosted dashboard for monitoring cloud resources using Python, DynamoDB, and AWS Lambda; integrated with CloudWatch and SNS for alerting.
- ✓ **CI/CD Infrastructure Blueprint** – Created a reusable GitHub Actions + Terraform + CDK template for microservices deployment in multi-account AWS setups.
- ✓ **Serverless Data Ingestion Pipeline** – Architected a serverless ingestion system for JSON logs using AWS S3, Lambda, and Step Functions; processed over 100K logs/day.
