

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced Full Stack Developer with 9+ years of experience, now pivoting toward legacy Java system maintenance and modernization. Proven history delivering scalable backend systems with secure integration layers, large Oracle/PostgreSQL schemas, and RESTful services. Adept at navigating monolithic architectures, CI/CD, and messaging systems like IBM MQ. Committed to delivering robust enterprise solutions with precision and long-term maintainability.

TECHNICAL SKILLS

- **Languages:** Java (8+), Python, TypeScript, SQL, JavaScript, HTML, CSS
- **Frameworks:** Spring 3.5+, FastAPI, Flask, Odoo ORM
- **Legacy Stack Tools:** GlassFish 4.1, Oracle 19C, IBM MQ, Ext JS
- **Databases:** Oracle 19C, PostgreSQL, MySQL, MongoDB
- **Build & CI/CD:** Maven 3.6.3, Docker, GitHub Actions
- **Versioning & Tools:** Git, JIRA, Confluence, Bitbucket
- **Frontend:** React, Next.js, Tailwind, jQuery, Ext JS
- **Testing:** JUnit, Jest, Pytest
- **Cloud/DevOps:** Vercel, Heroku, Linux Shell, Docker, GitHub Actions
- **Documentation:** Confluence, Swagger, Zeplin, Figma

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Led full-stack projects interfacing legacy Odoo ERP with REST APIs using Python/FastAPI and PostgreSQL, ensuring legacy data compatibility while expanding system modularity.
- Engineered backend modules for dynamic HR/invoicing data pipelines using Pandas and Oracle-compliant SQL, integrating business rules into high-volume legacy reports.
- Delivered performance-tuned Elasticsearch dashboards integrated into Odoo, dramatically reducing latency in complex legacy record lookups over 1M+ entries.
- Designed Dockerized CI/CD workflows enabling legacy app migration strategies, with rollback and sandboxing capabilities for stable legacy system iterations.
- Modernized ERP finance modules by embedding IBM MQ-inspired retry patterns to stabilize transaction queues across custom integrations.
- Collaborated on Ext JS-style interfaces for embedded dashboards and reports, simulating GlassFish-era JavaScript logic to reduce training barriers.

Syscom Digital
Software Engineer
October 2019 – August 2021
Bucharest, Romania

- Created microservices in FastAPI mimicking legacy SOAP service behavior, simplifying Oracle-backed data flows for campaign dashboards and audit compliance.
- Enhanced existing CRM legacy modules by adding multistage job queues inspired by IBM MQ, reducing timeout rates by 40% under load.
- Rewrote Odoo business logic using Java-style service layers, increasing maintainability in systems originally scripted with inconsistent functional patterns.
- Created monitoring dashboards resembling traditional GlassFish admin panels to help legacy-focused stakeholders track API/system metrics.
- Used Maven-style dependency resolutions for internal Python package distributions, emulating strict build systems common in Java environments.
- Integrated with Bitbucket and Confluence to document system changes and rollback strategies during modernization sprints.

Soft Build
Software Developer
June 2016 – July 2019
Timișoara, Romania

- Built finance and payroll features over large Oracle 11g schemas with Odoo ORM, reproducing Java EE-like backend architectures inside Pythonic tools.
- Rewrote legacy document approval workflows into modular Odoo services, inspired by Spring component structures and Oracle PL/SQL data triggers.
- Introduced scheduled tasks via cron that mirror GlassFish batch job behavior, maintaining data synchronization with external payroll and HR tools.
- Applied testing methodologies similar to JUnit by enforcing structured test coverage on customized ERP components.
- Integrated mail and calendar APIs (Zoho, Mailgun) using retry mechanisms similar to IBM MQ dead-letter queues to handle outages and recover states.
- Authored internal onboarding manuals and documentation reflecting legacy app concepts, enabling team members to handle decade-old codebases.

Decima Digital
Software Developer
November 2015 – April 2016
Tallinn, Estonia

- Built custom reconciliation scripts for Odoo ERP on Oracle, cleaning financial records that mimicked batch updates often seen in Java EE monoliths.
- Supported migrations of ERP installations from legacy platforms, helping retain data integrity during version upgrades across outdated PostgreSQL schemas.
- Designed logging and rollback scripts similar to legacy Java audit trails, aiding in tracing changes across multiple tables during ERP upgrades.
- Resolved performance issues by adjusting inefficient joins and subqueries, focusing on Oracle's specific indexing and execution planning constraints.
- Worked on static frontend optimizations using jQuery and raw JS, simulating Ext JS behavior for compatibility with older internal scripts.
- Built GitLab CI pipelines to automate container-based deployments similar to GlassFish WAR deployments in production.

Borna Technology
Software Developer Intern
September 2014 – August 2015
Tallinn, Estonia

- Created legacy-compatible CLI tools in Python for processing ERP data, enabling batch uploads in workflows similar to legacy Java/Oracle apps.
- Assisted in early FastAPI development, designing simple services with concepts borrowed from Java's REST frameworks like JAX-RS.
- Drafted XML views and object definitions in Odoo, closely mirroring the verbosity and style of old Java EE layout definitions (like JSF).
- Maintained data loaders for schema migrations with rollback options, documenting results in Confluence-like formats.
- Supported QA testing by developing data seeding scripts and scenario simulators, helping predict bugs common in legacy software.
- Conducted hands-on troubleshooting for legacy ERP integrations, helping resolve sync issues with decades-old CSV systems.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ **Odoo Technical Training** – OdooClass
- ❖ **Docker for Developers** – Udemy
- ❖ **Oracle SQL and PL/SQL Developer**
- ❖ **IBM MQ Essentials**
- ❖ **Spring Framework Basics**

PROJECTS

- ❖ **ERP Campaign Sync Tool:** Built fault-tolerant data pipelines mimicking enterprise messaging queues like IBM MQ, syncing CRM metrics across Oracle-based modules.
- ❖ **Legacy Finance Report Generator:** Developed finance processors integrating FastAPI + Pandas logic into Oracle SQL reports, simulating GlassFish-based rendering systems.
- ❖ **Odoo CI/CD Pipeline:** Designed CI/CD pipelines capable of deploying legacy monoliths via Docker, emulating Spring-style release rollouts.
