

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Seasoned Full Stack Developer with over 9 years of experience building scalable, high-performance web applications and microservices across multiple industries. Proficient in Java 11+, Spring Boot, ReactJS, Kafka, Docker, and AWS/GCP environments. Proven track record in designing and implementing cloud-native architectures, event-driven systems, and real-time streaming solutions. Fluent in Italian and proficient in English, I bring deep technical expertise, agility, and reliability to remote freelance engagements.

TECHNICAL SKILLS

- **Languages:** Java (11+), JavaScript, TypeScript, SQL, HTML, CSS
- **Frameworks & Tools:** Spring Boot, Spring MVC, Spring Security, ReactJS, Redux, Node.js
- **Event Streaming:** Apache Kafka, RabbitMQ
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **DevOps & Cloud:** Docker, Kubernetes, AWS (EC2, RDS, Lambda), Azure, GCP, Git, GitLab CI/CD
- **Architecture:** Microservices, REST APIs, Event-driven systems
- **Testing & Quality:** JUnit, Mockito, Cypress, Postman, SonarQube
- **Other:** Agile/Scrum, Jira, Confluence

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Developed scalable microservices using Java 17 and Spring Boot deployed on AWS ECS, reducing latency and enabling dynamic workload distribution during high-traffic operations.
- Integrated Apache Kafka for real-time stream processing, resulting in a 40% improvement in transaction event throughput and enhanced asynchronous communication.
- Led front-end architecture redesign using ReactJS and Redux Toolkit, creating reusable components that boosted UI consistency and decreased development time by 30%.
- Orchestrated CI/CD pipelines using GitHub Actions and Docker, achieving zero-downtime deployments and automated integration testing across staging and production.
- Collaborated across teams to migrate monolithic services into microservices, improving system resilience and enabling independent scaling per service component.
- Designed and enforced data schema validations in PostgreSQL and MongoDB, ensuring data integrity and optimizing query performance through index tuning.

- Enhanced application security by implementing JWT-based authentication and fine-grained role-based access control using Spring Security.
- Mentored junior developers, conducted code reviews, and introduced Agile best practices that reduced bug frequency and sprint overrun incidents by 45%.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Built RESTful APIs and integrated client platforms using Spring Boot and Hibernate, facilitating robust back-end systems for marketing and campaign automation.
- Created high-performance dashboards with ReactJS, using hooks and memoization to reduce unnecessary renders and improve data visualizations.
- Implemented Redis-based caching layer to reduce redundant data fetches and API calls, cutting average response times by 50%.
- Developed modular Kafka consumer services to process customer analytics data and deliver real-time metrics and event logs to internal BI tools.
- Deployed containerized services using Docker and maintained staging pipelines via GitLab CI, automating integration testing and code linting.
- Integrated AWS S3 for media storage and retrieval, supporting scalable asset management across distributed systems.
- Optimized PostgreSQL queries and schema structures to reduce database load during peak marketing campaigns, ensuring consistent SLA compliance.
- Collaborated in cross-functional Agile teams to refine project requirements and deliver client-facing features on 2-week sprint cycles.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Engineered enterprise-grade APIs with Java 11 and Spring Boot that served as a backend backbone for logistics and order tracking systems.
- Designed and built front-end interfaces using ReactJS and Bootstrap, enabling real-time updates and responsive design on mobile and desktop platforms.
- Integrated messaging queues with Kafka and RabbitMQ for inter-service communication, streamlining real-time data propagation across modules.
- Implemented database replication and failover strategies in MySQL and PostgreSQL to ensure high availability for mission-critical services.
- Configured containerized dev environments using Docker Compose, simplifying onboarding and enabling consistent environment parity.
- Established logging and monitoring systems with ELK stack to capture system metrics and error traces, enabling proactive debugging and maintenance.
- Used OAuth2 with Spring Security for secure API access and third-party client integrations.
- Regularly delivered business-critical features with zero production bugs due to rigorous TDD and peer-reviewed deployments.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Built data-driven admin portals using Java Spring MVC and jQuery, facilitating analytics visibility and workflow tracking for retail operations.
- Automated form processing and validation for customer onboarding using Java and JSP, enhancing data accuracy and user interaction.
- Used Git branching strategies and Agile sprints to implement incremental product releases with minimal regression.
- Assisted in setting up Jenkins-based build pipelines for internal QA and deployment.
- Contributed to design discussions on transitioning from monolithic to layered architecture systems.
- Created REST API endpoints for mobile applications to sync offline data with the central database.
- Maintained clean codebase with strict adherence to SOLID and DRY principles for better maintainability.
- Participated in pair programming and sprint reviews to ensure code quality and shared understanding.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Contributed to internal tooling projects by developing form-driven interfaces using HTML, JavaScript, and PHP backend services.
- Worked alongside senior developers to implement PostgreSQL procedures for internal inventory management workflows.
- Refactored legacy code into modular components and documented the process to enable easier handoffs and updates.
- Shadowed architecture meetings to learn RESTful API design principles and software design patterns in real-world use.
- Built proof-of-concept integrations using SOAP services, learning both XML structuring and backward compatibility maintenance.
- Created test cases and debugged deployment issues in staging environments.
- Managed internal Wiki to centralize technical knowledge and maintain project artifacts.
- Supported UI enhancements based on stakeholder feedback and rapid iteration cycles.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ AWS Certified Developer – Associate
 - ❖ Java Spring Professional Developer – Pivotal
 - ❖ Confluent Certified Kafka Developer
 - ❖ Docker Essentials – IBM
 - ❖ MongoDB University Developer Certification
-

PROJECTS

✓ **EventSync Platform** – *Real-time Event Aggregator*

Designed and implemented a cloud-native Kafka + Spring Boot platform for ingesting and analyzing streaming events, used by multiple B2B clients for campaign tracking.

✓ **CloudForm CI Tool** – *DevOps Automation Service*

Created a Docker and GitLab-based deployment orchestrator to auto-build and test Java/React microservices, cutting deployment time by 60%.

✓ **E-Marketplace Backend Engine** – *Retail Service API*

Developed secure, scalable backend in Java 17 and PostgreSQL with full role-based access control, caching, and audit logging.
