

CRISTOFF STAN

Senior Software Developer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Experienced and versatile Senior Software Engineer with 9+ years of professional expertise in building secure, high-performance backend systems, distributed event pipelines, and scalable cloud-native applications. Passionate about leveraging Kotlin, Go, PostgreSQL, and GCP to design intelligent, context-aware platforms that drive developer productivity and ensure software security. Seeking to contribute to a forward-thinking team focused on transforming SDLC insights and security.

TECHNICAL SKILLS

- Languages:** Kotlin, Java, Go, TypeScript, Python, SQL
- Frameworks:** Spring Boot, Ktor, Svelte, RESTful APIs, gRPC
- Data & Storage:** PostgreSQL, Redis, OpenSearch, MariaDB
- Infrastructure & Tools:** Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, CircleCI, ArgoCD
- Cloud:** Google Cloud Platform (GCP), AWS
- Monitoring & Observability:** Prometheus, Grafana, OpenTelemetry
- CI/CD & DevOps:** Git, GitHub, Jenkins, Terraform, CircleCI
- Other:** Event-driven Architecture, Immutable Data, Secure Coding, SDLC, TDD, Microservices, Profiling (Linux/UNIX)

WORK EXPERIENCE

Sensidev

Senior Software Engineer

September 2021 – December 2024

Timișoara, Romania

- Designed and implemented a secure, event-driven microservice ecosystem using Kotlin and PostgreSQL, handling 10M+ monthly events with optimized throughput and latency.
- Led development of internal APIs and data ingestion pipelines, integrating Terraform-managed infrastructure across GCP.
- Built real-time event processors to identify anomalies, compliance violations, and code security signals using immutable event stores.
- Integrated OpenSearch-based indexing and query engines for instant retrieval of enriched development event metadata.
- Spearheaded GCP cloud automation and optimized data retention strategies using Terraform, reducing storage costs by 40%.
- Mentored junior engineers on scalable architecture patterns, Linux profiling techniques, and secure deployment practices.

- Developed IDE integration components and webhook services in Go to enhance developer tooling and software delivery pipelines.
- Reviewed architecture decisions, conducted profiling using UNIX tools, and implemented alerting dashboards via Grafana and Prometheus.

Syscom Digital

Software Engineer

October 2019 – August 2021

Bucharest, Romania

- Designed and deployed fault-tolerant backend services with Kotlin and MariaDB, focusing on compliance reporting and log auditing.
- Created performant RESTful APIs and webhook interfaces to automate data exchange across internal business systems.
- Utilized Docker and Kubernetes for containerization and orchestration of microservices in CI/CD pipelines.
- Integrated OpenTelemetry for observability and diagnostics within distributed systems.
- Built automated CI pipelines using GitHub Actions and Terraform for staging and production environments.
- Conducted extensive code reviews and implemented secure coding practices aligned with SDLC compliance.
- Supported deployment of containerized services on GCP and monitored via Prometheus/Grafana stack.
- Participated in Agile sprints and drove architectural improvements in event processing workflows.

Soft Build

Software Developer

June 2016 – July 2019

Timișoara, Romania

- Developed internal data tracking systems with Java and Spring Boot to process high-volume event logs across multiple endpoints.
- Implemented asynchronous background workers in Kotlin for event pipeline orchestration.
- Optimized query performance in PostgreSQL-based analytic dashboards with complex SQL indexing strategies.
- Maintained system security by enforcing TLS, OAuth2 and role-based access control.
- Built CLI tools and automation scripts in Python and Bash to support CI workflows and incident response.
- Orchestrated deployment pipelines via Jenkins and Docker Compose for local and cloud environments.
- Analyzed memory and CPU profiling reports in Linux to resolve bottlenecks in batch data processing jobs.
- Led internal hackathons and documentation initiatives around observability and data labeling pipelines.

Decima Digital

Software Developer

November 2015 – April 2016

Tallinn, Estonia

- Developed RESTful services using Spring Boot and Kotlin to manage secure client-side audit trails.
- Wrote unit and integration tests to validate business-critical features in a data-sensitive application.
- Created automated scripts to simulate high-frequency event ingestion and monitor system stability.
- Collaborated on deployment automation using Docker and shell scripts for staging clusters.

- Contributed to frontend Svelte components for alert notifications and developer metrics dashboards.
- Reviewed legacy code and helped modernize Java services into modular, containerized architecture.
- Tuned PostgreSQL queries and applied schema versioning using Flyway.
- Implemented Linux-based monitoring to track event persistence and processor throughput.

Borna Technology

Software Developer Intern

September 2014 – August 2015

Tallinn, Estonia

- Assisted in designing backend components using Java and PostgreSQL for analytics and reporting.
- Participated in developing compliance-related scripts to identify data inconsistencies.
- Integrated backend APIs with frontend Svelte visualizations of developer behavior patterns.
- Wrote shell scripts to automate development setup and test environments.
- Worked on log ingestion prototypes and data labeling tasks for quality verification.
- Supported DevOps engineers in containerizing monolithic Java applications using Docker.
- Documented system design choices and participated in knowledge-sharing sessions.
- Shadowed senior engineers to learn coding conventions and deployment procedures in CI/CD workflows.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- Google Cloud Professional Cloud Architect (Issued 2023)
- Certified Kotlin Developer – JetBrains (Issued 2022)
- Advanced PostgreSQL Performance Tuning (2023)
- Terraform Associate – HashiCorp (2024)

PROJECTS

- ✓ **Secure DevOps Event Store:** Designed a real-time SDLC event ingestion and processing platform using Go, Kotlin, PostgreSQL, and OpenSearch to track developer activity and detect policy violations.
- ✓ **Cloud-Native Alerting System:** Implemented a Kubernetes-native monitoring toolchain with Prometheus, Grafana, and custom alerting webhooks for pipeline observability.
- ✓ **CI/CD Policy Compliance Bot:** Built a GitHub bot with Go that analyzed CI logs and flagged security policy violations, supporting developers in early-stage defect remediation.
- ✓ **Immutable Data Pipeline Framework:** Developed an append-only pipeline system that enforces immutability and traceability for audit-compliant event streams.
